To implement the penalty for not maintaining the condition of NHS bridges under the NHPP, FHWA incorporated the minimum condition level for bridges on the NHS established by 23 U.S.C. 119(f)(2). The penalty is as follows: If FHWA determines for the 3-year period preceding the date of the determination, that more than 10.0 percent of the total deck area of bridges in the State on the NHS is located on bridges that have been classified as Structurally Deficient, then during the fiscal year following the determination, the State DOT shall obligate and set aside in an amount equal to 50 percent of funds apportioned to such State for fiscal year 2009 to carry out 23 U.S.C. 144 (as in effect the day before enactment of MAP–21) from amounts apportioned to a State for a fiscal year under 23 U.S.C. 104(b)(1) only for eligible projects on bridges on the NHS. The set-aside and obligation requirement shall remain in effect for each subsequent fiscal year until such time as less than 10 percent of the total deck area of bridges in the State on the NHS is located on bridges that have been classified as Structurally Deficient as determined by FHWA.

The ASCE, a private citizen (Nicholas Cazares), and Missouri DOT expressed support for this section.

The FHWA received various comments regarding the statutory provisions under the NHPP for the

penalty of not maintaining the condition of NHS bridges. The NYSAMPO and the State DOTs of Rhode Island and Texas argued that the implementation of a penalty to maintain a minimum condition is inconsistent with the principles of asset management. They argued that the penalty would promote a “worst-first” philosophy, delay the achievement of a state of good repair, and distort a State DOT’s ability to properly invest. Additionally, the New York DOT suggested eliminating the penalty. The Connecticut DOT argued that the 10 percent threshold and 50 percent formula amount for the structurally deficient classification and the set-aside are arbitrary. They commented that the penalty provisions appear “to have no basis in engineering principles or generally accepted asset management practices.” Similarly, ASCE endorsed a goal of 8 percent instead of 10 percent. The Oregon and Texas DOTs suggested an alternative to the set-aside penalty. They suggested that a State DOT submit to FHWA an investment plan to reduce the percentage of deck area of bridges on the NHS classified as structurally deficient. The SCAG suggested that the penalty provisions should not be implemented without the apportionment of additional funds to locals because the penalty imposed on a State DOT would in turn reduce the availability of Federal funds for locals.

The FHWA essentially incorporated the minimum condition level for bridges on the NHS into the final rule consistent with 23 U.S.C. 119(f)(2). The MAP–21 did not provide FHWA the authority to eliminate the penalty provisions or change the threshold for structurally deficient or the set-aside amount.

Three State DOTs (Colorado, Connecticut, and New York) and AASHTO argued that October 1, 2016, the initial date of determination of compliance with the minimum condition requirements specified in 23 U.S.C. 119(f)(2), is “too soon” and “State DOTs will have no time to assess their current situation and then implement reasonable projects to attempt to affect their meeting the 10 percent threshold.”

The MAP–21 and 23 U.S.C. 119(f)(2) have been in effect since July 6, 2012. The FHWA provided guidance ahead of the NPRM on the provisions of 23 U.S.C. 119(f)(2) and its implementation on September 25, 2012. In implementing the 23 U.S.C. 119(f)(2) provisions, the NPRM proposed a definition and computation for the classification of structurally deficient that was unchanged from the programmatic term that was used for

over 30 years to administer the Highway Bridge Program. Bridge owners have been aware and knowledgeable of this well-established classification of structurally deficient, which was one of three statuses used to determine eligibility and apportion funds to State DOTs from the Highway Bridge Program. The initial date of determination proposed in the NPRM provides more than 3 years for owners of NHS bridges to assess the condition of their bridges and implement projects in response to a possible penalty. This was based on data Federal agencies, State DOTs, and tribal governments were already collecting and submitting to FHWA for inclusion into the NBI and for a classification that has been well-known for decades.

However, FHWA revised NPRM implementing the statutory provisions of 23 U.S.C. 119(f)(2) in response to the comments. The revisions were also made due to the revisions to the definition and computation of the classification of structurally deficient and the new methods of calculation for the deck area of culverts and border bridges. In sections 490.405, 490.411(b), and 490.411(c), FHWA provides a transition period for implementing the statutory provisions under the NHPP for the penalty of not maintaining the condition of NHS bridges. This transition period provides State DOTs and MPOs additional time to adjust to the revised definition and computation for the classification of structurally deficient and the new calculations for deck area of culverts and border bridges. Initially, the statutory provisions will be implemented using the historical definition and method of determination for the classification of structurally deficient as used under the Highway Bridge Program, as proposed in the NPRM. Beginning in calendar year 2018 (*i.e.*, the NBI submittal for March 15, 2018), the statutory provisions will be implemented with the revised definition and computation for the classification of structurally deficient and the new methods of calculations for the deck area of culverts and border bridges.

The Mississippi and North Dakota DOTs argued that States should not be responsible for assets that are beyond their control and therefore not incur any penalties that may be due to those assets' conditions.

As discussed previously, FHWA recognizes that there is a limit to the direct impact State DOTs and the MPOs can have on performance outcomes within State and the metropolitan planning area, respectively. However, there is no such limit on the use of NHPP funds for any highway bridge that

is on the NHS. Recipients of NHPP apportionments (*i.e.*, State DOTs) can provide other owners of bridges on the NHS with NHPP funds (and Surface Transportation Block Grant Program funds) to improve the condition of bridges. Therefore, FHWA encourages State DOTs to consult and coordinate with relevant entities (*e.g.*, Federal land Management agencies, MPOs, local transportation agencies, and tribal governments) as they report performance data and establish targets. This will allow the State DOTs to better assess condition of bridges on the NHS and better identify and consider factors outside of their direct control that could impact future condition/performance. (See the previous discussion of responsibility for the reporting of data, establishment of targets, asset condition, and managing of assets that are beyond the control of State DOTs and MPOs and the discussion of ownership in the discussion section for section 490.105(d).)

The FHWA retains the language in section 490.413 as the statutory language in 23 U.S.C. 119 clearly identifies State DOT's apportionment under 23 U.S.C. 104(b)(1) when implementing the penalty. Because the statutory language does not provide that the terms "National Highway System" or "States," as used in this provision, mean anything different than the terms as defined in 23 U.S.C. 101(a)(15) and 23 U.S.C. 101(a)(25). The Missouri DOT requested clarification on the 3-year-period preceding the date of the determination. The determination of compliance with the minimum condition requirements specified in 23 U.S.C. 119(f)(2) would be carried out by FHWA for fiscal year 2017 and annually thereafter. The timing is based on an assessment of minimum condition compliance of NBI data submitted in 2014, 2015, and 2016. If for each of those years the percentage deck area of bridges on the NHS classified as structurally deficient is greater than 10.0 (*e.g.*, 12.5, 11.3, and 10.5), then the penalty would be assessed for fiscal year 2017 and annually thereafter until the percentage is less than 10.0.

VII. Rulemaking Analyses and Notices

The FHWA considered all comments received before the close of business on the extended comment closing date indicated above. The comments are available for examination in the docket (FHWA–2013–0053) at www.regulations.gov. The FHWA also considered comments received after the comment closing date to the extent practicable.

Responses to Public Comments on the NPRM's Regulatory Impact Analysis

The FHWA carefully considered the comments related to: (1) Underestimated costs; (2) alternate cost estimates; (3) the cost for processing additional cracking data and maintaining a data quality management program; (4) the cost of IRI-only data collection on the non-Interstate NHS; (5) the cost of historical pavement condition performance management practices; (6) estimating the cost of establishing performance targets with incomplete knowledge about the availability of tools; (7) understated benefits; (8) the need for a quantitative analysis; (9) unfunded mandates; (10) Americans with Disabilities Act (ADA) issues; and (11) right-of-way (ROW) issues. The FHWA's responses to these comments are discussed below.

Agile Assets Corporation, NYMTC, TEMPO, Transportation for America, and the State DOTs of Michigan, Mississippi, North Carolina, and Oregon commented that FHWA may have underestimated the costs of the proposed rule.

The FHWA reviewed the process used to estimate costs. To develop estimates of the costs of the proposed rule, FHWA interviewed Federal, State, and local practitioners and SMEs. The FHWA researched existing literature on bridge and pavement condition, and reviewed Federal and State agency Web sites for information on current bridge and pavement condition data collection and reporting practices. In the final rule, FHWA retains the NPRM's methodology and assumptions, which are listed in Section 3 and described in detail in Section 4 of the final rule's RIA. The original and updated RIA can be found in the docket for this rulemaking. The estimated level of effort and costs to comply with the rule represent nationwide estimates of current practices as derived from interviews with Federal, State, and local practitioners. Therefore, these estimates represent average costs for a State DOT. The FHWA understands that the actual costs incurred may be higher for some State DOTs and MPOs, and lower for others.

The Michigan and Oregon DOTs provided alternative estimates for the costs they argue were underestimated in the NPRM. Oregon DOT commented that one additional full-time employee would be needed for pavement data collection as a result of the rule, at an incremental cost of \$150,000 per year. Michigan DOT argued that data collection costs would increase by \$100,000 per year. Michigan DOT also

asserted that processing additional cracking data and maintaining a data quality management program would potentially double current costs but did not provide an estimate.

The FHWA compared its estimated costs from the NPRM to the estimates provided by the commenters. The FHWA estimated that the cost to collect data on the Interstate and non-Interstate would be approximately \$97,000 per State DOT per year (see Sections 4.2.1 and 4.2.3 of the final RIA). After additional consultation with SMEs, FHWA revised the final rule's RIA to a cost of \$150,000 per State DOT per year for data collection as recommended by commenters and SMEs.

In response to Michigan DOT's comments on the costs for processing additional cracking data and maintaining a data quality management program, FHWA reviewed the process used to estimate the cost. In the NPRM, FHWA estimated that a State DOT would incur costs of approximately \$37,000 per year for a new cracking data collection program (see Sections 4.2.2 and 4.2.4 of the RIA). In addition, FHWA estimated new quality management programs would cost a State DOT approximately \$62,000 per year, while upgrading an existing program would cost approximately \$31,000 per year (see Section 4.2.7 of the RIA). In the final rule RIA, FHWA maintains these assumptions.

Mississippi DOT commented that the NPRM RIA incorrectly assumed that the costs of IRI-only data collection on the non-Interstate NHS would be offset by efficiencies in other areas. The FHWA reexamined and confirmed the estimated costs of IRI-only data collection on the non-Interstate NHS as presented in Section 4.2.3 of the RIA. Therefore, FHWA did not revise this portion of the RIA for the final rule.

AgileAssets Corporation commented that agencies would continue to use their historical pavement condition performance management practices in addition to new requirements in the NPRM. They also argued that State DOTs would incur additional costs associated with historical pavement condition performance management practices. The FHWA reviewed the analytical approach used in the RIA. The FHWA prepared the NPRM's RIA in accordance with the guidance provided in OMB Circular A-4, "Regulatory Analysis." As such, the analysis accounts for the incremental costs of the rule; that is, those costs incurred above and beyond the costs in the absence of the rule. As discussed in Section 4.1.2 of the NPRM's RIA, FHWA estimated that State DOTs would incur \$53

million for reporting on the new performance measures. Therefore, the RIA costs are maintained for this final rule.

Michigan DOT commented that estimating the cost to establish performance targets with incomplete knowledge about the availability of analytical tools to determine achievable levels of performance would be costly to develop if State DOTs did not already have them.

The FHWA notes that the requirements of this performance measure rule do not explicitly require tools to analyze alternative investment strategies and decisionmaking.¹⁰⁹ Therefore FHWA did not account for them.

A private citizen (Nicholas Cazares) commented that benefits were understated in the NPRM's RIA, as it does not account for the benefits to local economies that will be derived from improvements in transportation. Specifically, Mr. Cazares cited faster commutes due to widened roads or the construction of new bridges (*e.g.*, reduced travel delays and CO₂ emissions). "The California DOT noted the benefits of pavement preservation efforts. The commenter remarked that preservation efforts extend the life of assets in Good and Fair condition and would reduce the number of pavements in the Poor condition category."

The FHWA disagrees that the benefits were understated in the NPRM's RIA. The benefits were estimated based on a break-even analysis. The non-quantifiable benefits derived from the implementation of the rule could include improved pavement and bridge conditions, which would result in improved traffic flow. In the benefits analysis for the NPRM, FHWA also acknowledged that there may be many non-quantitative benefits derived from the implementation of the rule, such as time savings that would result from trucks no longer having to be rerouted from bridges with severe weight restrictions (see Section 5 of the RIA) and reduced traffic and emissions in the RIA for the third performance measure rulemaking (docket number FHWA-2013-0054).

The FHWA reviewed the approach taken in the NPRM's RIA. In the NPRM, FHWA prepared break-even analyses to quantify the benefits of the rulemaking. The break-even analyses provided estimates of the thresholds that must be reached in order for the rule to be cost-

beneficial, an approach endorsed by OMB Circular A-4. The FHWA determined that this approach, rather than a quantifiable approach, is appropriate for evaluating the costs of the rule. For more information on the break-even analyses, agencies should refer to the benefits discussion later in this section, or Section 5 of the RIA document on this docket.

The Mississippi DOT and an anonymous commenter questioned the unfunded mandates aspect of the rulemaking. Specifically, Mississippi DOT disagreed with FHWA's determination that the rule was not an unfunded mandate.

In the final rule, FHWA did not change its determination that the rule is not an unfunded mandate. According to the Unfunded Mandates Reform Act of 1995 (UMRA) (Pub. L. 104-4, 109 Stat. 48), a rule would contain an unfunded mandate if any of its requirements result in expenditures of \$151 million or more in any 1 year for either State, local, or tribal governments, in the aggregate, or by the private sector (See the discussion on UMRA in Section VII, Rulemaking Analyses and Notices, of this document). The costs in the NPRM did not meet this threshold.

An anonymous citizen argued that repaving and certain pavement maintenance activities would require bringing facilities in conformance with the ADA. The commenter argued that since the ADA, ROW, and facility upgrade costs were omitted from the cost analysis, the costs of the rule were underestimated. The commenter also warned that upgrades to bring the pavements into conformance with ADA, and the related costs, may result in the taking of private property under Executive Order (E.O.) 12630 and may violate UMRA.

The FHWA notes that the NPRM required agencies to report on the condition of pavement. The methods used for pavement maintenance are not expected to change as a result of the rule. Therefore, costs related to ADA or ROW issues, such as those called for in 23 CFR 625.4 and 49 CFR 37.9, are outside the scope of the rule, and would not have taking implications under E.O. 12630 or violate UMRA. Furthermore, current practices regarding upgrading facilities are routinely subject to efficiency determinations that qualify for exemptions on a case-by-case basis, as described in 23 CFR 625.3. The current requirements for upgrading facilities or exception practices are not impacted by the implementation of this rule.

Executive Order 12866 (Regulatory Planning and Review), Executive Order

¹⁰⁹ For more discussion on planned activities, please see the section "Suggestions for how FHWA can best assist States and MPOs to maximize opportunities for successful implementation of the proposed performance measures."

13563 (Improving Regulation and Regulatory Review), and Departments of Transportation Regulatory Policies and Procedures.

The FHWA determined that this final rule constitutes an economically significant regulatory action within the meaning of E.O. 12866 and DOT regulatory policies and procedures. This action complies with E.O.s 12866 and 13563. This action is considered “economically significant” because this rulemaking will result in the transformation of the Federal-aid highway program so that the program focuses on national goals, provides for a greater level of accountability and transparency, and provides a means for the most efficient investment of Federal transportation funds. The FHWA completed an RIA in support of the final rule. The RIA estimated the economic impact, in terms of costs and benefits, on Federal, State, and local governments and private entities regulated under this action, as required by E.O.s 12866 and 13563. However, the RIA did not attempt to directly quantify the changes from the improved decisionmaking. The economic impacts are measured on an incremental basis, relative to current pavement and bridge condition reporting practices.

The RIA identified the estimated costs and benefits resulting from the final rule in order to inform policymakers and the public of its relative value. The complete RIA may be accessed from the

docket (docket number FHWA–2013–0053).

The cornerstone of MAP–21’s highway program transformation is the transition to a performance-based program. The MAP–21 requires State DOTs to invest resources in projects to meet or make significant progress toward meeting performance targets that will make progress toward national goals. The national performance goal area established for infrastructure condition is to maintain the highway infrastructure asset system in a state of good repair. In order to carry out this mandate, MAP–21 requires FHWA to promulgate a rule to establish pavement and bridge condition performance measures and standards. As required by MAP–21, the final rule identifies the following pavement and bridge performance measures for which State DOTs and MPOs must collect and report data, establish targets for performance, and make progress toward achievement of targets:

1. Percentage of lane miles of the Interstate System in Good condition;
2. Percentage of lane miles of the Interstate System in Poor condition;
3. Percentage of lane miles of the non-Interstate NHS in Good condition;
4. Percentage of lane-miles of the non-Interstate NHS in Poor condition;
5. Percentage of NHS bridges classified as in Good condition; and
6. Percentage of NHS bridges classified as in Poor condition.

Estimated Cost of the Final Rule

To estimate costs, FHWA assessed the level of effort, expressed in labor hours and categories, and the capital needed to comply with each component of the final rule. Level of effort by labor category is monetized with loaded wage rates to estimate total costs.

Table 4 displays the total cost of the final rule for the 10-year study period (2016–2025). Total costs are estimated to be \$156.0 million undiscounted, \$120.1 million discounted at 7 percent, and \$138.5 million discounted at 3 percent. The costs in the table assume that approximately half of the estimated 409 MPOs will establish their own targets, and the rest would adopt State DOT targets. It is assumed that State DOTs and MPOs serving Transportation Management Areas (TMA)¹¹⁰ will use staff to establish performance targets. Conversely, it is assumed that MPOs not serving a TMA will agree to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets. Therefore, they will not incur any incremental costs. There are currently an estimated 201 MPOs serving TMAs.¹¹¹ The FHWA made this assumption because larger MPOs may have more resources available to develop performance targets. The FHWA believes that this is a conservative estimate, as larger MPOs may elect not to establish their own targets for a variety of reasons, including resource availability.

TABLE 4—TOTAL COST OF THE FINAL RULE

Cost components	10-yr total cost		
	Undiscounted	7%	3%
Section 490.105–109—General Information, Target Establishment, Reporting on Progress, and Making Significant Progress	\$74,095,514	\$51,535,918	\$63,073,229
Coordination between State DOTs and MPOs	867,367	867,367	867,367
Establish and Update Performance Targets	31,750,717	22,897,706	27,448,308
Assess Significant Progress Toward Achieving Performance Targets	40,693,075	27,281,269	34,119,523
Reporting on Performance Targets Progress	784,356	489,576	638,032
Section 490.309—Data Requirements—Interstate IRI, Rutting, and Faulting	5,108,641	3,839,263	4,488,508
Tracking costs: Establish measurement for rutting	523,963	393,771	460,360
Tracking costs: Establish measurement for faulting	1,047,926	787,541	920,720
Data processing costs: Additional rutting data	1,964,862	1,476,639	1,726,349
Data processing costs: Additional faulting data	1,571,890	1,181,312	1,381,079
Section 490.309—Data Requirements—Interstate Cracking	16,259,029	12,671,493	14,506,400
Fully Automated State DOTs: Additional Data Quality Control Costs	1,309,908	984,426	1,150,899
Semi-Automated State DOTs: Additional Data Processing & Quality Control Costs	4,286,328	3,221,275	3,766,014
Manual & State DOTs not currently collecting: Training costs to adopt automated methods	1,820,915	1,820,915	1,820,915
Manual & State DOTs not currently collecting: Data quality control costs	8,841,879	6,644,877	7,768,571
Section 490.309—Data Requirements—Non-Interstate NHS IRI, Rutting, and Faulting	6,203,492	4,473,781	5,362,882
Data Collection costs: Increase IRI Measurement to Cover 100 percent of non-Interstate NHS miles	618,044	445,716	534,296
Data processing costs: Additional rutting and faulting data collected	681,152	491,227	588,852

¹¹⁰ A TMA is an urbanized area having a population of over 200,000 or otherwise requested by the Governor and the MPO and officially designated by FHWA or FTA. 23 U.S.C. 134(k).

¹¹¹ The FHWA updated the estimated total number of MPOs to 409, which is less than the 420

MPOs used at the time that the NPRM was published. The estimated number of MPOs serving TMAs is now 201, less than the estimate of 210 in the NPRM. At the time the RIA was prepared for the NPRM, FHWA assumed that the 36 new urbanized areas resulting from the 2010 Census

would have MPOs designated for them. In reality, some of the newly designated urbanized areas merged with existing MPOs, resulting in the designation of fewer new MPOs than expected.

TABLE 4—TOTAL COST OF THE FINAL RULE—Continued

Cost components	10-yr total cost		
	Undiscounted	7%	3%
Tracking costs: Establish measurement for rutting	2,724,609	1,964,910	2,355,408

Develop a Quality Management Program	45,688	45,688	45,688
Run New Quality Management Program	3,274,770	2,461,066	2,877,249
Improve Quality Management Program	13,754,034	10,336,476	12,084,444
Section 490.407—Calculation of bridge performance measures	6,883,091	6,792,272	6,838,723
Update Software to generate Good/Fair/Poor condition	6,517,588	6,517,588	6,517,588
FHWA's Management of Data Submissions	365,503	274,684	321,135
Total Cost of Final Rule	155,979,715	120,109,737	138,462,355

The final rule's 10-year undiscounted cost (\$156.0 million in 2014 dollars) decreased relative to the proposed rule (\$196.4 million in 2012 dollars). As discussed below, FHWA made a number of changes that affected cost.

General Updates

In the final rule RIA, FHWA updated all costs to 2014 dollars from the 2012 dollars used in the proposed rule RIA. In addition, FHWA updated labor costs to reflect current BLS data. These general updates increased the estimated cost of the final rule relative to the proposed rule.

The FHWA deferred the effective date from 2015 to 2016. All costs that related to activities that were scheduled to begin in 2015 will now begin in 2016. Furthermore, the start dates for the performance period, reporting cycles, and phase-in requirements will be delayed by 2 years, with the first performance period beginning in 2018 rather than 2016. The data requirements for non-Interstate NHS IRI, rutting, faulting, and cracking will be deferred 1 year to 2019. The deferment decreased the number of years State DOTs and MPOs will incur costs within the 10-year analysis period. Therefore, the estimated costs that State DOTs and MPOs will incur to comply with the requirements of this final rule have decreased relative to the proposed rule.

The FHWA also updated the estimated total number of MPOs to 409, which is less than the 420 MPOs used at the time that the NPRM was published. The estimated number of MPOs serving TMAs is now 201, less

than the estimate of 210 in the NPRM. The number of non-TMA MPOs is 208, less than the estimate of 210 in the NPRM. At the time the RIA was prepared for the NPRM, FHWA assumed that the 36 new urbanized areas resulting from the 2010 Census would have MPOs designated for them. However, some of these newly designated urbanized areas merged with existing MPOs, resulting in the designation of fewer new MPOs than expected. The FHWA estimates that, on average, only the 201 larger MPOs serving TMAs will establish their own quantifiable performance targets. The FHWA also estimates that the 208 smaller MPOs serving non-TMAs will choose to agree to plan and program projects so that they contribute toward the accomplishment of State DOT pavement and bridge condition-related performance targets. Therefore, only the 201 larger MPOs serving TMAs will incur costs to reprogram and upgrade their software to be able to perform calculations of the performance measures. The reduction in the number of MPOs decreased the estimated costs to comply with the requirements of the final rule relative to the proposed rule.

Comments on Costs and Benefits in the Regulatory Impact Analysis

A number of State DOTs and MPOs took issue with the assumptions and levels of cost analysis associated with the requirements of the NPRM reflected in the benefit-cost analysis.¹¹² In terms

of benefits, Fugro Roadware, a firm that manufactures and operates equipment that is used to measure the pavement conditions on State and municipal networks, asserted that the "entire pavement and traffic assessment management process has been shown to improve the quality of road networks without an overall increase of funding . . ."

Need for Quantitative Analysis

The Colorado DOT argued that FHWA did not adequately justify its statement that benefits would outweigh the costs. They urged FHWA to conduct a quantitative analysis to support its claim.

This rulemaking constitutes a change to Federal regulations and was therefore subjected to an economic analyses according to E.O. 12866, (Regulatory Planning and Review) (58 FR 51735), as supplemented by E.O. 13563 (Improving Regulation and Regulatory Review) (76 FR 3821). These E.O.s direct each Federal agency to propose or adopt a regulation only upon a reasoned determination that the benefits of the intended regulation justify its costs. The FHWA completed and included an RIA in support of this final rule on the establishment of national performance management measures for pavement and bridge conditions. The RIA summary estimates the economic impact, in terms of costs and benefits, on Federal, State, and local governments and private entities regulated under this

¹¹² TEMPO, Atlanta Regional Commission, Transportation for America, and State DOTs of

Colorado, North Carolina, Mississippi, Oklahoma, Michigan, Georgia, Louisiana, and Oregon.

action, as required by E.O.s 12866 and 13563. The economic impacts are measured on an incremental basis, relative to current highway infrastructure condition performance reporting practices. To estimate costs for the rule, FHWA assessed the level of effort, expressed in labor hours and categories, and the capital investments needed to comply with each component of the rule. Level of effort by labor category is monetized with loaded wage rates to estimate total costs. These estimates were developed with input from State and MPO interviews. This document presents the summary of the analysis. The complete quantitative analysis can be found in the docket.

Section 490.105 Through 109 General Information, Target Establishment, Reporting on Progress, and Making Significant Progress

The RIA estimates the cost of coordination between State DOTs and MPOs, establishing and updating performance targets, reporting on performance targets progress, and assessing significant progress toward achieving performance targets under sections 490.105 through 490.109. The cost of these sections decreased from \$93.3 million for the proposed rule to \$74.1 million for the final rule. In addition to the general updates described above, the decrease in cost is partially offset by the additional costs of coordinating the establishment of targets in accordance with 23 CFR part 450.

Section 490.309 Data Requirements: Interstate IRI, Rutting, and Faulting

The RIA estimates the cost of data requirements for Interstate IRI, rutting, and faulting under section 490.309. The cost of this section decreased from \$30.7 million for the proposed rule to \$5.1 million for the final rule. In addition to

the general updates described above, the decrease in costs is attributable to FHWA's response to public comments on the burden associated with pavement data collection requirements. In response to public comment, FHWA relaxed the proposed requirement that would have required State DOTs to collect IRI data both directions. The final rule requires IRI data collection in at least one direction, which results in lower data collection costs.

Break-Even Analysis

Currently, State DOTs differ in the way they measure the condition of their pavement. The FHWA does not believe their current methods are inadequate, but they are inconsistent. The differences hinder accurate analysis of infrastructure conditions at the national level. The final rule establishes uniform condition measures for the purpose of carrying out the NHPP to assess condition of pavements on the NHS (excluding the Interstate System), pavements on the Interstate System, and bridges carrying the NHS, which includes on- and off-ramps, connected to the NHS. In addition, the final rule establishes processes that: (1) State DOTs and MPOs use to report measures and establish performance targets and (2) FHWA uses to assess progress that State DOTs have made toward achieving targets.

The FHWA expects that the final rule will result in certain benefits. The final rule will yield greater accountability because the MAP-21-mandated reporting will increase visibility and transparency. In addition, the rule will help focus the Federal-aid highway program on achieving balanced performance outcomes.

These benefits resulting from the rule (*i.e.*, greater accountability and greater

focus on making progress toward the national goal for infrastructure condition) will lead to improved pavement and bridge conditions. The benefits resulting from performance measurement, while real and substantial, are difficult to quantify. Therefore, FHWA quantified these benefits of the rule by performing break-even analyses, as described in OMB Circular A-4. A break-even analysis calculates the threshold a specific variable must achieve in order for benefits to equal costs, holding every other variable in the analysis constant. For pavements and bridges, FHWA focused its break-even analyses on VOC savings because users typically garner the greatest concentration of benefits from transportation projects. The FHWA estimated the number of road miles of deficient pavement that will have to be improved and the number of posted bridges that will have to be avoided in order for the benefits of the rule to justify the costs.

Table 5 presents the results from the pavement break-even analysis. The results represent the savings in VOC to automobile and truck drivers from pavement conditions that are improved from Poor to Good. The analysis shows that the rule will need to result in the net improvement of approximately 71 miles of pavement (*i.e.*, to Good condition) per year, or 710 miles over 10 years, that will otherwise not have been improved without the rule.¹¹³ The annual break-even point represents approximately 0.3 percent of the NHS miles currently estimated to be in Poor condition. Based on recent trends in improving road condition, FHWA believes 71 miles of pavement per year or 710 miles over 10 years as a result of this rule is achievable.

TABLE 5—BREAK-EVEN IMPROVEMENT OF PAVEMENT CONDITIONS

[Improved from poor]

Annual improved VMT from poor needed	Annual poor VMT (total VMT * 11.8%)	Percent of poor VMT needing improvement	Current NHS miles estimated to be in poor condition	Approximate number of annual poor NHS miles needing improvement from poor
a	b	c = a ÷ b	d	e = c * d
562,187,982	193,346,999,390	0.29%	24,386	71

* Please refer to the Summary Report for details on the methodology used in the analysis.

¹¹³ The estimated annual break-even point accounts for the benefit in the year the improvement is made. Although the benefit from improved pavement will extend over multiple

years, the benefit declines year-to-year as the condition of the pavement declines. So, for the purposes of the analysis, we assume that 71 miles of poor pavement will need to be improved per year

in order for the rule to break even (rather than 71 miles total over the 10-year period).

Table 6 presents the results from the bridge break-even analysis, which calculates the number of year-long bridge postings that will need to be reduced as a result of the rule in order for the benefits of the bridge condition requirements to justify the costs. The FHWA estimated the average cost per year of a bridge posting in column E. With the undiscounted cost of the bridge requirements and this average cost of a bridge posting, the analysis estimates the number of year-long

bridge postings that need to be avoided in order to make the benefits of the rule justify the cost. The break-even analysis estimates that three separate 1-year long bridge postings need to be avoided over 10 years in order for benefits to justify costs.

As a basis for comparison, NBI data indicate that there were approximately 85 year-long NHS bridge postings for trucks in 2012. Over the 10-year period of 2003–2012, the number of NHS bridges posted for trucks declined from

145 to 85. Trends in the United States, demonstrated by bridge owners, provide evidence that posted bridges receive priority consideration in work schedules. With the increased performance requirements of the final rule, it is reasonable to assume that, at a minimum, a reduction in the posted load limit of one bridge annually nationwide would be achieved to provide the needed benefit to justify the costs of complying with this rule.

TABLE 6—BREAK-EVEN BRIDGE DETOURS

Undiscounted 10-year cost of bridge rule	Average truck user cost per VMT	Average distance per detour (miles)	Average cost of detour per trucks	Average cost per year of each bridge posting	Equivalent number of year-long posts that need to be avoided	Annual number of year-long posts that need to be avoided
a	b	c	d = b × c	e = d * 2,301 ADT * 365.25	f = a ÷ e	g = f ÷ 10 years
\$43,930,849	\$1.90	11	\$19.86	\$16,692,683	3	0.3

* Please refer to the Summary Report for details on the methodology used in the analysis.

Relative to the proposed rule, the threshold for the pavement break-even analysis decreased in the final rule. Specifically, the number of NHS miles in Poor condition needing improvement to Fair condition decreased from 435 to 71 in the final rule. The break-even point decreased due to an adjustment to the incremental maintenance and repair cost per VMT, a decrease in the undiscounted 10-year cost of the pavement rule, and an increase in the total VMT that are in Poor condition.

The threshold for the bridge break-even analysis increased in the final rule relative to the proposed rule. Specifically, the number of 1-year long bridge postings that need to be reduced increased from 2 to 3 in the final rule. The break-even point increased due to the following updates to input data:

- The average detour for bridges posted with weight limits of at least 40 percent below the legal load decreased from 20 miles to 10.45 miles, and
- The percentage of trucks of total average annual daily traffic on posted bridges decreased from 12.6 percent to 9.7 percent.

Regulatory Flexibility Act

To comply with the Regulatory Flexibility Act (Pub. L. 96–354, 5 U.S.C. 601–612), FHWA evaluated the effects of this action and determined that it would not have a significant economic impact on a substantial number of small entities. The rule affects State governments and MPOs. State DOTs are not included in the definition of small entity in 5 U.S.C. 601.

The MPOs are considered governmental jurisdictions. The small entity standard for these entities is whether the affected MPOs serve less than 50,000 people. The MPOs impacted by this rule serve urbanized areas with populations of more than 50,000. Therefore, MPOs that incur economic impacts under this rule do not meet the definition of a small entity.

The FHWA certifies that this regulatory action would not have a significant economic impact on a substantial number of small entities.

Unfunded Mandates Reform Act of 1995

The FHWA determined that this final rule would not impose unfunded mandates as defined by the UMRA. This rule does not contain a Federal mandate that may result in expenditures of \$151 million or more in any 1 year (2 U.S.C. 1532) for either State, local, and tribal governments in the aggregate, or by the private sector. Additionally, the definition of “Federal mandate” in UMRA excludes financial assistance of the type in which State, local, or tribal governments have authority to adjust their participation in the program in accordance with changes made in the program by the Federal Government. The Federal-aid highway program permits this type of flexibility.

Executive Order 13132 (Federalism Assessment)

The FHWA analyzed this final rule in accordance with the principles and criteria contained in E.O. 13132. The FHWA determined that this action would not have sufficient federalism

implications to warrant the preparation of a federalism assessment. The FHWA has also determined that this rule would not preempt any State law or regulation or affect the States’ ability to discharge traditional State governmental functions.

Executive Order 12372 (Intergovernmental Review)

The regulations implementing E.O. 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program. This E.O. applies because State and local governments would be directly affected by the proposed regulation, which is a condition on Federal-aid highway funding. Local entities should refer to the Catalog of Federal Domestic Assistance Program Number 20.205 (Highway Planning and Construction) for further information.

Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501, *et seq.*), Federal agencies must obtain approval from OMB prior to conducting or sponsoring a collection of information. The FHWA analyzed this final rule and determined that it contains collection of information requirements for the purposes of the PRA.

The final rule provides definitions and outlines processes for bridge and pavement performance measures and reporting. Some burdens in the rule will be realized in other reporting areas as described below. The PRA activities are already covered by existing OMB clearances. The reference numbers for

those clearances are: HPMS information collection, OMB No. 2125–0028 with an expiration of May 31, 2019; and NBI, OMB No. 2125–0501 with an expiration date of April 30, 2018. Any increase in PRA burdens caused by MAP–21 in these areas was addressed in PRA approval requests associated with those rulemakings.

This rule requires the submission of biennial performance reports. The FHWA analyzed this rule under the PRA and has determined the following:

Respondents: Approximately 684 applicants consisting of State DOTs, MPOs, Washington, DC, and Puerto Rico.

Frequency: Biennially.

Estimated Average Burden per Response: Approximately 416 hours to complete and submit the report.

Estimated Total Annual Burden Hours: Approximately 54,496 hours annually.

National Environmental Policy Act

The FHWA analyzed this action for the purpose of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*), and determined that it would not have any effect on the quality of the environment and meets the criteria for the categorical exclusion at 23 CFR 771.117(c)(20).

Executive Order 12630 (Taking of Private Property)

The FHWA analyzed this rule under E.O. 12630 (Governmental Actions and Interference with Constitutionally Protected Property Rights). The FHWA does not anticipate that this action would affect a taking of private property or otherwise have taking implications under E.O. 12630.

Executive Order 12988 (Civil Justice Reform)

This action meets applicable standards in sections 3(a) and 3(b)(2) of E.O. 12988 (Civil Justice Reform) to minimize litigation, eliminate ambiguity, and reduce burden.

Executive Order 13045 (Protection of Children)

The FHWA analyzed this rule under E.O. 13045 (Protection of Children from Environmental Health Risks and Safety Risks). The FHWA certifies that this action would not cause an environmental risk to health or safety that might disproportionately affect children.

Executive Order 13175 (Tribal Consultation)

The FHWA analyzed this action under E.O. 13175. The FHWA believes

that the action: (1) Would not have substantial direct effects on one or more Indian tribes; (2) would not impose substantial direct compliance costs on Indian tribal governments; and (3) would not preempt tribal laws. The final rule addresses obligations of Federal funds to State DOTs for Federal-aid highway projects and would not impose any direct compliance requirements on Indian tribal governments. Therefore, a tribal summary impact statement is not required.

Executive Order 12898 (Environmental Justice)

The E.O. 12898 requires that each Federal agency make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minorities and low-income populations. The FHWA has determined that this rule does not raise any environmental justice issues.

Executive Order 13211 (Energy Effects)

The FHWA analyzed this action under E.O. 13211 (Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use). The FHWA determined that this is not a significant energy action under E.O. 13211 and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. Therefore, a Statement of Energy Effects is not required.

Regulation Identifier Number

A RIN is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

List of Subjects in 23 CFR Part 490

Bridges, Highway safety, Highways and roads, Incorporation by reference, and Reporting and recordkeeping requirements.

Issued in Washington, DC, on January 6, 2017, under authority delegated in 49 CFR 1.85.

Gregory G. Nadeau,
Administrator, Federal Highway Administration.

In consideration of the foregoing, FHWA amends 23 CFR part 490 as follows:

PART 490—NATIONAL PERFORMANCE MANAGEMENT MEASURES

■ 1. The authority citation for part 490 continues to read as follows:

Authority: 23 U.S.C. 134, 135, 148(i), and 150; 49 CFR 1.85.

■ 2. Revise subpart A to read as follows:

Subpart A—General Information

Sec.

490.101 Definitions.

490.103 Data requirements.

490.105 Establishment of performance targets.

490.107 Reporting on performance targets.

490.109 Assessing significant progress toward achieving the performance targets for the National Highway Performance Program.

490.111 Incorporation by reference.

Subpart A—General Information

§ 490.101 Definitions.

Unless otherwise specified, the following definitions apply to this part: *Bridge* as used in this part is defined in § 650.305 of this title, the National Bridge Inspection Standards.

Full extent means continuous collection and evaluation of pavement condition data over the entire length of the roadway.

Highway Performance Monitoring System (HPMS) is a national level highway information system that includes data on the extent, condition, performance, use, and operating characteristics of the Nation's highways.

Mainline highways means the through travel lanes of any highway. Mainline highways specifically exclude ramps, shoulders, turn lanes, crossovers, rest areas, and other pavement surfaces that are not part of the roadway normally travelled by through traffic.

Measure means an expression based on a metric that is used to establish targets and to assess progress toward achieving the established targets (e.g., a measure for flight on-time performance is percent of flights that arrive on time, and a corresponding metric is an arithmetic difference between scheduled and actual arrival time for each flight).

Metric means a quantifiable indicator of performance or condition.

Metropolitan Planning Area (MPA) as used in this part is defined in § 450.104 of this title, Transportation Planning and Programming Definitions.

National Bridge Inventory (NBI) is an FHWA database containing bridge information and inspection data for all highway bridges on public roads, on and off Federal-aid highways, including tribally owned and Federally owned

bridges, that are subject to the National Bridge Inspection Standards (NBIS).

Non-urbanized area means a single geographic area that comprises all of the areas in the State that are not “urbanized areas” under 23 U.S.C. 101(a)(34).

Performance period means a determined time period during which condition/performance is measured and evaluated to: Assess condition/performance with respect to baseline condition/performance; and track progress toward the achievement of the targets that represent the intended condition/performance level at the midpoint and at the end of that time period. The term “performance period” applies to all proposed measures in this part, except the measures proposed for the Highway Safety Improvement Program (HSIP) in subpart B of this part. Each performance period covers a 4-year duration beginning on a specified date (provided in § 490.105).

Target means a quantifiable level of performance or condition, expressed as a value for the measure, to be achieved within a time period required by the Federal Highway Administration (FHWA).

§ 490.103 Data requirements.

(a) *In general.* Unless otherwise noted below, the data requirements in this section applies to the measures identified in subparts C and D of this part. Additional data requirements for specific performance measures are identified in 23 CFR sections—

- (1) 490.309 for the condition of pavements on the Interstate System;
- (2) 490.309 for the condition of pavements on the non-Interstate NHS;
- (3) 490.409 for the condition of bridges on the NHS;
- (4) [Reserved]

(b) *Urbanized area data*—The State DOTs shall submit urbanized area data, including boundaries of urbanized areas, in accordance with the HPMS Field Manual (incorporated by reference, see § 490.111) for the purpose of the additional targets for urbanized and non-urbanized areas in § 490.105(e). The boundaries of urbanized areas shall be identified based on the most recent U.S. Decennial Census, unless FHWA approves adjustments to the urbanized area as provided by 23 U.S.C. 101(a)(34), and these adjustments are submitted to HPMS, available at the time when the State DOT Baseline Performance Period Report is due to FHWA.

(c) [Reserved]

(d) *National Highway System data.* The State DOTs shall document and submit the extent of the NHS in

accordance with the HPMS Field Manual.

§ 490.105 Establishment of performance targets.

(a) *In general.* State departments of transportation (State DOT) shall establish performance targets for all measures specified in paragraph (c) of this section for the respective target scope identified in paragraph (d) of this section with the requirements specified in paragraph (e) of this section, and the Metropolitan Planning Organizations (MPO) shall establish performance targets for all measures specified in paragraph (c) of this section for respective target scope identified in paragraph (d) of this section with the requirements specified in paragraph (f) of this section.

(b) *Highway Safety Improvement Program measures.* State DOTs and MPOs shall establish performance targets for the Highway Safety Improvement Program (HSIP) measures in accordance with § 490.209.

(c) *Applicable measures.* State DOTs and MPOs that include, within their respective geographic boundaries, any portion of the applicable transportation network shall establish performance targets for the performance measures identified in 23 CFR sections—

- (1) 490.307(a)(1) and 490.307(a)(2) for the condition of pavements on the Interstate System;
- (2) 490.307(a)(3) and 490.307(a)(4) for the condition of pavements on the National Highway System (NHS) (excluding the Interstate); and
- (3) 490.407(c)(1) and 490.407(c)(2) for the condition of bridges on the NHS.

(d) *Target scope.* Targets established by the State DOT and MPO shall, regardless of ownership, represent the transportation network, including bridges that cross State borders, that are applicable to the measures as specified in paragraphs (d)(1) and (2) of this section.

(1) State DOTs and MPOs shall establish Statewide and metropolitan planning area wide targets, respectively, that represent the condition/performance of the transportation network that is applicable to the measures, as specified in 23 CFR sections—

- (i) 490.303 for the condition of pavements on the Interstate System measures specified in §§ 490.307(a)(1) and (a)(2);
- (ii) 490.303 for the condition of pavements on the National Highway System (NHS) (excluding the Interstate) measures specified in §§ 490.307(a)(3) and (a)(4); and

(iii) 490.403 for the condition of bridges on the NHS measures specified in §§ 490.407(c)(1) and (c)(2).

(2) [Reserved]

(3) For the purpose of target establishment in this section, reporting targets and progress evaluation in § 490.107 and significant progress determination in § 490.109, State DOTs shall declare and describe the urbanized area boundaries within the State boundary in the Baseline Performance Period Report required by § 490.107(b)(1). Any changes in urbanized area boundaries during a performance period would not be accounted for until the following performance period.

(e) State DOTs shall establish targets for each of the performance measures identified in paragraph (c) of this section for respective target scope identified in paragraph (d) of this section as follows:

(1) *Schedule*—State DOTs shall establish targets not later than 1 year of the effective date of this rule and for each performance period thereafter, in a manner that allows for the time needed to meet the requirements specified in this section and so that the final targets are submitted to FHWA by the due date provided in § 490.107(b).

(2) *Coordination.* State DOTs shall coordinate with relevant MPOs on the selection of targets in accordance with 23 U.S.C. 135(d)(2)(B)(i)(II) to ensure consistency, to the maximum extent practicable.

(3) *Additional targets for urbanized and non-urbanized areas.* In addition to statewide targets, described in paragraph (d)(1) of this section, State DOTs may, as appropriate, for each statewide target, establish additional targets for portions of the State.

(i) A State DOT shall declare and describe in the Baseline Performance Period Report required by § 490.107(b)(1) the boundaries used to establish each additional target. Any changes in boundaries during a performance period would not be accounted for until the following performance period.

(ii) State DOTs may select any number and combination of urbanized area boundaries and may also select a non-urbanized area boundary for the establishment of additional targets.

(iii) The boundaries used by the State DOT for additional targets shall be contained within the geographic boundary of the State.

(iv) State DOTs shall evaluate separately the progress of each additional target and report that progress as required under §§ 490.107(b)(2)(ii)(B) and (b)(3)(ii)(B).

(4) *Time horizon for targets.* State DOTs shall establish targets for a performance period as follows:

(i) The performance period will begin on:

(A) January 1st of the year in which the Baseline Performance Period Report is due to FHWA and will extend for a duration of 4 years for the measures in paragraphs (c)(1) through (c)(3) of this section; and

(B) [Reserved]

(ii) The midpoint of a performance period will occur 2 years after the beginning of a performance period described in paragraph (e)(4)(i) of this section.

(iii) State DOTs shall establish 2-year targets that reflect the anticipated condition/performance level at the midpoint of each performance period for the measures in paragraphs (c)(1) through (c)(3) of this section.

(iv) State DOTs shall establish 4-year targets that reflect the anticipated condition/performance level at the end of each performance period for the measures in paragraphs (c)(1) through (c)(3) of this section.

(5) *Reporting.* State DOTs shall report 2-year targets, 4-year targets, the basis for each established target, progress made toward the achievement of targets, and other requirements to FHWA in accordance with § 490.107, and the State DOTs shall provide relevant MPO(s) targets to FHWA, upon request, each time the relevant MPOs establish or adjust MPO targets, as described in paragraph (f) of this section.

(6) *Target adjustment.* State DOTs may adjust an established 4-year target in the Mid Performance Period Progress Report, as described in § 490.107(b)(2). State DOTs shall coordinate with relevant MPOs when adjusting their 4-year target(s).

(7) *Phase-in of new requirements for Interstate System pavement condition measures.* The following requirements apply only to the first performance period and the measures in §§ 490.307(a)(1) and (a)(2):

(i) State DOTs shall establish their 4-year targets, required under paragraph (e)(4)(iv) of this section, and report these targets in their Baseline Performance Period Report, required under § 490.107(b)(1);

(ii) State DOTs shall not report 2-year targets, described in paragraph (e)(4)(iii) of this section, and baseline condition/performance in their Baseline Performance Period Report; and

(iii) State DOTs shall update the baseline condition/performance in their Baseline Performance Period Report, with the 2-year condition/performance in their Mid Performance Period

Progress Report, described in § 490.107(b)(2)(ii)(A). State DOTs may also adjust their 4-year targets, as appropriate.

(f) The MPOs shall establish targets for each of the performance measures identified in paragraph (c) of this section for the respective target scope identified in paragraph (d) of this section as follows:

(1) *Schedule.* The MPOs shall establish targets no later than 180 days after the respective State DOT(s) establishes their targets, described in paragraph (e)(1) of this section.

(i) The MPOs shall establish 4-year targets, described in paragraph (e)(4)(iv) of this section, for all applicable measures, described in paragraphs (c) and (d) of this section.

(ii) [Reserved.]

(2) *Coordination.* The MPOs shall coordinate with relevant State DOT(s) on the selection of targets in accordance with 23 U.S.C. 134(h)(2)(B)(i)(II) to ensure consistency, to the maximum extent practicable.

(3) *Target establishment options.* For each performance measure identified in paragraph (c) of this section, MPOs shall establish a target by either:

(i) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT target for that performance measure; or

(ii) Committing to a quantifiable target for that performance measure for their metropolitan planning area.

(4) MPOs serving a multistate metropolitan planning area.—For each performance measure identified in paragraph (c)(1) through (c)(3) of this section, MPOs, with metropolitan planning areas extending across multiple State boundaries shall follow these requirements:

(i) For each measure, MPOs may choose different target establishment options, provided in paragraph (3) of this section, for each portion of the metropolitan area within each State.

(ii) If MPOs choose the option to agree to plan and program projects to contribute toward State DOT targets, in accordance with paragraph (3)(i) of this section, for a measure, then they shall plan and program projects in support of State DOT targets for each portion of the metropolitan area within each State.

(5)–(6) [Reserved]

(7) *MPO response to State DOT target adjustment.*—For the established targets in paragraph (3) of this section, if the State DOT adjusts a 4-year target in the State DOT's Mid Performance Period Progress Report and if, for that respective target, the MPO established a target by supporting the State DOT

target as allowed under paragraph (f)(3)(i) of this section, then the MPO shall, within 180 days, report to the State DOT whether they will either:

(i) Agree to plan a program of projects so that they contribute to the adjusted State DOT target for that performance measure; or

(ii) Commit to a new quantifiable target for that performance measure for its metropolitan planning area.

(8) *Target adjustment.* If the MPO establishes its target by committing to a quantifiable target, described in paragraph (f)(3)(ii) of this section, then the MPOs may adjust its target(s) in a manner that is mutually agreed upon by the State DOT and MPO.

(9) *Reporting.* The MPOs shall report targets and progress toward the achievement of their targets as specified in § 490.107(c). After the MPOs establish or adjust their targets, the relevant State DOT(s) must be able to provide these targets to FHWA, upon request.

§ 490.107 Reporting on performance targets.

(a) *In general.* All State DOTs and MPOs shall report the information specified in this section for the targets required in § 490.105.

(1) All State DOTs and MPOs shall report in accordance with the schedule and content requirements under paragraphs (b) and (c) of this section, respectively.

(2) For the measures identified in § 490.207(a), all State DOTs and MPOs shall report on performance in accordance with § 490.213.

(3) State DOTs shall report using an electronic template provided by FHWA.

(b) *State Biennial Performance Report.* State DOTs shall report to FHWA baseline condition/performance at the beginning of a performance period and progress achievement at both the midpoint and end of a performance period. State DOTs shall report at an ongoing 2-year frequency as specified in paragraphs (b)(1), (b)(2), and (b)(3) of this section.

(1) *Baseline Performance Period Report.*—(i) *Schedule.* State DOTs shall submit a Baseline Performance Period Report to FHWA by October 1 of the first year in a performance period. State DOTs shall submit their first Baseline Performance Period Report to FHWA by October 1, 2018, and subsequent Baseline Performance Period Reports to FHWA by October 1 every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information in each Baseline Performance Period Report:

(A) *Targets.* 2-year and 4-year targets for the performance period, as required

in § 490.105(e), and a discussion, to the maximum extent practicable, of the basis for each established target;

(B) *Baseline condition/performance.*—Baseline condition/performance derived from the latest data collected through the beginning date of the performance period specified in § 490.105(e)(4)(i) for each target, required under paragraph (b)(1)(ii)(A) of this section;

(C) *Relationship with other performance expectations.*—A discussion, to the maximum extent practicable, on how the established targets in paragraph (b)(1)(ii)(A) of this section support expectations documented in longer range plans, such as the State asset management plan for the NHS required by 23 U.S.C. 119(e) and the long-range statewide transportation plan provided in part 450 of this chapter; and

(D) *Urbanized area boundaries and population data for targets.*—For the purpose of determining target scope in § 490.105(d) and establishing additional targets for urbanized and non-urbanized areas in § 490.105(e)(3), State DOTs shall document the boundary extent for all applicable urbanized areas and the latest Decennial Census population data, based on information in HPMS.

(2) *Mid Performance Period Progress Report*—(i) *Schedule.* State DOTs shall submit a Mid Performance Period Progress Report to FHWA by October 1 of the third year in a performance period. State DOTs shall submit their first Mid Performance Period Progress Report to FHWA by October 1, 2020, and subsequent Mid Performance Period Progress Reports to FHWA by October 1 every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information in each Mid Performance Period Progress Report:

(A) *2-year condition/performance.* The actual condition/performance derived from the latest data collected through the midpoint of the performance period, specified in § 490.105(e)(4), for each State DOT reported target required in paragraph (b)(1)(ii)(A) of this section;

(B) *2-year progress in achieving performance targets.* A discussion of State DOT's progress toward achieving each established 2-year target in paragraph (b)(1)(ii)(A) of this section. The State DOT shall compare the actual 2-year condition/performance in paragraph (b)(2)(ii)(A) of this section, within the boundaries and limits documented in paragraphs (b)(1)(ii)(D) and (b)(1)(ii)(E) of this section, with the respective 2-year target and document in the discussion any reasons for

differences in the actual and target values;

(C) *Investment strategy discussion.* A discussion on the effectiveness of the investment strategies developed and documented in the State asset management plan for the NHS required under 23 U.S.C. 119(e);

(D) [Reserved]

(E) *Target adjustment discussion.*—When applicable, a State DOT may submit an adjusted 4-year target to replace an established 4-year target in paragraph (b)(1)(ii)(A) of this section. If the State DOT adjusts its target, it shall include a discussion on the basis for the adjustment and how the adjusted target supports expectations documented in longer range plans, such as the State asset management plan for the NHS, and the long-range statewide transportation plan. The State DOT may only adjust a 4-year target at the midpoint and by reporting the change in the Mid Performance Period Progress Report.

(F) *2-year significant progress discussion for the National Highway Performance Program (NHPP) targets.*—State DOTs shall discuss the progress they have made toward the achievement of all 2-year targets established for the NHPP measures in § 490.105(c)(1) through (c)(3). This discussion should document a summary of prior accomplishments and planned activities that will be conducted during the remainder of the Performance Period to make significant progress toward that achievement of 4-year targets for NHPP measures;

(G) *Extenuating circumstances discussion on NHPP 2-year targets.*—When applicable, a State DOT may include a discussion on the extenuating circumstance(s), described in § 490.109(e)(5), beyond the State DOT's control that prevented the State DOT from making 2-year significant progress toward achieving NHPP target(s) in paragraph (b)(2)(ii)(F) of this section; and

(H) *NHPP target achievement discussion.*—If FHWA determines that a State DOT has not made significant progress toward the achievement of NHPP targets in a biennial FHWA determination, then the State DOT shall include a description of the actions they will undertake to better achieve NHPP targets as required under § 490.109(f). If FHWA determines under § 490.109(e) that the State DOT has made significant progress, then the State DOT does not need to include this description.

(3) *Full Performance Period Progress Report*—(i) *Schedule.* State DOTs shall submit a progress report on the full performance period to FHWA by October 1 of the first year following the

reference performance period. State DOTs shall submit their first Full Performance Period Progress Report to FHWA by October 1, 2022, and subsequent Full Performance Period Progress Reports to FHWA by October 1 every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information for each Full Performance Period Progress Report:

(A) *4-year condition/performance.*—The actual condition/performance derived from the latest data collected through the end of the Performance Period, specified in § 490.105(e)(4), for each State DOT reported target required in paragraph (b)(1)(ii)(A) of this section;

(B) *4-year progress in achieving performance targets.*—A discussion of the State DOT's progress made toward achieving each 4-year target established in paragraph (b)(1)(ii)(A) or in paragraph (b)(2)(ii)(E) of this section, when applicable. The State DOT shall compare the actual 4-year condition/performance in paragraph (b)(3)(ii)(A) of this section, within the boundaries and limits documented in paragraph (b)(1)(ii)(D) and (b)(1)(ii)(E) of this section, with the respective 4-year target and document in the discussion any reasons for differences in the actual and target values;

(C) *Investment strategy discussion.*—A discussion on the effectiveness of the investment strategies developed and documented in the State asset management plan for the NHS required under 23 U.S.C. 119(e);

(D) [Reserved]

(E) *4-year significant progress evaluation for NHPP targets.*—State DOTs shall discuss the progress they have made toward the achievement of all 4-year targets established for the NHPP measures in § 490.105(c)(1) through (c)(3). This discussion shall include a summary of accomplishments achieved during the Performance Period to demonstrate whether the State DOT has made significant progress toward achievement of 4-year targets for NHPP measures.

(F) *Extenuating circumstances discussion on NHPP targets.*—When applicable, a State DOT may include discussion on the extenuating circumstance(s), described in § 490.109(e)(5), beyond the State DOT's control that prevented the State DOT from making a 4-year significant progress toward achieving NHPP targets, described in paragraph (b)(3)(ii)(E) of this section;

(G) *NHPP Target Achievement Discussion.*—If FHWA determines that a State DOT has not made significant progress toward the achievement of

NHPP targets in a biennial FHWA determination, then the State DOT shall include a description of the actions they will undertake to better achieve NHPP targets as required under § 490.109(f). If FHWA determines in § 490.109(e) that the State DOT has achieved significant progress, then the State DOT does not need to include this description.

(c) *MPO Report.* The MPOs shall establish targets in accordance with § 490.105 and report targets and progress toward the achievement of their targets in a manner that is consistent with the following:

(1) The MPOs shall report their established targets to their respective State DOT in a manner that is documented and mutually agreed upon by both parties.

(2) The MPOs shall report baseline condition/performance and progress toward the achievement of their targets in the system performance report in the metropolitan transportation plan in accordance with Part 450 of this chapter.

§ 490.109 Assessing significant progress toward achieving the performance targets for the National Highway Performance Program.

(a) *In general.* The FHWA will assess each of the State DOT targets separately for the NHPP measures specified in § 490.105(c)(1) through (c)(3) to determine the significant progress made toward the achievement of those targets.

(b) *Frequency.* The FHWA will determine whether a State DOT has or has not made significant progress toward the achievement of NHPP targets as described in paragraph (e) of this section at the midpoint and the end of each performance period.

(c) *Schedule.* The FHWA will determine significant progress toward the achievement of a State DOT's NHPP targets after the State DOT submit the Mid Performance Period Progress Report for progress toward the achievement of 2-year targets, and again after the State DOT submit the Full Performance Period Progress Report for progress toward the achievement of 4-year targets. The FHWA will notify State DOTs of the outcome of the determination of the State DOT's ability to make significant progress toward the achievement of its NHPP targets.

(d) *Source of data/information.* The FHWA will use the following sources of information to assess NHPP condition and performance progress:

(1) Data contained within the HPMS on June 15 of the year in which the significant progress determination is made that represents conditions from the prior year for targets established for

Interstate System pavement condition measures, as specified in § 490.105(c)(1);

(2) Data contained within the HPMS on August 15 of the year in which the significant progress determination is made that represents conditions from the prior year for targets established for non-Interstate NHS pavement condition measures, as specified in § 490.105(c)(2);

(3) The most recently available data contained within the NBI as of June 15 of the year in which the significant progress determination is made for targets established for NHS bridge condition measures, as specified in § 490.105(c)(3).

(4) Baseline condition data contained in HPMS and NBI of the year in which the Baseline Period Performance Report is due to FHWA that represents baseline conditions for the performance period.

(e) *Significant progress determination for individual NHPP targets.*—(1) *In general.* The FHWA will biennially assess whether the State DOTs has achieved or made significant progress toward each target established by the State DOT for the NHPP measures described in § 490.105(c)(1) through (c)(3). The FHWA will assess the significant progress of each statewide target separately using the condition/performance data/information sources described in paragraph (d) of this section. The FHWA will not assess the progress achieved for any additional targets a State DOT may establish under § 490.105(e)(3).

(2) *Significant progress toward individual NHPP targets.*—The FHWA will determine that a State DOT has made significant progress toward the achievement of each 2-year or 4-year NHPP target if either:

(i) The actual condition/performance level is better than the baseline condition/performance; or

(ii) The actual condition/performance level is equal to or better than the established target.

(3) *Phase-in of new requirements for Interstate System pavement condition measures.*—The following requirements shall only apply to the first performance period and the Interstate System pavement condition targets, described in § 490.105(e)(7):

(i) At the midpoint of the first performance period, FHWA will not make a determination of significant progress toward the achievement of 2-year targets for Interstate System pavement condition measures.

(ii) The FHWA will classify the assessment of progress toward the achievement of targets in paragraph (e)(3)(i) of this section as “progress not

determined” so that they will be excluded from the requirement under paragraph (e)(2) of this section.

(4) *Insufficient data and/or information.* The FHWA will determine that a State DOT has not made significant progress toward the achievement of an individual NHPP target if:

(i) A State DOT does not submit a required report, individual target, or other information as specified in § 490.107 for the each of the measures in § 490.105(c);

(ii) The data contained in HPMS does not meet the requirements under § 490.313(b)(4)(i) by the data extraction date specified in paragraph (d)(1) of this section for the each of the Interstate System pavement condition measures in § 490.105(c)(1);

(iii) The data contained in HPMS does not meet the requirements under § 490.313(b)(4)(i) by the data extraction date specified in paragraph (d)(2) of this section for the each of the non-Interstate NHS pavement condition measures in § 490.105(c)(2);

(iv) A State DOT reported data is not cleared in the NBI by the data extraction date specified in paragraph (d)(3) of this section for each of the NHS bridge condition measures in § 490.105(c)(3); or

(v) The data was determined insufficient, as described in paragraphs (e)(4)(ii) through (iv) of this section, in the year in which the Baseline Period Performance Report is due to FHWA for the measures in § 490.105(c), and the actual condition/performance level is not equal to or better than the established target.

(5) *Extenuating circumstances.* The FHWA will consider extenuating circumstances documented by the State DOT in the assessment of progress toward the achievement of NHPP targets in the relevant State Biennial Performance Report, provided in § 490.107.

(i) The FHWA will classify the assessment of progress toward the achievement of an individual 2-year or 4-year target as “progress not determined” if the State DOT has provided an explanation of the extenuating circumstances beyond the control of the State DOT that prevented it from making significant progress toward the achievement of a 2-year or 4-year target and the State DOT has quantified the impacts on the condition/performance that resulted from the circumstances, which are:

(A) Natural or man-made disasters that caused delay in NHPP project delivery, extenuating delay in data

collection, and/or damage/loss of data system;

(B) Sudden discontinuation of Federal Government furnished data due to natural and man-made disasters or sudden discontinuation of Federal Government furnished data due to lack of funding; and/or

(C) New law and/or regulation directing State DOTs to change metric and/or measure calculation.

(ii) If the State DOT's explanation, described in paragraph (e)(5)(i) of this section, is accepted by FHWA, FHWA will classify the progress toward achieving the relevant NHPP target(s) as "progress not determined," and those targets will be excluded from the requirement in paragraph (e)(2) of this section.

(f) *Performance achievement.* If FHWA determines that a State DOT has not made significant progress toward achieving the NHPP targets, then State DOTs shall include as part of the performance target report under sec. 150(e) [the Biennial Performance Report] a description of the actions the State DOT will undertake to achieve the targets related to the measure in which significant progress was not achieved as follows:

(1) If significant progress is not made for either target established for the Interstate System pavement condition measures, § 490.307(a)(1) and (a)(2), then the State DOT shall document the actions they will take to achieve Interstate Pavement condition targets;

(2) If significant progress is not made for either target established for the Non-Interstate System pavement condition measures, § 490.307(a)(3) and (a)(4), then the State DOT shall document the actions they will take to achieve Non-Interstate Pavement condition targets.

(3) If significant progress is not made for either target established for the NHS bridge condition measures, § 490.407(c)(1) and (c)(2), then the State DOT shall document the actions they will take to achieve the NHS bridge condition targets.

(4)–(5) [Reserved]

(6) The State DOT should, within 6 months of the significant progress determination, amend its Biennial Performance Report to document the information specified in this paragraph to ensure actions are being taken to achieve targets.

§ 490.111 Incorporation by reference.

(a) Certain material is incorporated by reference into this Part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section,

FHWA must publish a notice of change in the **Federal Register** and the material must be available to the public. All approved material is available for inspection at the Federal Highway Administration, Office of Highway Policy Information (202–366–4631) 1200 New Jersey Avenue SE., Washington, DC 20590, www.fhwa.dot.gov and is available from the sources listed below. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030 or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(b) The Federal Highway Administration, 1200 New Jersey Avenue SE., Washington, DC 20590, www.fhwa.dot.gov.

(1) Highway Performance Monitoring System (HPMS) Field Manual, IBR approved for §§ 490.103, 490.309, 490.311, and 490.319.

(2) Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges, includes: Errata Sheet for Coding Guide 06/2011, Report No. FHWA–PD–96–001, December 1995, IBR approved for §§ 490.409 and 490.411.

(c) The American Association of State Highway and Transportation Officials, 444 North Capitol Street NW., Suite 249, Washington, DC 20001, (202) 624–5800, www.transportation.org.

(1) AASHTO Standard M328–14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Inertial Profiler, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(2) AASHTO Standard R57–14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Operating Inertial Profiling Systems, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(3) AASHTO Standard R48–10 (2013), Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Determining Rut Depth in Pavements, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(4) AASHTO Standard R36–13, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Evaluating Faulting of Concrete Pavements, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(5) AASHTO Standard R43–13, Standard Specification for Transportation Materials and Methods

of Sampling and Testing, Standard Practice for Quantifying Roughness of Pavement, 2014, 34th/2014 Edition, IBR approved for § 490.311.

■ 3. Add subpart C to read as follows:

Subpart C—National Performance Management Measures for the Assessing Pavement Condition

Sec.

490.301 Purpose.

490.303 Applicability.

490.305 Definitions.

490.307 National performance management measures for assessing pavement condition.

490.309 Data requirements.

490.311 Calculation of pavement metrics.

490.313 Calculation of performance management measures.

490.315 Establishment of minimum level for condition of pavements.

490.317 Penalties for not maintaining minimum Interstate System pavement condition.

490.319 Other requirements.

Subpart C—National Performance Management Measures for the Assessing Pavement Condition

§ 490.301 Purpose.

The purpose of this subpart is to implement the following statutory requirements of 23 U.S.C. 150(c)(3) to:

(a) Establish measures for State DOTs and MPOs to assess the condition of pavements on the Interstate System;

(b) Establish measures for State DOTs and MPOs to assess the condition of pavements on the NHS (excluding the Interstate);

(c) Establish minimum levels for pavement condition on the Interstate System, only for purposes of carrying out 23 U.S.C. 119(f)(1);

(d) Establish data elements that are necessary to collect and maintain standardized data to carry out a performance-based approach; and

(e) Consider regional differences in establishing the minimum levels for pavement conditions on the Interstate System.

§ 490.303 Applicability.

The performance measures in this subpart are applicable to the mainline highways on the Interstate System and on the non-Interstate NHS.

§ 490.305 Definitions.

The following definitions are only applicable to this subpart, unless otherwise provided:

Asphalt pavements means pavements where the top-most surface is constructed with asphalt materials. These pavements are coded in the HPMS as having any one of the following Surface Types:

Code	Surface_type
2	Bituminous.
6	Asphalt-Concrete (AC) Overlay over Existing AC Pavement.
7	AC Overlay over Existing Jointed Concrete Pavement.
8	AC (Bituminous Overlay over Existing CRCP).

Continuously Reinforced Concrete Pavements (CRCP) means pavements where the top-most surface is

constructed of reinforced Portland cement concrete with no joints. These

pavements are coded in the HPMS as having the following Surface Type:

Code	Surface_type
5	CRCP—Continuously Reinforced Concrete Pavement.

Cracking means an unintentional break in the continuous surface of a pavement.

Cracking Percent means the percentage of pavement surface exhibiting cracking as follows:

(1) For asphalt pavements, Cracking Percent is the percentage of the area of the pavement section, exhibiting visible cracking.

(2) For jointed concrete pavements, Cracking Percent is the percentage of concrete slabs exhibiting cracking.

(3) For CRCP, the Cracking Percent is the percentage of pavement surface with longitudinal cracking and/or punchouts, spalling or other visible defects.

Faulting means a vertical misalignment of pavement joints in Portland Cement Concrete Pavements.

International Roughness Index (IRI) means a statistic used to estimate the amount of roughness in a measured longitudinal profile. The IRI is computed from a single longitudinal profile using a quarter-car simulation, as described in the report: "On the Calculation of IRI from Longitudinal Road Profile" (Sayers, M.W., Transportation Research Board 1501, Transportation Research Board, Washington, DC 1995).

Jointed concrete pavements means pavements where the top-most surface is constructed of Portland cement concrete with joints. It may be constructed of either reinforced or unreinforced (plain) concrete. It is coded in the HPMS as having any one of the following Surface Types:

Code	Surface_type
3	Jointed Plain Concrete Pavement (includes whitetopping).
4	Jointed Reinforced Concrete Pavement (includes whitetopping).
9	Unbonded Jointed Concrete Overlay on PCC Pavement.
10	Bonded PCC Overlay on PCC Pavement.

Pavement means any hard surfaced travel lanes of any highway.

Pavement section means a nominally 0.1 mile-long reported segment that defines the limits of pavement condition metrics required by FHWA.

Present Serviceability Rating (PSR) means an observation based system used to rate pavements.

Punchout means a distress specific to CRCP described as the area between two closely spaced transverse cracks and between a short longitudinal crack and the edge of the pavement (or a longitudinal joint) that is breaking up, spalling, or faulting.

Rutting means longitudinal surface depressions in the pavement derived from measurements of a profile transverse to the path of travel on a highway lane. It may have associated transverse displacement.

Sampling as applied to pavements, means measuring pavement conditions on a short section of pavement as a statistical representation for the entire section. Sampling is not to be used to measure or rate NHS pavement conditions.

§ 490.307 National performance management measures for assessing pavement condition.

(a) To carry out the NHPP, the performance measures for State DOTs to assess pavement condition are:

- (1) Percentage of pavements of the Interstate System in Good condition;
- (2) Percentage of pavements of the Interstate System in Poor condition;
- (3) Percentage of pavements of the non-Interstate NHS in Good condition; and
- (4) Percentage of pavements of the non-Interstate NHS in Poor condition.

(b) State DOTs will collect data using the methods described in § 490.309 and will process this data to calculate individual pavement metrics for each section of pavement that will be reported to FHWA as described in § 490.311. State DOTs and FHWA will

use the reported pavement metrics to compute an overall performance of Good, Fair, or Poor, for each section of pavement as described in § 490.313.

§ 490.309 Data requirements.

(a) The performance measures identified in § 490.307 are to be computed using methods in § 490.313 from the four condition metrics and three inventory data elements contained within the HPMS that shall be collected and reported following the HPMS Field Manual, which is incorporated by reference into this subpart (see § 490.111). State DOTs shall report four condition metrics for each pavement section: IRI, rutting, faulting, and Cracking_Percent. State DOTs shall also report three inventory data elements as directed in the HPMS Field Manual: Through Lanes, Surface Type, and Structure Type. All pavement data collected after January 1, 2018 for Interstate highways and January 1, 2020 for non-Interstate National Highway System routes shall meet the requirements of this section.

(b) State DOTs shall collect data in accordance with the following relevant HPMS requirements to report IRI, rutting (asphalt pavements), faulting (jointed concrete pavements), and Cracking percent. State DOTs will be permitted to report present serviceability rating (PSR) for specific locations in accordance with the HPMS requirements as an alternative where posted speed limits are less than 40 miles per hour.

(1) For the Interstate System the following shall apply for all the pavement condition metrics:

(i) State DOTs shall collect data—

(A) From the full extent of the mainline highway;

(B) In the rightmost travel lane or one consistent lane for all data if the rightmost travel lane carries traffic that is not representative of the remainder of the lanes or is not readily accessible due

to closure, excessive congestion, or other events impacting access;

(C) Continuously collected in a manner that will allow for reporting in nominally uniform pavement section lengths of 0.10 mile (528 feet); shorter pavement sections are permitted only at the beginning of a route, end of a route, at bridges, at locations where surface type changes or other locations where a pavement section length of 0.10 mile is not achievable; the maximum length of pavement sections shall not exceed 0.11 mile (580.8 feet);

(D) In at least one direction of travel; and

(E) On an annual frequency.

(ii) Estimating conditions from data samples of the full extent of the mainline highway is not permitted.

(iii) State DOTs may collect and report pavement condition data separately for each direction of divided highways on the Interstate System. Averaging across directions is not permitted. When pavement condition data is collected in one direction only, the measured conditions shall apply to all lanes in both directions for that pavement section for purposes of this part.

(iv) For the portions of the Interstate mainline highway pavements where posted speed limits are less than 40 MPH (*e.g.*, border crossings, toll plazas), State DOTs may collect and report the Present Serviceability Rating (PSR) as an alternative to the IRI, Cracking_Percent, rutting, and faulting in this pavement section and shall follow the following requirements:

(A) The PSR shall be determined as a value from 0 to 5 per the procedures prescribed in the HPMS Field Manual;

(B) Alternative pavement condition methods may be allowed to estimate a PSR with prior approval from FHWA of the method of correlation between their condition determination and PSR as required in the HPMS Field Manual;

(C) The PSR data shall be continuously collected in a manner that will allow for reporting in uniform pavement section lengths of 0.10 mile (528 feet); shorter pavement sections are permitted only at the beginning of a route, end of a route, at bridges, at locations where surface type changes or other locations where a pavement section length of 0.10 mile is not achievable; the maximum length of pavement sections shall not exceed 0.11 mile (580.8 feet);

(D) The PSR data shall be collected in at least one direction of travel; and

(E) The PSR data shall be collected on an annual frequency.

(2) For the non-Interstate NHS the following shall apply:

(i) For the IRI metric, State DOTs shall collect and report data:

(A) From the full extent of the mainline highway;

(B) In the rightmost travel lane or one consistent lane for all data if the rightmost travel lane is not accessible;

(C) Continuously collected in a manner that will allow for reporting in uniform pavement section lengths of 0.10 mile (528 feet); shorter pavement sections are permitted only at the beginning of a route, end of a route, at bridges, at locations where surface type changes or other locations where a pavement section length of 0.10 mile is not achievable; the maximum length of pavement sections shall not exceed 0.11 mile (580.8 feet)

(D) In one direction of travel; and

(E) On a biennial frequency.

(F) Estimating IRI metrics from data samples of the full extent of the mainline will not be permitted.

(ii) For the Cracking percent, rutting and faulting metrics, State DOTs shall collect data—

(A) On the full extent (no sampling) of the mainline highway;

(B) In the rightmost travel lane or one consistent lane for all data if the rightmost travel lane is not accessible;

(C) Continuously collected in a manner that will allow for reporting in uniform pavement section lengths of 0.10 mile (528 feet); shorter pavement sections are permitted only at the beginning of a route, end of a route, at bridges, at locations where surface type changes or other locations where a pavement section length of 0.10 mile is not achievable; the maximum length of pavement sections shall not exceed 0.11 mile (580.8 feet)

(D) In one direction of travel; and

(E) On at least a biennial frequency.

(F) Estimating conditions from data samples of the full extent of the mainline highway will not be permitted.

(iii) For the portions of mainline highways where posted speed limits of less than 40 MPH, State DOTs may collect the Present Serviceability Rating (PSR) as an alternative to the IRI, Cracking_Percent, rutting, and faulting pavement condition metrics, in paragraphs (b)(2)(i) and (ii) of this section, and shall follow the following requirements:

(A) The PSR shall be determined as a 0 to 5 value per the procedures prescribed in the HPMS Field Manual;

(B) Alternative pavement condition methods may be allowed to estimate a PSR with prior approval from FHWA of the method of correlation between their condition determination and PSR as required in the HPMS Field Manual;

(C) The PSR data shall be continuously collected in a manner that

will allow for reporting in uniform pavement section lengths of 0.10 mile (528 feet); shorter pavement sections are permitted only at the beginning of a route, end of a route, at bridges, at locations where surface type changes or other locations where a pavement section length of 0.10 mile is not achievable; the maximum length of pavement sections shall not exceed 0.11 mile (580.8 feet);

(D) The PSR data shall be collected in one direction of travel; and

(E) The PSR data shall be collected on at least a biennial frequency.

(3) Data collection methods for each of the condition metrics shall conform to the following:

(i) The device to collect data needed to calculate the IRI metric shall be in accordance with American Association of State Highway Transportation Officials (AASHTO) Standard M328–14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Equipment Specification for Inertial Profiler (incorporated by reference, see § 490.111).

(ii) The method to collect data needed to calculate the IRI metric shall be in accordance with AASHTO Standard R57–14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Operating Inertial Profiling Systems (incorporated by reference, see § 490.111).

(iii) For highways with a posted speed limit less than 40 miles per hour, an alternate method for estimation of IRI is permitted as described in § 490.309(b)(1)(iv) or § 490.309(b)(2)(iii) may be used in lieu of measuring IRI, cracking, rutting and faulting.

(iv) The method to collect data needed to determine the Cracking_Percent metric for all pavement types except CRCP shall be manual, semi-automated, or fully automated in accordance with the HPMS Field Manual (incorporated by reference, see § 490.111).

(v) For CRCP the method to collect the data needed to determine the Cracking_Percent metric is described in the HPMS Field Manual (incorporated by reference, see § 490.111) and includes longitudinal cracking and/or punchouts, spalling, or other visible defects.

(vi) For asphalt pavements, the method to collect data needed to determine the rutting metric shall either be:

(A) A 5-Point Collection of Rutting Data method in accordance with AASHTO Standard R48–10, Standard Specification for Transportation Materials and Methods of Sampling and

Testing, Standard Practice for Determining Rut Depth in Pavements (incorporated by reference, see § 490.111); or

(B) An Automated Transverse Profile Data method in accordance with the HPMS Field Manual (incorporated by reference, see § 490.111).

(vii) For jointed concrete pavements, the method to collect data needed to determine the faulting metric shall be in accordance with AASHTO Standard R36–13, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Evaluating Faulting of Concrete Pavements (incorporated by reference, see § 490.111).

(c) State DOTs shall collect data in accordance with the following relevant HPMS requirements to report Through Lanes, Surface Type, and Structure Type.

(1) State DOTs shall collect data:

(i) For the full extent of the mainline highway of the NHS;

(ii) In at least one direction of travel for the Interstate System and in one direction of travel for the non-Interstate NHS; and

(iii) On an annual frequency on the Interstate routes and on at least a biennial frequency on non-Interstate NHS routes.

(2) Estimating data elements from samples of the full extent of the mainline highway is not permitted.

§ 490.311 Calculation of pavement metrics.

(a) The condition metrics and inventory data elements needed to calculate the pavement performance measures shall be calculated in accordance with the HPMS Field Manual (incorporated by reference, see § 490.111), except as noted below.

(b) State DOTs shall calculate metrics in accordance with the following relevant HPMS requirements.

(1) For all pavements, the IRI metric:

(i) Shall be computed from pavement profile data in accordance with AASHTO Standard R43–13, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Quantifying Roughness of Pavement, 2014, 34th/2014 Edition, AASHTO, 1–56051–606–4 (incorporated by reference, see § 490.111);

(ii) Shall be reported for all pavements as the average value in inches per mile for each section; and

(iii) Shall not be estimated from a PSR or other observation-based method except where permitted in § 490.309(b)(3)(iii).

(2) For asphalt pavements—

(i) The Cracking_Percent metric shall be computed as the percentage of the

total area containing visible cracks to the nearest whole percent in each section; and

(ii) The rutting metric shall be computed as the average depth of rutting, in inches to the nearest 0.01 inches, for the section.

(3) For CRCP, the Cracking_Percent metric shall be computed as the percentage of the area of the section to the nearest whole percent exhibiting longitudinal cracking, punchouts, spalling, or other visible defects. Transverse cracking shall not be considered in the Cracking_Percent metric.

(4) For jointed concrete pavements—

(i) The Cracking_Percent metric shall be computed as the percentage of slabs to the nearest whole percent within the section that exhibit cracking;

(ii) Partial slabs shall contribute to the section that contains the majority of the slab length; and

(iii) The faulting metric shall be computed as the average height, in inches to the nearest 0.01 inch, of faulting between pavement slabs for the section.

(5) For the mainline highways on the non-Interstate NHS with posted speed limits of less than 40 MPH—

(i) The present serviceability rating (PSR) may be used as an alternative to the IRI, Cracking_Percent, rutting, and faulting pavement condition metrics.

(ii) The PSR shall be determined as a 0 to 5 value per the procedures prescribed in the HPMS Field Manual.

(iii) Alternative pavement condition methods may be allowed to estimate a PSR with prior approval from FHWA of the method of correlation between their condition determination and PSR as required in the HPMS Field Manual.

(c) State DOTs shall report the four pavement metrics listed in § 490.309(a) as calculated following the requirements in paragraphs (a) and (b) of this section in accordance with the following relevant HPMS requirements:

(1) Pavement condition metrics shall be reported to the HPMS in uniform section lengths of 0.1 mile (528 feet); shorter sections are permitted only at the beginning of a route, the end of a route, at bridges, or other locations where a section length of 0.1 mile is not achievable; and the maximum length of sections shall not exceed 0.11 mile (580.8 feet)

(2) Each measured section shall have a single value for each of the relevant condition metrics. Sections where condition is estimated from PSR will have one value for the overall condition.

(3) The time and location reference shall be reported for each section as follows:

(i) The State Code, Route ID, Begin Point, and End Point shall be reported as specified in the HPMS field manual (incorporated by reference, see § 490.111) for each of the four condition metrics.

(ii) The Year Record shall be reported as the four digit year for which the data represents for each of the four condition metrics; and

(iii) The Value Date shall be reported as the month and year of data collection for each of the four condition metrics.

(4) Sections for the four condition metrics shall be reported to the HPMS for the Interstate System by April 15 of each year for the data collected during the previous calendar year.

(5) Sections for the four condition metrics shall be reported to the HPMS for the non-Interstate NHS by June 15 of each year for the data collected during the previous calendar year(s).

(d) The three inventory data elements, Through Lanes, Surface Type, and Structure Type shall be reported to the HPMS as directed in Chapter 4 of the HPMS Field Manual for the entire extent of the NHS.

(1) Section Lengths for the three inventory data items are not required to meet the 0.1 mile nominal length but may be any logical length as defined in the HPMS Field Manual.

(2) The three inventory data elements shall be reported to the HPMS for the Interstate System by April 15 of each year.

(3) The three inventory data elements shall be reported to the HPMS for the non-Interstate NHS by June 15 of the each year that data reporting is required.

§ 490.313 Calculation of performance management measures.

(a) The pavement measures in § 490.307 shall be calculated in accordance with this section and used by State DOTs and MPOs to carry out the pavement condition related requirements of this part, and by FHWA to make the significant progress and minimum condition determinations specified in §§ 490.109 and 490.317, respectively.

(b) The performance measure for pavements shall be calculated based on the data collected in § 490.309 and pavement condition metrics computed in § 490.311. The performance measure for pavements shall be based on three condition ratings of Good, Fair, and Poor calculated for each pavement section. The ratings are determined as follows:

(1) IRI rating shall be determined for all pavement types using the following criteria. If an IRI value of a pavement section is:—

(i) Less than 95, the IRI rating for the pavement section is Good;

(ii) Between 95 and 170, the IRI rating for the pavement section is Fair; and

(iii) Greater than 170, the IRI rating for the pavement section is Poor.

(2) Cracking condition shall be determined using the following criteria:

(i) For asphalt pavement sections—

(A) If the Cracking_Percent value of a section is less than 5 percent, the cracking rating for the pavement section is Good;

(B) If the Cracking_Percent value of a section is equal to or greater than 5 percent and less than or equal to 20 percent the cracking rating for the pavement section is Fair; and

(C) If the Cracking_Percent value of a section is greater than 20 percent the cracking rating for the pavement section is Poor.

(ii) For jointed concrete pavement sections—

(A) If the Cracking_Percent value of a section is less than 5 percent, the cracking rating for the pavement section is Good;

(B) If the Cracking_Percent value of a section is equal to or greater than 5 percent and less than or equal to 15 percent the cracking rating for the pavement section is Fair; and

(C) If the Cracking_Percent value of a section is greater than 15 percent the cracking rating for the pavement section is Poor.

(iii) For CRCP sections:

(A) If the Cracking_Percent value of a section is less than 5 percent, the cracking rating for the pavement section is Good;

(B) If the Cracking_Percent value of a section is equal to or greater than 5 percent and less than or equal to 10 percent, the cracking rating for the pavement section is Fair; and

(C) If the Cracking_Percent value of a section is greater than 10 percent, the cracking rating for the pavement section is Poor.

(3) Rutting or faulting rating shall be determined using the following criteria.

(i) For asphalt pavement:

(A) If the rutting value of a section is less than 0.20 inches, the rutting rating for the pavement section is Good;

(B) If the rutting value of a section is equal to or greater than 0.20 inches and less than or equal to 0.40 inches, the rutting rating for the pavement section is Fair; and

(C) If the rutting value of a section is greater than 0.40 inches, the rutting rating for the pavement section is Poor.

(ii) For jointed concrete pavement:

(A) If the faulting value of a section is less than 0.10 inches, the faulting rating for the pavement section is Good;

(B) If the faulting value of a section is equal to or greater than 0.10 inches and less than or equal to 0.15 inches, the faulting rating for the pavement section is Fair; and

(C) If the faulting value of a section is greater than 0.15 inches, the faulting rating for the pavement section is Poor.

(4) The FHWA will determine that a reported section in HPMS has a missing, invalid or unresolved data on the dates specified in § 490.317(b) for Interstate System and § 490.109(d)(2) and (d)(4) for non-Interstate NHS, if a reported section does not meet any one of the data requirements specified in §§ 490.309 and 490.311(c) or that reported section does not provide sufficient data to determine its Overall Condition specified in paragraphs (c) through (f) of this section:

(i) Total mainline lane-miles of missing, invalid, or unresolved sections for Interstate System and non-Interstate NHS shall be limited to no more than 5 percent of the total lane miles less the sections excluded in § 490.313(f)(1). For each pavement section without collected its condition metrics and inventory data, State DOTs shall note in the HPMS submittal with a specific code identified in the HPMS Field Manual (incorporated by reference, see § 490.111) noting the reason it was not collected.

(ii) Calculation of overall pavement conditions in any State meeting the requirements of § 490.309(b) shall be based only on sections containing data reported in the HPMS Submittal as of the submission dates required in § 490.311(c)(4) and (5). State DOTs not meeting the requirements of § 490.309(b) will be considered as not in compliance with § 420.105(b) requiring State DOTs to submit data to the HPMS and not in compliance with § 490.107 requiring reporting on performance targets. Failure to report data meeting the requirements of § 490.309(b) by the submission dates for the Interstate System will be considered as not meeting the minimum requirements for pavement conditions on the Interstate System and that State DOT is subject to the penalties in § 490.315.

(c) The Overall condition for asphalt and jointed concrete pavement sections shall be determined based on the ratings for IRI, Cracking_Percent, rutting and faulting, as described in paragraphs (b)(1), (b)(2), (b)(3) and (b)(4) of this section, respectively, for each section as follows:

(1) A pavement section shall be rated an overall condition of Good only if the section is exhibiting Good ratings for all three conditions (IRI, Cracking_Percent, and rutting or faulting);

(2) A pavement section shall be rated an overall condition of Poor if two or more of the three conditions are exhibiting Poor ratings (at least two ratings of Poor for IRI, Cracking_Percent, and rutting or faulting).

(3) A pavement section shall be rated an overall condition of Fair if it does not meet the criteria in paragraphs (c)(1) or (c)(2) of this section.

(4) For sections on roadways where the posted speed limit is less than 40 MPH and where the State DOT has reported PSR in lieu of the IRI, Cracking_Percent, rutting, and faulting metrics the PSR condition level shall be determined using the following criteria:

(i) If the PSR of a section is equal to or greater than 4.0 the PSR rating for the pavement section is Good;

(ii) If the PSR of a section is less than 4.0 and greater than 2.0 the PSR rating for the pavement section is Fair; and

(iii) If the PSR of a section is less than or equal to 2.0 the PSR rating for the pavement section is Poor.

(d) The Overall condition for CRCP sections shall be determined based on two ratings of IRI and Cracking_Percent, as described in paragraphs (b)(1) and (b)(2) of this section or based on PSR where appropriate as described in paragraph (c)(4) of this section, respectively, for each section as follows:

(1) A pavement section shall be rated an overall condition of Good only if the section is exhibiting Good ratings for both conditions (IRI and Cracking_Percent);

(2) A pavement section shall be rated an overall condition of Poor if it exhibits Poor ratings for both conditions (IRI and Cracking_Percent);

(3) A pavement section shall be rated an overall condition of Fair if it does not meet the criteria in paragraphs (d)(1) or (d)(2) of this section.

(4) For pavement sections that are on roadways with a posted speed limit of less than 40 MPH where the State DOT reported the PSR metric in lieu of the IRI, Cracking_Percent, faulting, and rutting metrics the pavement section shall be rated an overall condition equal to the PSR condition rating as described in section (c)(4) above

(e) State DOTs shall not be subject to paragraphs (c) and (d) of this section for Pavements on the until after the data collection cycle ending December 31, 2018, for Interstate highways and December 31, 2021, for the non-Interstate NHS. During this transition period, the Overall condition for all pavement types will be based on IRI rating, as described in paragraph (b)(1) of this section, or on PSR as described in paragraphs (c)(4) or (d)(4) of this section.

(f) The pavement condition measures in § 490.307 shall be computed as described below. The measures shall be used for establishing targets in accordance with § 490.105 and reporting the conditions of the pavements in the biennial performance reporting required in § 490.107 as follows:

(1) Bridges shall be excluded prior to computing all pavement condition measures by removing the sections where the Structure_Type data item in the HPMS is coded as 1. Sections that have an unpaved surface or an “other” surface type (such as cobblestone, planks, brick) shall be excluded prior to computing all pavement condition

measures by removing the sections where the Surface_Type data item in the HPMS is coded as 1 or as 11.

(2) For § 490.307(a)(1) the measure for percentage of lane-miles of the Interstate System in Good condition shall be computed to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{g=1}^{Good} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ g}}{\sum_{t=1}^{Total} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ t}}$$

Where:

Good = total number of mainline highway Interstate System sections where the overall condition is Good;

g = a section's overall condition is determined Good per paragraphs (b) or (c) of this section;

t = an Interstate System section;

Total = total number of mainline highway Interstate System sections excluding bridges, unpaved surface and “other” surface types, and missing data sections, described in paragraph (f)(1) and (b)(4)(i) of this section.

Begin_Point = Begin Milepost of each section g or t ;

End Point = End Milepost of each section g or t ; and

Through_lanes = the number of lanes designated for through-traffic represented by a section g or t .

(3) For § 490.307(a)(2) the measure for percentage of lane-miles of the Interstate System in Poor condition shall be computed to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{p=1}^{Poor} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ p}}{\sum_{t=1}^{Total} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ t}}$$

Where:

Poor = total number of mainline highway Interstate System sections where the overall condition is Poor;

p = a section's overall condition is determined Poor per paragraphs (b) or (c) of this section;

t = an Interstate System section;

Total = total number of mainline highway Interstate System sections excluding bridges, unpaved surface and “other” surface types, and missing data sections, described in paragraph (f)(1) and (b)(4)(i) of this section;

Begin_Point = Begin Milepost of each section p or t ;

End Point = End Milepost of each section p or t ; and

Through_lanes = the number of lanes designated for through-traffic represented by a section p or t .

(4) For § 490.307(a)(3) the measure for percentage of lane-miles of the non-Interstate NHS in Good condition in § 490.307(a)(3) shall be computed to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{g=1}^{Good} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ g}}{\sum_{t=1}^{Total} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ t}}$$

Where:

Good = total number of mainline highway non-Interstate NHS sections where the overall condition is Good;

g = a section's overall condition is determined Good per paragraphs (b), (c) or (d) of this section;

t = a non-Interstate NHS section;

Total = total number of mainline highway non-Interstate NHS sections excluding bridges, unpaved surface and “other” surface types, and missing data sections, described in paragraph (f)(1) and (b)(4)(i) of this section;

Begin_Point = Begin Milepost of each section g or t ;

End Point = End Milepost of each section g or t ; and

Through_lanes = the number of lanes designated for through-traffic represented by a section g or t .

(5) For § 490.307(a)(4) the measure for percentage of lane-miles of the non-Interstate NHS in Poor condition in § 490.307(a)(4) shall be computed to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{p=1}^{Poor} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ p}}{\sum_{t=1}^{Total} \{ \langle End_Point - Begin_Point \rangle \times Through_lanes \}_{section\ t}}$$

Where:

Poor = total number of mainline highway non-Interstate NHS sections where the overall condition is Poor;

p = a section's overall condition is determined Poor per paragraphs (b), (c) or (d) of this section;

t = a non-Interstate NHS section;

Total = total number of mainline highway non-Interstate NHS sections excluding bridges, unpaved surface and "other" surface types, and missing data sections, described in paragraph (f)(1) and (b)(4)(i) of this section;

Begin_Point = Begin Milepost of each section p or t ;

End Point = End Milepost of each section p or t ; and

Through_lanes = the number of lanes designated for through-traffic represented by a section p or t .

§ 490.315 Establishment of minimum level for condition of pavements.

(a) For the purposes of carrying out the requirements of 23 U.S.C. 119(f)(1), the percentage of lane-miles of Interstate System in Poor condition, as computed per § 490.313(e)(3), shall not exceed 5.0 percent except as noted in paragraph (b) of this section.

(b) For the purposes of carrying out the requirements of 23 U.S.C. 119(f)(1), the percentage of lane-miles of Interstate System in Poor condition within the State of Alaska, as computed per § 490.313(e)(3), shall not exceed 10.0 percent.

§ 490.317 Penalties for not maintaining minimum Interstate System pavement condition.

(a) The FHWA shall compute the Percentage of lane-miles of the Interstate System, excluding sections on bridges, in Poor Condition, in accordance with § 490.313(e)(3), for each State annually.

(b) Each year, FHWA shall extract data contained within the HPMS on June 15 that represents conditions from the prior calendar year for Interstate System pavement conditions to carry out paragraph (a) of this section, beginning with data collected during the 2018 calendar year.

(c) The FHWA shall determine if a State DOT is in compliance with § 490.315(a) or § 490.315(b) and 23 U.S.C. 119(f)(1) after the first full year of data collection for the Interstate System and each year thereafter.

(d) The FHWA will notify State DOTs of their compliance with 23 U.S.C. 119(f)(1) prior to October 1 of the year in which the determination was made.

(e) If FHWA determines through conduct of paragraph (d) of this section a State DOT to be out of compliance with 23 U.S.C. 119(f)(1) then the State DOT shall, during the following fiscal year:

(1) Obligate, from the amounts apportioned to the State DOT under 23 U.S.C. 104(b)(1) (for the NHPP), an amount that is not less than the amount of funds apportioned to the State for Federal fiscal year 2009 under the Interstate Maintenance program for the

purposes described in 23 U.S.C. 119 (as in effect on the day before the date of enactment of the MAP-21), except that for each year after Federal fiscal year 2013, the amount required to be obligated under this clause shall be increased by 2 percent over the amount required to be obligated in the previous fiscal year; and

(2) Transfer, from the amounts apportioned to the State DOT under 23 U.S.C. 104(b)(2) (for the Surface Transportation Program) (other than amounts sub-allocated to metropolitan areas and other areas of the State under 23 U.S.C. 133(d)) to the apportionment of the State under 23 U.S.C. 104(b)(1), an amount equal to 10 percent of the amount of funds apportioned to the State for fiscal year 2009 under the Interstate Maintenance program for the purposes described in 23 U.S.C. 119 (as in effect on the day before the date of enactment of the MAP-21).

§ 490.319 Other requirements.

(a) In accordance with the HPMS Field Manual (incorporated by reference, see § 490.111), each State DOT shall report the following to the HPMS no later than April 15 each year:

(1) The pavement condition metrics specified in § 490.311 that are necessary to calculate the Interstate System condition measures identified in §§ 490.307(a)(1) and (a)(2) and;

(2) The data elements specified in § 490.309(c) for the Interstate System

(b) In accordance with the HPMS Field Manual (incorporated by reference, see § 490.111), each State DOT shall report to the HPMS no later than June 15 each year the pavement condition metrics specified in § 490.311 that are necessary to calculate the non-Interstate NHS condition measures in §§ 490.307(a)(3) and (a)(4).

(c) Each State DOT shall develop and utilize a Data Quality Management Program, approved by FHWA that addresses the quality of all data collected, regardless of the method of acquisition, to report the pavement condition metrics, discussed in § 490.311, and data elements discussed in § 490.309(c).

(1) In a Data Quality Management Programs, State DOTs shall include, at a minimum, methods and processes for:

(i) Data collection equipment calibration and certification;

(ii) Certification process for persons performing manual data collection;

(iii) Data quality control measures to be conducted before data collection begins and periodically during the data collection program;

(iv) Data sampling, review and checking processes; and

(v) Error resolution procedures and data acceptance criteria.

(2) Not later than 1 year after the effective date of this regulation, State DOTs shall submit their Data Quality Management Program to FHWA for approval. Once FHWA approves a State DOT's Data Quality Management Program, the State DOT shall use that Program to collect and report data required by §§ 490.309 to 490.311. State DOTs also shall submit any proposed significant change to the Data Quality Management Program to FHWA for approval prior to implementing the change.

■ 4. Add subpart D to read as follows:

Subpart D—National Performance Management Measures for Assessing Bridge Condition

Sec.

490.401 Purpose.

490.403 Applicability.

490.405 Definitions.

490.407 National performance management measures for assessing bridge condition.

490.409 Calculation of National performance management measures for assessing bridge condition.

490.411 Establishment of minimum level for condition for bridges.

490.413 Penalties for not maintaining bridge condition.

Subpart D—National Performance Management Measures for Assessing Bridge Condition

§ 490.401 Purpose.

The purpose of this subpart is to implement the requirements of 23 U.S.C. 150(c)(3)(A)(ii)(III), which requires the Secretary of Transportation to establish performance measures for the purpose of carrying out the NHPP and for State DOTs and MPOs to use in assessing the condition of bridges carrying the NHS which includes on- and off-ramps connected to the NHS.

§ 490.403 Applicability.

The section is only applicable to bridges carrying the NHS, which includes on- and off-ramps connected to the NHS.

§ 490.405 Definitions.

The following definitions are only applicable to this subpart, unless otherwise provided:

Structurally deficient as used in §§ 490.411 and 490.413 is a classification given to a bridge which has any component in Poor or worse condition or the adequacy of the waterway opening provided by the bridge is determined to be insufficient to the point of causing overtopping with intolerable traffic interruptions. Beginning with calendar year 2018 and

thereafter, *structurally deficient* as used in §§ 490.411 and 490.413 is a classification given to a bridge which has any component in Poor or worse condition.

§ 490.407 National performance management measures for assessing bridge condition.

(a) There are three classifications for the purpose of assessing bridge condition. They are:

(1) Percentage of NHS bridges classified as in Good condition;

(2) Percentage of NHS bridges classified as in Fair condition; and

(3) Percentage of NHS bridges classified as in Poor condition.

(b) [Reserved]

(c) To carry out the NHPP, two of the three classifications are performance measures for State DOTs to use to assess bridge condition on the NHS. They are:

(1) Percentage of NHS bridges classified as in Good condition; and

(2) Percentage of NHS bridges classified as in Poor condition.

(d) Determination of Good and Poor conditions are described in § 490.409.

§ 490.409 Calculation of National performance management measures for assessing bridge condition.

(a) The bridge measures in § 490.407 shall be calculated in accordance with this section and used by State DOTs and MPOs to carry out the bridge condition related requirements of this part and by FHWA to make the significant progress determination specified in § 490.109.

(b) The condition of bridges carrying the NHS, which includes on- and off-ramps connected to the NHS, shall be classified as Good, Fair, or Poor following the criteria specified in this paragraph. The assignment of a classification of Good, Fair, or Poor shall be based on the bridge's condition ratings for NBI Items 58—Deck, 59—Superstructure, 60—Substructure, and 62—Culverts. For the purposes of national performance measures under the NHPP, the method of assessment to determine the classification of a bridge will be the minimum of condition rating method (*i.e.*, the condition ratings for lowest rating of a bridge's 3 NBI Items, 58—Deck, 59—Superstructure, and 60—Substructure). For culverts, the rating of its NBI Item, 62—Culverts, will determine its classification. The bridges carrying the NHS which includes on- and off-ramps connected to the NHS

will be classified as Good, Fair, or Poor based on the following criteria:

(1) *Good*: When the lowest rating of the 3 NBI items for a bridge (Items 58—Deck, 59—Superstructure, 60—Substructure) is 7, 8, or 9, the bridge will be classified as Good. When the rating of NBI item for a culvert (Item 62—Culverts) is 7, 8, or 9, the culvert will be classified as Good.

(2) *Fair*: When the lowest rating of the 3 NBI items for a bridge is 5 or 6, the bridge will be classified as Fair. When the rating of NBI item for a culvert is 5 or 6, the culvert will be classified as Fair.

(3) *Poor*: When the lowest rating of the 3 NBI items for a bridge is 4, 3, 2, 1, or 0, the bridge will be classified as Poor. When the rating of NBI item for a culvert is 4, 3, 2, 1, or 0, the culvert will be classified as Poor.

(c) The bridge measures specified in § 490.407(c) shall be calculated for the applicable bridges per paragraph (a) that pertain to each target established by the State DOT or MPO in §§ 490.105(e) and 490.105(f), respectively, as follows:

(1) For § 490.407(c)(1), the measure for the percentage of bridges classified as in Good condition shall be computed and reported to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{g=1}^{\text{GOOD}} [\text{Length} \times \text{Width}]_{\text{Bridge } g}}{\sum_{s=1}^{\text{TOTAL}} [\text{Length} \times \text{Width}]_{\text{Bridge } s}}$$

Where:

GOOD = total number of the applicable bridges, where their condition is Good per paragraph (b)(1) of this section;

g = a bridge determined to be in Good condition per paragraph (b)(1) of this section;

Length = corresponding value of NBI Item 49—Structure Length for every applicable bridge;

Width = corresponding value of NBI Item 52—Deck Width or value of Item 32 Approach Roadway Width for culverts where the roadway is on a fill [*i.e.*, traffic does not directly run on the top slab (or wearing surface) of the culvert] and the headwalls do not affect the flow of traffic for every applicable bridge.

s = an applicable bridge per paragraph (b) of this section; and

TOTAL = total number of the applicable bridges specified in paragraph (b) of this section.

(2) For § 490.407(c)(2), the measure for the percentage of bridges classified as in Poor condition shall be computed and reported to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{p=1}^{\text{POOR}} [\text{Length} \times \text{Width}]_{\text{Bridge } p}}{\sum_{s=1}^{\text{TOTAL}} [\text{Length} \times \text{Width}]_{\text{Bridge } s}}$$

Where:

POOR = total number of the applicable bridges, where their condition is Poor per paragraph (b)(3) of this section;

p = a bridge determined to be in Poor condition per paragraph (b)(3) of this section;

Length = corresponding value of NBI Item 49—Structure Length for every applicable bridge;

Width = corresponding value of NBI Item 52—Deck Width or value of Item 32 Approach Roadway Width for culverts

where the roadway is on a fill [*i.e.*, traffic does not directly run on the top slab (or wearing surface) of the culvert] and the headwalls do not affect the flow of traffic for every applicable bridge.

s = an applicable bridge per paragraph (b) of this section; and

TOTAL = total number of the applicable bridges specified in paragraph (b) of this section.

(d) The measures identified in § 490.407(c) shall be used to establish targets in accordance with § 490.105 and

report targets and conditions described in § 490.107.

(e) The NBI Items included in this section are found in the Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges, which is incorporated by reference (see § 490.111).

§ 490.411 Establishment of minimum level for condition for bridges.

(a) State DOTs will maintain bridges so that the percentage of the deck area of bridges classified as Structurally Deficient does not exceed 10.0 percent. This minimum condition level is applicable to bridges carrying the NHS, which includes on- and off-ramps connected to the NHS within a State, and bridges carrying the NHS that cross a State border.

(b) For the purposes of carrying out this section and § 490.413, a bridge will

be classified as Structurally Deficient when one of its NBI Items, 58—Deck, 59—Superstructure, 60—Substructure, or 62—Culverts, is 4 or less, or when one of its NBI Items, 67—Structural Evaluation or 71—Waterway Adequacy, is 2 or less. Beginning with calendar year 2018 and thereafter, a bridge will be classified as Structurally Deficient when one of its NBI Items, 58—Deck, 59—Superstructure, 60—Substructure, or 62—Culverts, is 4 or less.

(c) For all bridges carrying the NHS, which includes on- and off-ramps connected to the NHS and bridges carrying the NHS that cross a State border, FHWA shall calculate a ratio of the total deck area of all bridges classified as Structurally Deficient to the total deck area of all applicable bridges for each State. The percentage of deck area of bridges classified as Structurally Deficient shall be computed by FHWA to the one tenth of a percent as follows:

$$100 \times \frac{\sum_{SD=1}^{\text{Structurally Deficient}} [\text{Length} \times \text{Width}]_{\text{Bridge SD}}}{\sum_{s=1}^{\text{TOTAL}} [\text{Length} \times \text{Width}]_{\text{Bridge s}}}$$

Where:

Structurally Deficient = total number of the applicable bridges, where their classification is Structurally Deficient per this section and § 490.413;

SD = a bridge classified as Structurally Deficient per this section and § 490.413;

Length = corresponding value of NBI Item 49—Structure Length for every applicable bridge;

Width = corresponding value of NBI Item 52—Deck Width

Beginning with calendar year 2018 and thereafter, Width = corresponding value of NBI Item 52—Deck Width or value of Item 32 Approach Roadway Width for culverts where the roadway is on a fill [i.e., traffic does not directly run on the top slab (or wearing surface) of the culvert] and the headwalls do not affect the flow of traffic for every applicable bridge.

s = an applicable bridge per this section and § 490.413; and

TOTAL = total number of the applicable bridges specified in this section and § 490.413.

(d) The FHWA will annually determine the percentage of the deck area of NHS bridges classified as Structurally Deficient for each State DOT and identify State DOTs that do not meet the minimum level of condition for NHS bridges based on data cleared in the NBI as of June 15 of each year. The FHWA will notify State DOTs of their compliance with 23 U.S.C. 119(f)(2) prior to October 1 of the year in which the determination was made.

(e) For the purposes of carrying out this section, State DOTs will annually submit their most current NBI data on highway bridges to FHWA no later than March 15 of each year.

(f) The NBI Items included in this section are found in the Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation's Bridges, which is incorporated by reference (see § 490.111).

§ 490.413 Penalties for not maintaining bridge condition.

(a) If FHWA determines for the 3-year period preceding the date of the determination, that more than 10.0 percent of the total deck area of bridges in the State on the NHS is located on bridges that have been classified as Structurally Deficient, the following requirements will apply.

(1) During the fiscal year following the determination, the State DOT shall obligate and set aside in an amount equal to 50 percent of funds apportioned to such State for fiscal year 2009 to carry out 23 U.S.C. 144 (as in effect the day before enactment of MAP-21) from amounts apportioned to a State for a fiscal year under 23 U.S.C. 104(b)(1) only for eligible projects on bridges on the NHS.

(2) The set-aside and obligation requirement for bridges on the NHS in a State in paragraph (a) of this section for a fiscal year shall remain in effect for each subsequent fiscal year until such time as less than 10 percent of the total deck area of bridges in the State on the NHS is located on bridges that have been classified as Structurally Deficient as determined by FHWA.

(b) The FHWA will make the first determination by October 1, 2016, and each fiscal year thereafter.

[Docket No. FHWA-2013-0054]

RIN 2125-AF54

National Performance Management Measures; Assessing Performance of the National Highway System, Freight Movement on the Interstate System, and Congestion Mitigation and Air Quality Improvement Program

AGENCY: Federal Highway Administration (FHWA), Department of Transportation (DOT).

ACTION: Final rule.

SUMMARY: This final rule is the third and last in a series of three related rulemakings that together establishes a set of performance measures for State departments of transportation (State DOT) and Metropolitan Planning Organizations (MPO) to use as required by the Moving Ahead for Progress in the 21st Century Act (MAP-21) and the Fixing America's Surface Transportation (FAST) Act. The measures in this third final rule will be used by State DOTs and MPOs to assess the performance of the Interstate and non-Interstate National Highway System (NHS) for the purpose of carrying out the National Highway Performance Program (NHPP); to assess freight movement on the Interstate System; and to assess traffic congestion and on-road mobile source emissions for the purpose of carrying out the Congestion Mitigation and Air Quality Improvement (CMAQ) Program. This third performance measure final rule also includes a discussion that summarizes all three of the national performance management measures

rules and the comprehensive regulatory impact analysis (RIA) to include all three final rules.

DATES: This final rule is February 17, 2017.

FOR FURTHER INFORMATION CONTACT: For technical information: Francine Shaw Whitson, Office of Infrastructure, (202) 366–8028; for legal information: Alla Shaw, Office of Chief Counsel, (202) 366–0740, Federal Highway Administration, 1200 New Jersey Avenue SE., Washington, DC 20590. Office hours are from 8 a.m. to 4:30 p.m. ET, Monday through Friday, except Federal holidays.

SUPPLEMENTARY INFORMATION:

Electronic Access and Filing

The notice of proposed rulemaking (NPRM) was published at 81 FR 23806 on April 22, 2016. A copy of the NPRM, all comments received, and all background material may be viewed online at <http://www.regulations.gov>. Electronic retrieval help and guidelines are available on the Web site. It is available 24 hours each day, 365 days each year. An electronic copy of this document may also be downloaded from the Office of the Federal Register's Web site at <http://www.ofr.gov> and the Government Publishing Office's Web site at <http://www.gpo.gov>.

I. Executive Summary

A. Purpose of the Regulatory Action

The MAP–21 (Pub. L. 112–141) transforms the Federal-aid highway program by establishing new requirements for performance management to ensure the most efficient investment of Federal transportation funds. Performance management increases the accountability and transparency of the Federal-aid highway program and provides a framework to

support improved investment decisionmaking through a focus on performance outcomes for key national transportation goals.

As part of performance management, recipients of Federal-aid highway funds will make transportation investments to achieve performance targets that make progress toward the following national goals:

- **Safety**—To achieve a significant reduction in traffic fatalities and serious injuries on all public roads.
- **Infrastructure condition**—To maintain the highway infrastructure asset system in a state of good repair.
- **Congestion reduction**—To achieve a significant reduction in congestion on the NHS.
- **System reliability**—To improve the efficiency of the surface transportation system.
- **Freight movement and economic vitality**—To improve the national freight network, strengthen the ability of rural communities to access national and international trade markets, and support regional economic development.
- **Environmental sustainability**—To enhance the performance of the transportation system while protecting and enhancing the natural environment.
- **Reduced project delivery delays**—To reduce project costs, promote jobs and the economy, and expedite the movement of people and goods by accelerating project completion through eliminating delays in the project development and delivery process, including reducing regulatory burdens and improving agencies' work practices.

The purpose of this final rule is to implement MAP-21 and FAST Act (PL 114-94) performance management requirements. Prior to MAP-21, there were no explicit requirements for State DOTs to demonstrate how their transportation program supported national performance outcomes. State DOTs were not required to measure condition or performance, establish targets, assess progress toward targets, or report on condition or performance in a nationally consistent manner that FHWA could use to assess the entire system. Without States reporting on the above factors, it is difficult for FHWA to examine the effectiveness of the Federal-aid highway program as a means to address surface transportation performance at a national level.

This final rule is one of several rulemakings to implement MAP-21's new performance management framework. The collective rulemakings will establish the regulations needed to more effectively evaluate and report on surface transportation performance across the Nation. This final rule will:

- Provide for greater consistency in the reporting of condition and performance;
- Establish specific national performance measures to be used to assess performance of the NHS, freight movement on the Interstate and CMAQ traffic congestion and on-road mobile source emissions;
- Require the establishment of targets that can be aggregated at the national level;
- Improve transparency by requiring consistent reporting on progress through a public reporting system;
- Require State DOTs to make significant progress toward meeting their targets; and
- Establish requirements for State DOTs that have not met or made significant progress toward achieving their NHPP and NHFP targets.

State DOTs and MPOs will be expected to use the information and data generated as a result of the new regulations to inform their transportation planning and programming decisions. The new performance aspects of the Federal-aid highway program that result from this rule will provide FHWA the ability to better communicate a national performance story and to assess the impacts of Federal funding investments more reliably. The FHWA is in the process of creating a new public Web site to help communicate the national performance story and display State DOT performance reports. The Web site will likely include infographics, tables, charts, and descriptions of the performance data that State DOTs will be reporting to FHWA.

The FHWA is required to establish performance measures to assess performance in 12 areas¹ generalized as follows: (1) Serious injuries per vehicle miles traveled (VMT); (2) fatalities per VMT; (3) number of serious injuries; (4) number of fatalities; (5) pavement condition on the Interstate System; (6) pavement condition on the non-Interstate NHS; (7) bridge condition on the NHS; (8) performance of the Interstate System; (9) performance of the non-Interstate NHS; (10) freight movement on the Interstate System; (11) traffic congestion; and (12) on-road mobile source emissions. This rulemaking is the third of three that establish performance measures for State DOTs and MPOs to use to carry out Federal-aid highway programs and to assess performance in each of these 12 areas. This final rule establishes

¹ These areas are listed within 23 U.S.C. 150(c), which requires the Secretary to establish measures to assess performance or condition.

national performance measures for the NHPP, freight movement, and the CMAQ program (numbers 8 through 12 in the above list). See Table 1 for a summary of all measures.

The final measures in this rule have been adjusted in response to comments, and those changes are summarized in Section I.B of the Executive Summary. Details about data requirements and calculation methodologies for each measure can be found in Section VI.

Three measures are established for assessing the performance of the NHS under the NHPP. Two measures assess reliability: (1) Percent of Person-Miles Traveled on the Interstate System That Are Reliable (the Interstate Travel Time Reliability measure); and (2) Percent of Person-Miles Traveled on the Non-Interstate NHS That Are Reliable (the Non-Interstate NHS Travel Time Reliability measure). Together they are the Travel Time Reliability measures. Both of these measures assess Level of Travel Time Reliability (LOTTR), defined as the ratio of the 80th percentile travel time to a "normal" travel time (50th percentile). Data are derived from the travel time data set using either the National Performance Management Research Data Set (NPMRDS) or equivalent. A third measure, Percent Change in Tailpipe CO₂ Emissions on the NHS from the Calendar Year 2017, assesses environmental performance. This measure is calculated using data on fuel use and VMT.

The performance measure to assess freight movement on the Interstate is Percentage of the Interstate System Mileage providing for Reliable Truck Travel Times, or Truck Travel Time Reliability (TTTR) Index (the Freight Reliability measure). The measure also uses the Travel Time Data Set of NPRMDS, but unlike the LOTTR which uses a threshold to determine reliability, TTTR Index is expressed as an average for the entire applicable area.

Three measures are established under the CMAQ program (the CMAQ measures) including two measures for traffic congestion: (1) Annual Hours of Peak-Hour Excessive Delay Per Capita (the PHED measure); and (2) Percent of Non-SOV Travel where SOV stands for single-occupancy vehicle. Data for these two measures are derived from the travel time data set of NPMRDS. The second measure is a new measure developed to recognize the role of lower-emissions modes in meeting air quality goals. State DOTs and MPOs have three options for providing data for this measure.

The third measure under the CMAQ program is Total Emissions Reduction.

This measure uses data from the CMAQ Public Access System to calculate total emission reductions for applicable

criteria pollutants or precursors. A summary of all the national

performance management measures rulemakings are listed in Table 1 below.

TABLE 1—SUMMARY OF RULEMAKINGS TO IMPLEMENT THE NATIONAL PERFORMANCE MANAGEMENT MEASURE RULES

Rulemaking	23 CFR part 490 section	Final performance measures	Measure applicability
Safety PM Final Rule.	490.207(a)(1)	Number of fatalities	All public roads.
	490.207(a)(2)	Rate of fatalities	All public roads.
	490.207(a)(3)	Number of serious injuries	All public roads.
	490.207(a)(4)	Rate of serious injuries	All public roads.
	490.207(a)(5)	Number of non-motorized fatalities and non-motorized serious injuries.	All public roads.
Infrastructure PM Final Rule	490.307(a)(1)	Percentage of pavements of the Interstate System in Good condition.	The Interstate System.
	490.307(a)(2)	Percentage of pavements of the Interstate System in in Poor condition.	The Interstate System.
	490.307(a)(3)	Percentage of pavements of the non-Interstate NHS in Good condition.	The non-Interstate NHS.
	490.307(a)(4)	Percentage of pavements of the non-Interstate NHS in Poor condition.	The non-Interstate NHS.
	490.407(c)(1)	Percentage of NHS bridges classified as in Good condition	NHS.
System Performance PM Final Rule.	490.407(c)(2)	Percentage of NHS bridges classified as in Poor condition ..	NHS.
	490.507(a)(1)	Percent of the Person-Miles Traveled on the Interstate That Are Reliable.	The Interstate System.
	490.507(a)(2)	Percent of the Person-Miles Traveled on the Non-Interstate NHS That Are Reliable.	The non-Interstate NHS.
	490.507(b)	Percent Change in Tailpipe CO ₂ Emissions on the NHS Compared to the Calendar Year 2017 Level.	NHS.
	490.607	Truck Travel Time Reliability (TTTR) Index	The Interstate System.
	490.707(a)	Annual Hours of Peak Hour Excessive Delay Per Capita	The NHS in urbanized areas with a population over 1 million for the first performance period and in urbanized areas with a population over 200,000 for the second and all other performance periods that are also in nonattainment or maintenance areas for ozone (O ₃), carbon monoxide (CO), or particulate matter (PM ₁₀ and PM _{2.5}).
	490.707(b)	Percent of Non-SOV Travel.	
	490.807	Total Emissions Reduction	
			All projects financed with funds from the 23 U.S.C. 149 CMAQ program apportioned to State DOTs in areas designated as non-attainment or maintenance for ozone (O ₃), carbon monoxide (CO), or particulate matter (PM ₁₀ and PM _{2.5}).

In addition, this final rule establishes the process for State DOTs and MPOs to establish and report targets and the process that FHWA will use to assess the progress State DOTs have made in achieving targets. State DOTs will be required to establish performance targets and assess performance in the above mentioned 12 areas established by MAP-21, and FHWA will assess ² their progress toward meeting targets in

10 of these areas ³ in accordance with MAP-21 and the FAST Act. State DOTs that fail to meet or make significant progress toward targets in a biennial performance reporting period will be required to document the actions they will undertake to achieve their targets in

³ Serious injuries per vehicle VMT; fatalities per VMT; number of serious injuries; number of fatalities; pavement condition on the Interstate System; pavement condition on the non-Interstate NHS; bridge condition on the NHS; performance of the Interstate System; performance of the non-Interstate NHS under MAP-21; and freight movement on the Interstate System under the FAST Act.

their next biennial performance report. Failure to make progress in the safety metrics requires additional actions as outlined in the published Safety final rule.

The FHWA received extensive and substantive comments on the NPRM. The FHWA made significant alterations to the measures in response to these comments, and a summary of major issues raised can be found at the beginning of Section V, with detailed responses following. The FHWA also recognizes that data collection and analytic capacity are not yet developed

² 23 U.S.C. 148(i) and 23 U.S.C. 119(e)(7).

enough to respond effectively to many commenters' suggestions, particularly in measuring multimodal performance. Therefore, FHWA is working to develop more sophisticated performance metrics and may issue an updated rulemaking on performance measures related to person throughput and multi-modal performance in the future, following completion of ongoing research regarding multimodal system performance measures in Fall 2018.

Lastly, FHWA recognizes that implementation of the performance management requirements in this final rule will evolve with time for a variety of reasons such as: The introduction of new technologies that allow for the collection of more nationally consistent and/or reliable performance data; shifts in national priorities for the focus of a goal area; new federal requirements; or the emergence of improved approaches to measure condition/performance in supporting investment decisions and national goals. The FHWA is committed to performing a retrospective review of this rule after the first performance period, to assess the effectiveness of the requirements to identify any necessary changes to better support investment decisions through performance-based planning and programming and to ensure the most efficient investment of Federal transportation funds. In implementation of this rule, FHWA realizes that there are multiple ways that State DOTs and MPOs can make decisions to achieve more efficient and cost effective investments; as part of a retrospective review, FHWA will also utilize implementation surveys to identify how agencies complying with

the rule are developing their programs and selecting their projects to achieve targets.

B. Summary of the Major Changes Made to the Regulatory Action in Question

This final rule retains the majority of the major provisions of the NPRM, but it makes the following significant changes.

- Removing the proposed NHFP measure for percentage of the Interstate congested.
- Merging the proposed peak-hour travel time measure under NHPP with the proposed excessive delay measure under CMAQ Traffic Congestion into one measure under CMAQ, the PHED measure. This new measure focuses on excessive delay experienced during peak hours in applicable urbanized areas.
- Introducing two new measures in response to extensive public comments:
 - Under NHPP System Performance—a new measure to assess system performance, specifically the percent change in CO₂ emissions from the reference year 2017, generated by on-road mobile sources on the NHS (the GHG measure). All State DOTs and MPOs that have NHS mileage in their State geographic boundaries and metropolitan planning areas, respectively, will be required to establish targets and report on progress. The FHWA will assess every 2 years to determine if a State DOT has made significant progress toward achieving their targets.
 - Under CMAQ Traffic Congestion—a new measure to assess modal share, specifically the Percent of Non-SOV

Travel measure. State DOTs and MPOs are provided the opportunity to use localized surveys or measurements to report on this measure and will be encouraged to report to FHWA any data not currently available in national sources (e.g., bike counts).

- Changing the weighting of the travel time measures from system miles to person-miles traveled, focusing on bus, auto, and truck occupancy levels, and providing opportunities for State DOTs and MPOs to capture more specific local occupancy levels for particular corridors or areas.

- These changes result in one fewer measure than proposed in the NPRM, for a total of 7 measures. Now, four of these are derived from vehicle travel times, three of which reflect all people traveling on the system, a change requested by many commenters.

- Phasing in expanded applicability of the CMAQ Traffic Congestion measures beginning with urbanized areas with a population over 1 million in the first performance period and expanding to urbanized areas with a population over 200,000 beginning in the second performance period. These measures are to carry out the CMAQ program; therefore, the areas will be limited to urbanized areas that contain any part of nonattainment or maintenance areas for one or more pollutants listed in 23 U.S.C. 149 (ozone, carbon monoxide, or particulate matter).

- Taking steps to simplify and otherwise respond to suggestions regarding the data processing and calculation of the measures.

TABLE 2—SUMMARY OF FINAL MEASURES IN THE THIRD PERFORMANCE MEASURE FINAL RULE

Measure groups (program area)	Performance measures	Measure/target applicability	Metric data source & collection frequency	Metric
NHPP	Percent of Person-Miles Traveled on the Interstate That Are Reliable. Percent of Person-Miles Traveled on the Non-Interstate NHS That Are Reliable. Percent Change in CO ₂ Emissions on the NHS Compared to the Calendar Year 2017 Level.	Mainline of the Interstate System within a State or each metropolitan planning area. Mainline of the non-Interstate NHS within a State or each metropolitan planning area. NHS within a State or each metropolitan planning area.	All traffic/vehicles data in NPMRDS or Equivalent—every 15-minutes. All traffic/vehicles data in NPMRDS or Equivalent—every 15-minutes. Annual state total fuel sales data from Highway Statistics and VMT estimates on NHS and all public roads from HPMS.	Level of Travel Time Reliability (LOTTR). Level of Travel Time Reliability (LOTTR). Annual Total Tailpipe CO ₂ Emissions on the NHS.
Freight movement on the Interstate System measure (NHFP).	Truck Travel Time Reliability (TTTR) Index.	Mainline of the Interstate System within a State or each metropolitan planning area.	Truck data in NPMRDS or equivalent data set—every 15—minutes.	TTTR Index.

TABLE 2—SUMMARY OF FINAL MEASURES IN THE THIRD PERFORMANCE MEASURE FINAL RULE—Continued

Measure groups (program area)	Performance measures	Measure/target applicability	Metric data source & collection frequency	Metric
CMAQ	Annual Hours of Peak-Hour Excessive Delay Per Capita.	Mainline of NHS in urbanized areas with a population over 1M/200k in nonattainment or maintenance for any of the criteria pollutants under the CMAQ program.	All traffic/vehicles data in NPMRDS or equivalent data set—every 15 minutes (bus, car and truck volumes in HPMS; occupancy factors published by FHWA. ACS, local survey, or local counts (includes bike/pedestrian counts).	Total Peak-Hour Excessive Delay person-hours.
	Percent of N SOV Travel.	Urbanized areas with a population over 1M/200k in nonattainment or maintenance for any of the criteria pollutants under the CMAQ program.	ACS, local survey, or local counts (includes bike/pedestrian counts).	n/a.
	Total Emission Reductions.	All nonattainment and maintenance areas for CMAQ criteria pollutants.	CMAQ Public Access System	n/a.

The FHWA updated these and other elements in this final rule based on the review and analysis of comments received. For additional detail on all the changes FHWA made in the final rule, please refer to Sections V and VI of this document. The FHWA has also prepared a comment response document available on the docket for this rulemaking. The following summarizes the regulatory impact analysis for the final rule. Section references below refer to sections of the regulatory text for title 23 of the Code of Federal Regulations (23 CFR).

This final rule adds to subpart A, general information applicable to part 490, to include requirements for target establishment, reporting on progress, and how determinations would be made on whether State DOTs have made significant progress toward NHPP targets. Subpart A also includes definitions and clarifies terminology associated with target establishment, reporting, and making significant progress. Section 490.105 describes the process State DOTs and MPOs must use to establish targets. State DOTs will establish their first statewide targets 1 year after the effective date of this rule. The MPOs have up to 180 days after State DOTs establish their targets to establish their own targets. The FHWA has placed a timeline on the docket that illustrates how this transition could be implemented.

C. Costs and Benefits

The FHWA estimated the incremental costs associated with the new requirements that represent a change to current practices of USDOT, State DOTs, and MPOs.⁴ The FHWA derived the costs of the new requirements by

assessing the additional capital needed and the expected increase in the level of labor effort for FHWA, State DOTs, and MPOs to standardize and update data collection and reporting systems, and establish and report targets.

The FHWA sought opinions from subject matter experts (SMEs) on NHS performance, freight movement, and traffic congestion and emissions to estimate impacts of the final rule. Cost estimates were developed based on information received from SMEs.

To estimate costs, FHWA multiplied the level of effort, expressed in labor hours, with a corresponding loaded wage rate that varied by the type of laborer needed to perform the activity.⁵ Where necessary, capital costs were also included. Many of these measures rely on the use and availability of NPMRDS data provided by FHWA for use by State DOTs and MPOs. Because there is uncertainty regarding the ongoing funding of NPMRDS by FHWA, FHWA estimated the cost of the final rule under two scenarios. First, assuming that FHWA provides State DOTs and MPOs with the required data from NPMRDS, the 10-year undiscounted incremental costs to comply with this rule are \$144.0 million (Scenario 1). Alternatively, under “worst case” conditions where State DOTs will be required to independently acquire the necessary data, the 10-year undiscounted incremental costs to comply with this rule are \$205.5 million (Scenario 2). The total 10-year undiscounted cost is approximately 43 percent higher under Scenario 2 than under Scenario 1.

The final rule’s 10-year undiscounted cost (\$144.0 million in Scenario 1 and \$205.5 million in Scenario 2, both in 2014 dollars) decreased relative to the

proposed rule (\$165.3 million in Scenario 1 and \$224.5 million in Scenario 2, both in 2014 dollars). The FHWA made several changes that affected the cost estimate. These changes include updating costs to 2014 dollars from 2012 dollars and labor costs to reflect current Bureau of Labor Statistics (BLS) data. In addition, FHWA revised the final rule Regulatory Impact Analysis (RIA), found in the docket of this final rulemaking, to reflect: (1) The elimination of three of the proposed performance measures (removing the proposed NHPP measure for percent of the Interstate congested and merging two proposed peak-hour travel time measures under NHPP with the proposed excessive delay measure under CMAQ Traffic Congestion into one measure under CMAQ); (2) the elimination of one of the proposed performance metrics (for the Total Emissions Reductions measure); (3) the elimination of costs for the Initial Performance Report, which State DOTs have already submitted to FHWA; (4) the addition of two new performance measures (Percent of Non-SOV Travel measure and the GHG measure; and (5) the adjustment of level of effort and number of affected entities consistent with the new requirements under the final rule and updated population estimates.

The FHWA expects that the rule will result in significant benefits, although they are not easily quantifiable. Specifically, the rule will allow for more informed decisionmaking at a Federal, State, and regional level for NHS performance-, freight movement-, or congestion and emissions-related projects, programs, and policy choices. The rule will also yield greater accountability because MAP-21 mandated reporting increases visibility

⁵ Bureau of Labor Statistics Employee Cost Index, 2014.

and transparency. The data reported to FHWA by State DOTs will be available to the public and will be used to communicate a national performance story.

The FHWA performed break-even analyses as the primary approach to quantify benefits. The FHWA identified four variables (or outcomes) for which to estimate break-even thresholds: (1) Number of passenger travel hours, (2) tons of transportation-related carbon dioxide emissions, (3) number of truck travel hours, and (4) kilograms of on-road mobile source emissions, comprising volatile organic compounds, nitrogen oxide, particulate matter, and carbon monoxide. The FHWA selected these variables because it is reasonable to assume that the performance measures will influence each of these variables relative to current baseline levels.

FHWA assumes that there will be no overall change in the total amount of expenditure on highway projects by State DOTs and MPOs. Instead, FHWA assumes that States and MPOs will choose a different mix of projects or delay some projects, relative to what they would have done without the rule, in order to fund projects that help to meet performance goals. There will be some costs to delaying or foregoing some projects, but their will be benefits from projects that are prioritized to meet performance goals. To perform a breakeven analysis, FHWA considered both these benefits and costs and considered how large of a net gain in benefits would be needed to offset the costs of the rule.

After identifying these variables, FHWA combined the final rule costs associated with the performance measures that will influence each variable. The FHWA expects that implementation of four of the rule's performance measures (the Travel Time Reliability measures, the PHED measure and the Percent of Non-SOV Travel measure) will influence passenger travel hours. The FHWA expects that implementation of the GHG measure will influence tons of carbon dioxide emissions. The FHWA expects that implementation of the Freight Reliability measure will influence number of truck travel hours. The FHWA expects that implementation of the performance measure for Total Emissions Reduction will influence kilograms of on-road mobile source emissions.

Two variables (number of passenger travel hours and number of truck travel hours) are associated with performance measures whose costs differ under two

scenarios feasible under the final rule; in Scenario 1, FHWA provides travel time data to State DOTs, and in Scenario 2, State DOTs acquire the necessary data independently. To account for this, FHWA performed the break-even analyses twice for these two variables (*i.e.*, once using Scenario 1 costs, and a second time using Scenario 2 costs). The costs associated with the remaining two variables (tons of carbon dioxide emissions and kilograms of on-road mobile source emissions) do not change under Scenarios 1 and 2; therefore, only one break-even threshold is calculated for each analysis. In all, FHWA presents six break-even thresholds: (1) Number of passenger travel hours under Scenario 1, (2) number of passenger travel hours under Scenario 2, (3) tons of carbon dioxide emissions, (4) number of truck travel hours under Scenario 1, (5) number of truck travel hours under Scenario 2, and (6) kilograms of on-road mobile source emissions.

The results show that the rule must result in the reduction of approximately 3.7 million hours of passenger car travel under Scenario 1 and 5.6 million hours under Scenario 2, 312,000 tons of carbon dioxide emissions, 980,000 hours of freight travel under Scenario 1 and 1.6 million hours under Scenario 2, and 29 million kilograms of total on-road mobile source emissions over 10 years: To generate enough benefits to outweigh the cost of the rule. The FHWA believes that the benefits of this rule will surpass this threshold. Therefore, the benefits of the rule are anticipated to outweigh the costs.

Relative to the proposed rule, the total number of hours of passenger travel time needed to be saved over the period of analysis increased for the break-even analysis covering the Travel Time Reliability measures and the CMAQ Traffic Congestion measures. The undiscounted cost of these performance measures in the final rule decreased from \$88.4 million over 11 years (in 2012 dollars) in the proposed rule to \$86.1 million over 10 years (in 2014 dollars) in the final rule under Scenario 1. Under Scenario 2, costs increased from \$123.9 million over 11 years (in 2012 dollars) in the proposed rule to \$132.2 million over 10 years (in 2014 dollars) in the final rule. The Percent of Non-SOV Travel measure was added to the final rule, but the additional costs of this requirement were outweighed by the cost reductions associated with the removal of the peak-hour travel time reliability performance measures. For the final rule, FHWA added a break-even threshold for the GHG measure

because it was not a part of the proposed rule. The undiscounted cost for Scenario 2 increased because a greater share of the travel time dataset costs under \$490.103 in Scenario 2 was attributable to these Travel Time Reliability measures and the CMAQ Traffic Congestion measures. Specifically, the share of data requirements costs is driven by the proportion of performance measures in each break-even analysis, which for these performance measures increased from 60 percent in the proposed rule to 75 percent in the final rule. In addition, moving from an 11-year period of analysis to a 10-year period of analysis affected the break-even point. The average annual number of hours of travel that need to be reduced increased from approximately 350,000 in the proposed rule under Scenario 1 to 370,000 in the final rule, and from approximately 500,000 in the proposed rule under Scenario 2 to 560,000 in the final rule.

The threshold for the NHFP performance measure break-even analysis significantly decreased in the final rule. This change was largely due to the elimination of the proposed Average Truck Speed performance measure. The undiscounted cost of freight performance provisions in the final rule is \$25.8 million (in 2014 dollars) under Scenario 1 and \$41.1 million (in 2014 dollars) under Scenario 2, compared to \$46.9 million (in 2012 dollars) under Scenario 1 and \$70.6 million (in 2012 dollars) under Scenario 2 in the proposed rule. Average annual number of hours of travel that need to be reduced decreased from 168,044 in the proposed rule to 98,224 in the final rule under Scenario 1, and from 252,896 hours in the proposed rule to 156,874 hours in the final rule under Scenario 2.

Regarding the break-even analysis for Total Emissions Reduction, units were changed from tons to kilograms based on revised rule language. The undiscounted costs of total emissions reduction decreased from \$30.0 million (in 2012 dollars) in the proposed rule to \$18.2 million (in 2014 dollars) in the final rule. The average annual amount of total emissions to be reduced decreased from 4,417 short tons (approximately 4 million kilograms) in the proposed rule to 2.9 million kilograms in the final rule.

Table 2 displays the Office of Management and Budget (OMB) A-4 Accounting Statement as a summary of the cost and benefits calculated for this rule.

III. Background

The DOT implemented MAP-21's performance requirements through several rulemakings. As a summary, these rulemaking actions are listed below and should be referenced for a complete picture of performance management implementation. The summary below describes the main provisions in each rulemaking.

On March 15, 2016, FHWA published a final rule (81 FR 13882) covering the safety-related elements of the Federal-aid highway performance measures rulemaking that included the following: (1) The definitions that are applicable to the new 23 CFR part 490; (2) the process to be used by State DOTs and MPOs to establish their safety-related performance targets that reflect the safety measures; (3) a methodology to be used to assess State DOTs' compliance with the target achievement provision specified under 23 U.S.C. 148(i); and (4) the process State DOTs must follow to report on progress toward meeting or making significant progress toward safety-related performance targets. The final rule also included a discussion of the collective rulemaking actions FHWA intends to take to implement MAP-21 and FAST Act performance related provisions. Elsewhere in this issue of the **Federal Register**, FHWA published a second performance measures final rule which includes the following: (1) Final national performance management measures for the condition of NHS pavements and bridges; (2) the process to be used by State DOTs and MPOs to establish their pavement and bridge condition related performance targets that reflect the final measures; (3) the process State DOTs must follow to report on progress toward meeting or making significant progress toward meeting pavement and bridge condition related performance targets; (4) a methodology to be used to assess State DOTs' compliance with the target achievement provision specified under 23 U.S.C. 148(i); and (5) the minimum levels for the condition of pavement on the Interstate System and bridges carrying the NHS, which includes on- and off-ramps connected to the NHS.

The FHWA published the third national performance management measures NPRM on April 22, 2016, 81 FR 23806. In this NPRM, FHWA proposed national measures for the remaining areas under 23 U.S.C. 150(c)

that were not discussed under the first and second measure rules. The third rulemaking effort proposed performance measures to assess: (1) The performance of the Interstate System and non-Interstate NHS for the purpose of carrying out the NHPP; (2) freight movement on the Interstate System; and (3) traffic congestion and on-road mobile source emissions for the purpose of carrying out the CMAQ program. In addition, the NPRM proposed State DOT and MPO target establishment requirements for the Federal-aid highway program and performance progress reporting requirements and timing.

When FHWA began implementation of MAP-21, the three related Federal-aid highway performance measure rules were proposed to be published at the same time to allow for a single, common effective date for all three rules. The process to develop and implement all of the Federal-aid highway performance measures required in MAP-21, however, has been lengthy. In light of this, each of the three Federal-aid highway performance measures rules will have individual effective dates. The FHWA expects that even though each rule sets its respective effective date, the compliance schedule for all the rules will be aligned through a common performance period and reporting requirements. A timeline for Biennial Performance Reports is shown in Figure 1 in § 490.105(e)(1).

Although FHWA believes that individual implementation dates will help State DOTs and MPOs transition to performance based planning, FHWA will provide guidance to State DOTs and MPOs on how to carry out the new performance requirements to lessen any potential burden of staggered effective dates.

The FHWA also commits to assist State DOTs and MPOs as they take steps to manage and improve the performance of the highway system by implementing the new rules. As a Federal agency, FHWA is in a unique position to review and share strategies that can improve performance. The FHWA will continue to provide technical assistance, technical tools, and guidance to State DOTs and MPOs to assist them in making performance-based decisions. The FHWA intends to engage at a local and national level to provide resources and assistance to identify opportunities to improve performance and to assist State DOT and MPO compliance with the performance-related regulations. The FHWA technical assistance activities will include conducting national research studies, improving analytical modeling tools, identifying

and promoting best practices, training classes and workshops, preparing guidance materials, and developing data quality assurance tools.

IV. Summary of the Notice of Proposed Rulemaking

This NPRM was published on April 22, 2016 (81 FR 23806). The NPRM proposed a set of national measures for State DOTs to use to assess the performance of the Interstate and non-Interstate NHS for the purpose of carrying out the NHPP; to assess freight movement on the Interstate System; and to assess traffic congestion and on-road mobile source emissions for the purpose of carrying out the CMAQ Program.

After consulting with State DOTs, MPOs, and other stakeholders and a review of nationally recognized reports, FHWA proposed eight national performance measures in these areas. To support the new measures, the NPRM proposed to establish standardized data requirements that prescribed State DOTs' travel time and emissions data practices. State DOTs and MPOs would use the National Performance Management Research Data Set (NPMRDS) to calculate the travel time and speed-related metrics, although the NPRM offered flexibility to State DOTs and MPOs to use alternative travel time datasets with FHWA's approval. For Total Emission Reduction measure, the NPRM required State DOTs and affected MPOs to use data included in the existing CMAQ Public Access System.

The NPRM also proposed to establish the processes for State DOTs and MPOs to establish and report progress toward achieving targets, and the process for FHWA to determine whether State DOTs have made significant progress in achieving targets. The FHWA selected the measures, data requirements, and related processes proposed in the NPRM after preliminarily determining that they represented the best choices for achieving consistency among State DOTs and MPOs in compiling accurate system performance, freight movement, traffic congestion, and on-road mobile source emissions performance information, following processes for target setting, and reviewing progress toward targets. The FHWA expected the proposed measures to enhance accountability and support a strong national focus on maintaining and improving the condition and performance of the Nation's highways, while minimizing additional burden on State DOTs and MPOs and maintaining reasonable flexibility for State DOTs and MPOs as they manage risk, differing priorities, and fiscal constraints. Lastly, FHWA anticipated that the proposed

measures could be implemented in the timeframe required under MAP-21, without imposing excessive burden on State DOTs.

System Performance Measures

The four system performance measures proposed in the NPRM were: (1) Percent of the Interstate System Providing for Reliable Travel; (2) Percent of the Interstate System Where Peak Hour Travel Times Meet Expectations; (3) Percent of the Non-Interstate NHS Providing for Reliable Travel; and (4) Percent of the Non-Interstate NHS Where Peak Hour Travel Times Meet Expectations.

System Performance Data Requirements and Metrics

In the NPRM, FHWA proposed calculating the performance measures using two performance metrics: The LOTTR metric and the Peak Hour Travel Time Ratio (PHTTR) metric. Under the proposal, State DOTs and MPOs would be required to calculate these metrics for all applicable roadway segments for the applicable time periods and report them to FHWA annually.

The NPRM also proposed that State DOTs coordinate with MPOs in order to establish and submit reporting segments to be used as the basis for calculating and reporting metrics to the FHWA and for State DOTs and MPOs to calculate the measures to assess Interstate System and non-Interstate NHS performance.

Calculation of System Performance Measures

The FHWA designed the proposed system performance measures to reflect a percentage of the system, by length, operating at a specified level of performance. In the NPRM, FHWA proposed a threshold level that represented reliable travel to highway users of LOTTR of 1.50. This LOTTR level represented the difference between the longer travel times (80th percentile) observed on a roadway segment and those that are normal travel times (50th percentile). For PHTTR, a threshold level of 1.50 represented peak hour travel times that meet expectations of State DOTs, MPOs, and local operating agencies. This PHTTR level represents a condition where observed (or estimated) travel times in large urbanized areas are no more than 50 percent higher than what would be desired for the roadway, as identified by the State DOT and MPO.

Freight Movement on the Interstate System Measures

The two freight movement measures proposed in the NPRM were: (1) Percent

of the Interstate System Mileage Providing for Reliable Truck Travel Time and (2) Percent of the Interstate System Mileage Uncongested.

Freight Movement on the Interstate System Data Requirements and Metrics

The FHWA proposed determining performance measures for freight movement using two metrics: TTTR and the Average Truck Speed metrics. For the TTTR metric, FHWA proposed having the State DOTs use the same basic method as discussed for the LOTTR metric to calculate truck travel time reliability. State DOTs also would calculate the Average Truck Speed metric for each reporting segment, which would be derived from truck travel speeds contained in the NPMRDS travel time data set.

Calculation of Freight Movement on the Interstate System Measures

The FHWA designed the proposed freight movement performance measures to reflect a percentage of the system, by length, operating at a specified level of performance. The NPRM proposed establishing the truck travel time reliability threshold at 1.50 to represent the level at which truck travel times become unreliable. This level represents a condition where travel time could be no more than 50 percent longer than what would be expected during normal travel time conditions. For average truck speed, the NPRM proposed that any travel speeds occurring below 50 mph would be representative of congested conditions for freight flow.

Traffic Congestion Measure

The proposed traffic congestion measure was Annual Hours of Excessive Delay Per Capita.

Traffic Congestion Data Requirements and Metric

The NPRM proposed one metric for traffic congestion: Total Excessive Delay (as measured in vehicle-hours) for each applicable reporting segment on the NHS. To develop the metric, the NPRM proposed that State DOTs with large urbanized areas that contain nonattainment or maintenance areas for any of the criteria pollutants under the CMAQ program use a travel time data set like NPMRDS (as is required for the system performance and freight movement performance measures). The NPRM proposed two threshold travel speeds to indicate when operating conditions have deteriorated to the point that excessive travel time delays would occur. Any measured travel speeds below the threshold would

represent the operating condition level that would result in excessive delays. These thresholds were 35 mph for Interstates, freeways, or expressways and 15 mph for all other NHS roadways.

Using these thresholds and travel time segment lengths, a State DOT would determine the Excessive Delay Threshold Travel Time for each travel time segment to represent the time that it could take for a vehicle to traverse the reporting segment before excessive delay would occur. The excessive delay would be determined by comparing the recorded average travel time to the Excessive Delay Threshold Travel Time for the corresponding segment.

Calculation of Traffic Congestion Measure

The proposed traffic congestion performance measure would be calculated by summing the total excessive delay of all reporting segments in the applicable area and then dividing this total by the population for the applicable area.

On-Road Mobile Source Emissions Measures

The proposed on-road mobile source emissions measure was Total Tons of Emissions Reduced from CMAQ Projects for Applicable Criteria Pollutants and Precursors.

On-Road Mobile Source Emissions Data Requirements and Metric

Under the NPRM, State DOTs and MPOs would calculate the annual emission reductions for projects reported to the CMAQ Public Access System in a Federal fiscal year. The metric would be calculated for each CMAQ-funded project and for each applicable criteria pollutant and precursor. The proposed method would convert the emissions reductions reported in the CMAQ Public Access System from units of kg per day to short tons per year. The emissions reductions would be summed for all projects within the applicable reporting area, by criteria pollutant or precursor, for a Federal fiscal year.

Calculation of On-Road Mobile Source Emissions Measure

Under the NPRM, State DOTs and MPOs would calculate on-road mobile source emissions reductions by summing the annual tons of emissions reduced by CMAQ projects by criteria pollutant, using the 2- and 4-years of available data from the Public Access System.

Potential GHG Performance Measure

The NPRM also sought comment on whether and how to establish a CO₂ emissions measure in the final rule. The NPRM posed questions to the public on how GHG emissions could be estimated and used to inform planning and programming decisions to reduce long term emissions. The NPRM indicated that a potential GHG emissions performance measure would be best measured as the total annual tons of CO₂ from all on-road mobile sources. The FHWA asked for comment on the potential establishment and effectiveness of a GHG measure, and on various considerations in the design of a measure.

Performance Targets

The NPRM described a process to be used by State DOTs and MPOs to establish quantifiable statewide performance targets to be achieved over a 4-year performance period, with the first performance period starting in 2018. In the NPRM, FHWA proposed that a State DOT or MPO could consider a number of factors (e.g., funding availability and local transportation priorities) that could impact the targets they ultimately establish. The FHWA discussed the statutory requirement that State DOTs establish 2- and 4-year targets for the eight national performance measures to assess performance of the Interstate and non-Interstate NHS for the purpose of carrying out the NHPP, freight movement on the Interstate system, traffic congestion, and on-road mobile source emissions within 1 year after the effective date of the rule. The MPOs would establish targets by either supporting the State DOT's statewide target, or defining a target unique to the metropolitan planning area each time the State DOT establishes a target. In accordance with MAP-21, the NPRM proposed providing MPOs with an additional 180-day period to set targets following the date on which the State DOT established their targets.

State DOT and MPO Reporting

The NPRM proposed that State DOTs submit biennial reports to FHWA on the condition and performance of the NHS. The FHWA proposed that State DOTs submit their targets in a baseline report at the beginning of each performance period and report progress in achieving targets at the midpoint and end of the performance period. State DOTs would be allowed to adjust their 4-year target at the midpoint of the performance period. The MPOs would not be required to provide separate reporting to

FHWA. However, State DOTs and MPOs would need to agree on a reporting process as part of their Metropolitan Planning Agreements.

Determination of Significant Progress

The NPRM proposed the method for FHWA to determine if State DOTs achieved significant progress toward their target based on an analysis of estimated condition/performance and measured condition/performance of each of the targets. If applicable, State DOTs could have the opportunity to discuss why targets were not achieved or significant progress was not made. If a State DOT failed to achieve significant progress, then the State DOT would be required to document in their next biennial performance report, and encouraged to document sooner, the actions they would undertake to achieve their targets.

V. Response to Comments

This final rule is based on FHWA's review and analysis of comments received. The FHWA received 8889 letters to the docket, including letters from 43 State DOTs and local government agencies, more than 100 associations and advocacy groups, over 7800 individuals and consultants, and various other government agencies as well as 3 letters cosigned by 19 U.S. Senators. Of all the letters to the docket, 95 percent specifically addressed a request for a multimodal performance measures and greenhouse gas performance measure or both. Given the large number of comments received, FHWA has decided to organize the response to comments in the following manner. This section of the preamble provides a response to the most significant issues raised in the comments received, organized by summarizing and responding to comments that raise significant issues applicable to the NPRM and then those that raise issues applicable to specific subparts of the rule. Responses to all other comments (*i.e.*, comments deemed less significant) are located in a separate comment/response document posted in the docket for this rulemaking.

A. Significant Issues Raised in Comments

The following summarizes the most significant issues raised in the comments to the NPRM and describes how FHWA has addressed these issues. More specific detail regarding these issues is provided in the sections that follow (Sections V–B through V–F).

1. Summary of Significant Issues Raised in the Comments

The NPRM Was Too Focused on Vehicle Travel Time—Many commenters expressed concern that 7 of the 8 proposed measures were based on vehicle travel time data.

The Rule Needs to Account for All People—The largest volume of comments received expressed concern that the proposed measures did not appear to reflect the travel experience of all people using the system and, in particular, those that use public transportation, walk, or bike.

The Rule Needs to Account for Multimodal Travel—Many commenters perceived that the proposed measures would encourage highway expansion and would not recognize strategies that provide for greater transportation choices.

The Proposed Rule Was Overly Complex—Many State DOTs and MPOs raised concern with the complexity of the design of the measure calculations and asked for the method to be simplified.

The Coordination Requirements in the NPRM Would be Difficult to Implement—Many State DOTs and MPOs expressed concern with the level of coordination required to agree on data sources, travel time expectations, and targets for urbanized areas.

The Rule Should or Should Not Include a Greenhouse Gas Measure—Comments were received both supporting and objecting to the inclusion of a GHG emissions measure in the final rule. Supporting comments came from thousands of individual citizens, several State DOTs, and hundreds of other organizations, including local governments, non-profits, and businesses. Comments against a GHG measure came from several State DOTs and 27 industry associations.

The NPRM's Proposed Speed Thresholds Were Problematic—Commenters expressed concerns with the use of an absolute speed threshold to determine congested conditions and the use of a single threshold to define reliable conditions.

2. Summary of Major Changes Made in Response to These Comments

The FHWA made a number of changes in the final rule in response to the comments received. These changes include the following:

The FHWA revised the suite of measures to simplify the rule and reduce the burden of compliance. The final rule contains 7 measures. Four of these are derived from vehicle travel

times, compared to 7 in the NPRM, 3 of which reflect all people traveling on the system. More specifically, the final rule does not include one of the proposed measures that focused on freight congestion and merges three additional proposed measures (two under NHPP System Performance and one under CMAQ Traffic Congestion) into one new measure, focused on excessive delay experienced during peak hours that will be under CMAQ Traffic Congestion. In addition, the final rule includes two new measures:

- **Under NHPP System Performance**—The rule includes a new GHG measure to assess system performance, specifically the percent change in CO₂ emissions from 2017, generated by on-road mobile sources on the NHS. State DOTs will be required to estimate CO₂ emissions based on annual fuel sales, EIA published emission conversion factors, and the proportion of statewide VMT that occurs on the NHS. MPOs will be provided options as to how they calculate CO₂ emissions. All State DOTs, and MPOs that have NHS mileage in their metropolitan planning area, will be required to establish targets and report on progress. State DOTs will report annual CO₂ emissions every 2 years to FHWA in their Biennial Performance Report. The FHWA will assess every 2 years if the State DOT has made significant progress towards the achievement of their target.

- **Under CMAQ Traffic Congestion**—The rule includes a new measure to assess modal share percentage, specifically Percent of Non-SOV, Travel, which includes travel avoided by telecommuting. A minimum option for doing so will be use of the American Community Survey “Journey to Work” data. States and MPOs will be provided the opportunity to use localized surveys or measurements to report on this measure and will be encouraged to report any data not available in national sources today to FHWA (e.g., bike counts).

The final rule simplifies the process. The FHWA simplifies the required data processing and calculation of the metrics. In general these steps include:

- Use of 15 minute travel time intervals instead of 5 minute intervals;
- Consistent time periods for all travel time-derived measures;
- Recognition of commercial data sets that could be pre-approved by FHWA;
- Removal of the requirement to “fill” missing data with travel times at posted speed limits; and
- Use of all vehicle travel times, regardless of speed, to replace missing truck travel times.

- In addition, FHWA is committed to working with State DOTs and MPOs to establish a pooled fund effort to acquire services and tools that will help with the processing and analysis of data.

The final rule modifies measures to address comments regarding the overreliance on vehicle travel times and the need to include multimodal travel. The final rule includes three measures that reflect the number of people traveling on the system, including two measures that have been modified so they are based on person-travel instead of vehicle travel, and a new multi-modal percent of non-SOV travel measure mentioned above. Specifically, the final rule changes the weighting of the Travel Time Reliability measures from system miles to person-miles traveled using overall occupancy factors from national surveys. It also changes the expression of the PHED measure to account for all travelers using the NHS based on volumes and occupancy factors for cars, buses, and trucks. The FHWA will provide occupancy factors based on national surveys and NTD data. State DOTs and MPOs may use more accurate local data if such data are available. The final rule creates the new Percent of non-SOV measure for CMAQ traffic congestion.

Furthermore, FHWA will revisit this issue and consider approaches to more effectively consider multimodal performance in the measures after the completion of ongoing research regarding multimodal system performance measures in fall, 2018.

The final rule addresses concerns with the use of absolute thresholds. The rule changes the proposed excessive delay threshold from 15/35 mph to 20 mph or 60 percent of the posted speed limit, whichever is greater. The rule encourages State DOTs to report the full extent of posted speed limits to the HPMS and requires that these be reported for applicable areas under the CMAQ Traffic Congestion measures. In addition, the rule changes the form of the Freight Reliability measure from one based on the percent of the system providing for reliable travel to an overall average truck reliability index for the Interstate. This change removes the 1.50 threshold in the definition of “reliable travel” for trucks and recognizes incremental improvements that could be made to improve reliability.

The final rule addresses comments regarding applicability of the rule. Specifically, the rule revises the applicability of the CMAQ Traffic Congestion measures to begin with urbanized areas (in nonattainment or maintenance) with populations over 1 million in the first performance period

(4 years begin in 2018) and then expands the applicability in the second reporting period (beginning in 2022) to urbanized areas (in nonattainment or maintenance) with a population over 200,000. Additionally, the final rule moves the date of measure applicability determination up 1 year earlier. The NPRM proposed that FHWA would determine measure applicability based on the most recent available data on October 1 of the first year in the performance period. The final rule changes this to be October 1 of the year before the beginning of a performance period. Finally, the final rule changes the use of the most recent decennial census population to determine measure applicability and to normalize the PHED measure to the most recent annual population estimate published by the U.S. Census.

The final rule relaxes some CMAQ Emission Requirements. The rule revises the definition of “Maintenance Area” to exclude any areas that have completed their 20 year maintenance plan. It also removes the requirement to develop a “metric” (by rolling the metric step into the measure calculation) to simplify the process. In addition, under the final rule, States and MPOs can request their areas to be excluded from the CMAQ performance requirements at the midpoint of the performance period if they reach attainment status (or achieve their 20 year maintenance plan).

B. Subpart A—General Information

1. Implementation Date Alignment and Coordination

The Georgia DOT commented that implementation dates for NPRMs (Asset Management, Pavement and Bridge Performance Measures, etc.) related to the new Statewide and Metro Planning Rule should be aligned to ensure accuracy and consistency. The Florida Metropolitan Planning Organization Advisory Council recommended aligning the various reporting due dates. While each rulemaking may not be finalized at the same time, the commenter requested that FHWA set a future point in time when all reporting of measures will align. The Atlanta Regional Commission (ARC) also recommended aligning the schedule for safety, pavement, bridge, travel time reliability, peak hour travel time, freight movement, traffic congestion, and on-road mobile source emissions target setting and reporting into one consolidated rotation. The New York State Association of Metropolitan Planning Organizations (NYSAMPO), Georgia Association of Metropolitan Planning Organizations, and American

Association of State Highway and Transportation Officials (AASHTO) urged FHWA to use a single effective date for all three performance management rules.

Although FHWA anticipated establishing one common effective date for the three performance management rules, the length of the rulemaking process made that approach impractical. Each rule has its own effective date. This approach allows FHWA, State DOTs, and MPOs to begin implementing some of the performance management requirements before all the rules are issued. In this final rule, FHWA aligned the performance periods (described in § 490.105(e)(4)(i)) and State Biennial Performance Report due dates (described in § 490.107) with the pavement and bridge condition measures for the second performance management rule in effort to consolidate reporting requirements. Throughout the process for all related performance management rulemakings (e.g., National Highway System Asset Management Plan,⁶ National Performance Management Measures for Pavement and Bridge Condition rule), FHWA has worked to coordinate the implementation dates for all of the rules for consistency and time alignment.

2. Reporting and Implementation Dates

The Michigan DOT, Macatawa Area Coordinating Council, and Ozarks Transportation Organization recommended designating the first performance period as a pilot period for the system performance measures. The National Association of Regional Councils (NARC) recommended postponing target establishment requirements to the second performance period. The Orange County Transportation Authority, Oregon Metro Council and the Joint Policy Advisory Committee on Transportation, Texas DOT, and TRANSCOM urged that sufficient time needs to be provided in order to effectively and appropriately develop and deploy target setting and implementation processes. The New York City DOT recommended that FHWA should coordinate with MPOs and State DOTs to set a reasonable and achievable implementation timeline. The COMPASS requested postponing target setting until transportation agencies have had a chance to familiarize themselves with the

NPMRDS data and to develop current and forecasted reliability and speed measures. The AASHTO and Iowa, Maryland, and New Jersey DOTs recommended that FHWA consider a phased approach which includes a 2-year testing period following the effective date of the final rule to allow State DOTs and MPOs to develop “non-binding targets” in order to more fully understand the use of the data and the implications of those targets. The San Francisco County Transportation Authority recommended that FHWA should coordinate with MPOs and State DOTs to set a reasonable and achievable implementation timeline. The DOTs of Idaho, Montana, South Dakota, North Dakota, and Wyoming and AASHTO suggested including “waiver provisions of part 490, in whole or part, with or without time limits or other conditions, and/or extend deadlines, for good cause shown” because they said that the new 23 CFR part 490 is a complex and multifaceted rule so that there will be unanticipated or unusually difficult circumstances in its implementation. The New York State Association of MPOs noted that a separate NPRM on MPO Coordination and Planning Area Reform was issued jointly by FHWA and FTA on June 27 and said that the proposed rule addresses “MPO geography.” The New York State Association of MPOs recommended that consideration of the implementation of this rule be suspended until the MPO Coordination and Planning Area Reform rule becomes final.

The FHWA appreciates the comments received regarding the implementation dates and reporting dates for this rule. However, MAP-21 establishes the target establishment dates and reporting dates for this rule. State DOT target establishment “not later than 1 year of the effective date of this rule” in § 490.105(e)(1) is based on a statutory requirement under 23 U.S.C. 150(d). The date for reporting progress toward targets of October 1, 2016, is also based on a statutory requirement under 23 U.S.C. 150(e), which requires State reporting “not later than 4 years after enactment of MAP-21 and biennially thereafter.” As indicated in the NPRM, FHWA believes the phase-in approach will allow sufficient time for State DOTs and MPOs to become more proficient in managing performance of non-Interstate roadways and congestion on the NHS in applicable urbanized areas as the coverage of the data becomes more complete in the NPMRDS. The FHWA retains in the final rule the phase-in requirement language in § 490.105(e)(7), (e)(8)(vi), and (f)(5)(vi) for the Non-

Interstate NHS Travel Time Reliability measure in § 490.507(a)(2) and the PHED measure in § 490.707(a), respectively. This phase-in will only require State DOTs to establish 4-year targets for the first performance period for this rule (reported in the first State Biennial Performance Report) for non-Interstate NHS Travel Time Reliability measure and the PHED measure. Under this final rule, at the midpoint of the first performance period, State DOTs will have the option to adjust the 4-year targets they established at the beginning of the performance period in their Mid-Performance Period Progress Report (due in October 2020). This option will allow State DOTs to consider more complete data in their decisions on the 4-year targets for non-Interstate NHS Travel Time Reliability and the PHED measures in applicable urbanized areas.

The Chicago Metropolitan Agency for Planning commented that the effective date of this regulation should be set 1 year after FHWA provides an NPMRDS data set with sample sizes for each epoch-TMC record. The commenter said that this timeline would allow time for agencies to determine which records have low sample sizes and collect probe data.

The NPMRDS has been available since July 2013, and many State DOTs and MPOs have been using the NPMRDS for over 3 years. The final rule and schedule for baseline reports and target establishment clarify how much time there is to prepare the data. In general, State DOTs and MPOs will have approximately 18 months to process data before the first set of metric data is required to be submitted to FHWA. The FHWA has simplified several of the measures to reduce the calculation burden, thereby reducing the amount of time necessary for State DOTs or MPOs to prepare the data.

The FHWA also acknowledges the comment regarding deferring implementation of this final rule until completion of the MPO Coordination and Planning Area Reform rulemaking. The FHWA plans to issue guidance on dealing with metropolitan planning area change during a performance period. The FHWA believes that the implementation timeline provided in this final rule provides sufficient lead time to accommodate any requirements that may arise out of a final MPO rule. So, the FHWA declines to defer the implementation of this rule.

⁶ Final rule on “Asset Management Plans and Periodic Evaluations of Facilities Repeatedly Requiring Repair and Reconstruction Due to Emergency Events” (October 2016)—**Federal Register** Vol. 81, No. 205 RIN 2125-AF57, Docket No. FHWA-2013-0052: <https://www.gpo.gov/fdsys/pkg/FR-2016-10-24/pdf/2016-25117.pdf>.

3. Accessibility and Connectivity

The FHWA received many comments⁷ urging FHWA to establish an accessibility performance measure. The California Association of Councils of Government (CALCOG) said that Federal databases should be made available to States and MPOs to support the monitoring of accessibility metrics. The Southern California Association of Governments (SCAG) said it currently measures accessibility by taking afternoon or PM peak period travel demand model results for the base and forecast years and identifying the percentage of commute or home-based work trips that are completed within 45 minutes. The Delaware Valley Regional Planning Commission (DVRPC) recommended “shorter multimodal journey-to-work travel time than average” and “number of jobs accessible within a given time budget” as accessibility measure.

The FHWA recognizes that accessibility and connectivity are important aspects of successful transportation systems that serve all users. In addition to the comments described above, stakeholder comments on these issues during outreach before publication of the NPRM expressed a variety of views, including that the establishment of an accessibility measure might encourage greater consideration of non-auto travel modes like transit, carpooling, walking, and biking. The FHWA agrees that the time-based measures proposed in the NPRM, such as the traffic congestion excessive delay measure, may not capture modal options, modal usage, or better accessibility. As described above, the final rule establishes a modal share measure that will do much to address

these concerns. While the final rule does not include a measure dedicated to directly assessing transportation connectivity or accessibility, the rule reflects a necessary balancing of performance management needs across a broad spectrum and implementation burdens on the State DOTs and MPOs.

The FHWA is working on several fronts to address accessibility and connectivity issues outside of this rulemaking. The FHWA, in cooperation with FTA, is actively working with transportation operating agencies and planning organizations on efforts to understand and advance best practices in assessing and managing transportation network connectivity to improve public accessibility to essential services. Through the Department’s Ladders of Opportunity initiatives, efforts are currently underway to evaluate how measures can be used to assess accessibility/connectivity.⁸ These initiatives will test different approaches to measure performance in this area that will help DOT better understand if and how accessibility and connectivity performance can be measured effectively at a local, State, and national level. The FHWA will use the results of these efforts to determine if a measure to assess accessibility/connectivity can be integrated into the Federal-aid Highway Program’s performance management requirements in the future.

4. Definition of Mainline Highway

Illinois DOT supports the definition of mainline highways to exclude ramps, shoulders, turn lanes, etc., but expressed concern that the NPRMDS does not exclude these parts of the transportation system. The commenter said that this will lead to extensive manual work to identify and remove these parts of the transportation system from the data it would have to use to comply with the proposed rule.

Texas DOT commented that “mainline highway” includes the primary traveled portion of the roadway and excludes ramps, climbing lanes, shoulders and non-normally traveled pavement surfaces. The commenter said the definition would seem to include managed lanes or high occupancy toll lanes. According to Texas DOT, traffic on these lanes typically travels at a higher rate of speed, which may influence the travel time reliability and percent of the Interstate System mileage that is uncongested. Texas DOT inquired whether FHWA considered these lanes to be part of a “mainline highway.” Florida DOT suggested that TMC should have categories for general

purpose lane, separated managed lane, separated collector/distributor, and ramp.

The Washington State and New York State DOTs, NARC, and Portland Metro Region MPO commented that managed lanes may be omitted in system performance calculations. They stated that the proposed rule would likely mask benefits from HOV and HOT lanes, toll roads, transit, and other operational enhancements and could discourage investment in these best practices. The Washington State DOT and NARC requested that FHWA either seek a way to differentiate the data with the data provider or account for HOV, HOT, toll roads, and other managed lanes. The AASHTO commented that FHWA should allow State DOTs the flexibility to better address the significant role that managed lanes play in the operation of the transportation system, as many regions in the United States have implemented some aspect of management lanes. The AASHTO recommended that FHWA develop an approach in the final rule that allows, but does not require, State DOTs and MPOs to specifically address managed lanes on their roadway network either through an improved NPRMDS that distinguishes between general purpose and management lanes or through supplementary analysis that takes into account the benefits of the managed lanes. The Los Angeles County Metropolitan Transportation Authority and Southwest Energy Efficiency Project commented that the proposed measure for congestion focuses exclusively on vehicle speed, ignoring the significant role that public transit, high occupancy/managed lanes, and active transportation have in reducing congestion and improving overall performance of the regional transportation system.

The FHWA agrees that ramps should not be included in measure calculations or in the NPRMDS dataset as the travel time derived measures are only applicable to mainline roadways. The next procurement of the NPRMDS will have a requirement to report mainline NHS segments only. If any ramp segments appear in the NPRMDS, State DOTs and MPOs should notify FHWA so these ramp segments can be removed in future NPRMDS deliverables.

The FHWA actively promotes managed lanes as a strategy for managing operations, which can include reducing congestion and increasing person throughput. However, at this time, it is difficult to delineate these lanes in both the segment and probe data. Lane-specific speed data are not available through the NPRMDS unless

⁷ American Association On Health and Disability and the Lakeshore Foundation, American Council of Exercise, American Public Transportation Association, BikeWalkLee, California Association of Councils of Government, Chicago Metropolitan Agency for Planning (CMAP), City of San Antonio, Delaware Valley Regional Planning Commission, Los Angeles County Metropolitan Transportation Authority, Mid-Ohio Planning Commission, Mountainland Association of Governments, Utah Department of Transportation, Utah Transit Authority, Wasatch Front Regional Council, Nashville Area Metropolitan Planning Organization, NARC, National Coalition for Promoting Physical Activity, National League of Cities, National Recreation and Park Association, New York Bicycling Coalition, North Front Range Metropolitan Planning Organization, Oregon Metro Council and the Joint Policy Advisory Committee on Transportation, Parks & Trails New York, Regional Transportation Alliance, Southern California Association of Governments, Southwest Energy Efficiency Project (SWEET), Transportation for America (T4A), Trust for America’s Health, Utah Transit Authority, as well as 1,114 citizen letter campaigns sponsored by National Complete Streets Coalition, 150 citizen letter campaigns sponsored by T4A, and 11 citizen letters.

⁸ <https://www.transportation.gov/opportunity>.

the managed lane is listed as a separate NHS facility (*i.e.*, different TMC code). In addition, not all probe data are able to accurately differentiate traffic speed by lane on a roadway. The FHWA does not believe it is possible, at this time, to uniformly separate managed lanes given the available data. If State DOTs have appropriate segment-specific data for managed lanes, State DOTs may certainly track these and include this information in any reports. State DOTs or MPOs may use alternative data sources that include separate segments for managed and conventional lanes provided these data meet the requirements for equivalent data in section 490.103. State DOTs and MPOs are welcome to provide information on managed lanes in performance reports.

5. Data Processing and Conflation of Datasets

Alaska, Arkansas, California, Ohio, Pennsylvania, Utah, Vermont, and Washington DOTs, AMPO, Georgia Association of MPOs, and many others asked FHWA to process the NPMRDS and develop a tool to calculate metrics. Many commenters made the same argument that the burden on States and MPOs is too great if they are each to process the NPMRDS themselves, and that this would represent a greatly inefficient duplication of effort. The AMPO and others agreed that processing the database nationally also would help ensure consistency across the country and thus aid in comparisons nationally. These commenters said that this processing should include all imputation needed to make the data set ready for calculations. Several commenters suggested that FHWA develop a Web-based tool for State DOTs and MPOs to process data and calculate the required metrics. Caltrans further suggested that Federal funding be made available for training. However, the New York Metropolitan Transportation Council suggested that States and MPOs should have the option, if they so choose, to do their own calculations of the required performance metrics and measures.

Others, such as Virginia DOT and TRANSCOM, more generally requested technical assistance and support for States and MPOs in undertaking metric and measure calculation. Michigan DOT suggested a case study of what the process and outputs would look like. The Mayors Innovation Project would like to see commercially available tools to relate speed, modal network availability, and location to help assess not only speed but accessibility.

Many comments noted the particular burden of handling the NPMRDS,

processing and developing the metrics even if they did not call on FHWA to perform these tasks. Commenters expressed concern about not only the time and resources it would take but also if State DOT and MPO staff would even have the skills to perform these tasks at all. Many commenters were concerned that the NPRM required data from both Traffic Message Channel (TMC) networks (*e.g.*, NPMRDS) and linear referencing systems (*e.g.*, HPMS) and that these two datasets are not conflated. Commenters requested that either FHWA provide conflated datasets or a tool for States to use. The FHWA recognizes and appreciates the effort required to download, store, process, and analyze the data in the NPMRDS in order to calculate the metrics required in the rule (and this is taken into account in the RIA). Some organizations have expressed that they are ready and capable of providing technical services and online applications to process and analyze data. The FHWA believes that the most effective way to address the concerns regarding the challenges with conflating data sets (linking travel time data with other roadway information such as traffic volumes) is by having organizations that have the skills and resources to handle and process large data sets provide these services and tools to State DOTs, MPOs, and FHWA. The FHWA is committed to working with State DOTs and MPOs to set up a pooled fund approach to data processing, analysis, metric/measure calculation and reporting, and potentially additional analysis tools. The economies of scale of all interested parties working together should help alleviate burdens. In addition, the Advanced Transportation and Congestion Management Technologies program offers grants that could be used to support the collective need to provide technologies that could be used by State DOTs and MPOs to better manage system performance. The FHWA is using authorized funds under the new Performance Management Data Support Program (FAST Act Sec. 6028) to fund the acquisition of travel time data and to develop enhancements to the HPMS to support the data requirements of this rule.

The FHWA anticipates that the next NPMRDS contract will include HPMS referencing for each TMC segment. This will simplify the process to conflate the travel time data to roadway information contained within the HPMS. The FHWA is also committed to help State DOTs and MPOs understand how they can most effectively process and analyze the travel time data sets. Technical support

is already included in the NPMRDS contract where quarterly webinars are provided and technical assistance is offered on request. The FHWA intends to build on these services to support State DOT and MPO needs for assistance.

6. Population Estimates

The Portland Metropolitan Region MPO recommended regional population be taken from Census-based annual estimates already obtained by MPOs for regional planning purposes from their own staff, reputable academic institutions, or qualified consultancies. The North Jersey Transportation Planning Authority (NJTPA) recommended using the most recent population estimate for the urbanized area. This commenter added that a constant population, as proposed, means that the only changes being measured and reported are the changes in delay; therefore, increases in delay associated with an increased population would not factor into the measure. The T4A also said that America's urban areas are witnessing large population shifts that have the opportunity to be omitted from two 4-year reporting cycles because of the reliance on decennial U.S. Census population estimates. This commenter requested discussion in the final rule for how States and MPOs could use population estimates from 5-year ACS estimates for each year reporting cycle.

The Oregon and Washington State DOTs stated that the proposed language, to keep the population numbers used in the delay measure constant for the duration of the performance period, would give an inaccurate picture of congestion in fast-growing cities as more people use the roadways. The Washington State DOT requested that the delay measure be derived by dividing the total annual excessive delay by an estimated commuter population.

The FHWA agrees with the comments that suggested the use of annual population estimates to determine measure applicability and to calculate the PHED measure. The FHWA believes that the use of annual estimates will provide for a more accurate estimation of population at the time when applicability determinations are made and when annual measures are calculated.

Therefore, the final rule uses the most recent annual population estimate published by the U.S. Census Bureau (in lieu of Decennial Census population estimates) to compute the PHED measure and to determine which State DOTs and MPOs will be implementing

CMAQ traffic congestion measures (both PHED and non-SOV Travel). Please see discussion section for §§ 490.709(g) and 490.105(e)(8)(iii) and (f)(5)(iii) for more details. To maintain consistency throughout all CMAQ measures, the final rule also uses the most recent annual population estimate published by the U.S. Census Bureau to determine which MPOs are required to develop and submit MPO CMAQ Performance Plan (Section 490.107(c)(3)).

7. Replacement of Missing Travel Time Data

Several commenters expressed concern about replacing travel time data missing from the NPMRDS with imputed data. Chicago Metropolitan Agency for Planning stated that imputation should be avoided as it may lead to under- or over-reporting, depending on the level of congestion present, and suggested that if imputation is used, FHWA should apply consistent rules for the replacement of missing values for all measures. Ozarks Transportation Organization, Oregon Metro Council and the Joint Policy Advisory Committee on Transportation, Association of Metropolitan Planning Organizations, and Puget Sound Regional Council argued that imputation, while perhaps unavoidable, would increase inaccuracy in data sets.

Some commenters, including North Jersey Transportation Planning Authority and Florida DOT, expressed general support for replacing missing travel time data with imputed data. Nebraska Department of Roads argued that the proposed restriction on using imputed data is inconsistent with the current use of estimates in the NPMRDS and further recommended that FHWA permit the use of estimates in alternative data sets. The AASHTO suggested that imputed data be smoothed and include information on whether the data were imputed at multiple confidence intervals. The commenter also recommended that in the future FHWA should require the provider(s) of NPMRDS data to follow recognized, industry-accepted methods for imputing incomplete or missing data. The New York State Association of Metropolitan Planning Organizations argued that the use of imputed data should be conditional on vendors providing details about the data (e.g., the methodology used to develop them).

Many commenters expressed support for imputation based on sources other than speed limit data, arguing that the alternatives have tested well in the field and are more accurate, efficient, and sophisticated than speed limit data are, and recommended that FHWA allow

States the flexibility to use such data from providers like HERE, INRIX, and TomTom. These commenters included DVRPC, New York State Association of Metropolitan Planning Organizations, AASHTO, and the State DOTs of Texas, Washington State, Oregon, Connecticut, New York, and Pennsylvania. The AMPO suggested that where observed data are unavailable, travel time interpolated between adjoining segments should be used instead of speed limit data. The Kentucky Transportation Cabinet recommended that, depending on the time of day for which data is required, imputation could involve either treating missing data as a maximum travel time or inserting historical data into the data set.

The final rule provides State DOTs the flexibility to select and use an alternative data set to the NPMRDS provided the data are considered “equivalent” as defined in section 490.103(e). The FHWA has established these requirements to ensure, through FHWA approvals, that data from different data sources are nationally comparable. The FHWA recognizes the concern with the degree of missing data and outliers in the NPMRDS as it existed when the NPRM was published. The FHWA supports approaches to filling in missing data provided they are based on observed travel during the same timeframe and roadway location, which is typically referred to as path processing. The original contract for the NPMRDS only allowed point-based probes to be included in the dataset (*i.e.*, that determine travel time based on the detection of a vehicle at one point in location). This method often recorded vehicles waiting at signalized intersections or missed them entirely during the detection period (5 minutes). The FHWA is currently updating the NPMRDS to allow for the determination of individual travel times during specified time intervals based on tracking the movement of single vehicles passing through a series of segments. This approach will maintain FHWA’s desire to use observed travel times without the challenges associated with single point detection. The FHWA is confident that travel time providers will be able to provide data sets that follow this approach.

To maintain consistency at a national level and to maintain an acceptable level of bias from the actual travel times occurring on the roadway throughout the year, FHWA discourages the use of methods to predict travel times based on historical trends or reference speeds. Consequently, to address concerns regarding the prohibition of the use of

imputed travel times, FHWA has revised the final rule in section 490.103(e)(5)(iii) to allow “observed” travel times that may be derived from travel times reported over a longer time period of measurement (path processing or equivalent). The final rule will not allow missing data to be filled with data that are imputed from historical data or predicted based on statistical analysis approaches.

8. Segment Lengths

The AASHTO and Illinois DOT expressed concern that the NPMRDS TMC segments are not consistent lengths across months and years. To address this issue, AASHTO recommended that FHWA require the NPMRDS provider to maintain segment definitions existing at the start of the year throughout the year. Because under this scenario, new roads and interchanges would not show up in the NPMRDS until the year following their opening, AASHTO commented that this approach would allow some time for State DOTs to get familiar with how new facilities are being used by the traveling public before they need to set targets and report on their performance. The Illinois DOT commented that the changing TMC segments would result in having to maintain conflation across each month’s data in order to be able to analyze the measures and complete the calculations. The commenter asserted that this would impact the measures for a segment over time as it would not be comparing similar segments across the 4-year reporting timeframe.

The AASHTO, Illinois, Minnesota, and Georgia State DOTs, Florida Metropolitan Planning Organization Advisory Council, Hampton Roads Transportation Planning Organization, Ozarks Transportation Organization, and Denver Regional Council of Governments recommended that FHWA allow State DOTs and MPOs flexibility to establish reporting segments that best reflect the needs of an individual State, which may be longer than the proposed limit of 1/2 mile for urban areas and 10 miles for non-urban areas. For example, AASHTO and Florida Metropolitan Planning Organization Advisory Council said that the segments could be based on logical termini, such as intersecting NHS facilities or the start or end of an urbanized area. The AASHTO and Connecticut DOT asserted that the proposed maximum length of reporting segments (1/2 mile in urbanized areas, 10 miles in non-urbanized areas) for a reliability measure are not consistent with prevailing practices in calculating travel time reliability measures (e.g., SHRP 2 Reliability Program).

Specifically, New York State Association of Metropolitan Planning Organizations proposed that FHWA permit urban travel time segments up to 5 miles in length. Requesting to see FHWA's research behind the proposed reporting segment length caps, Oregon and Washington State DOTs recommended that FHWA revise proposed § 490.103(f) so as not to be misinterpreted as allowing longer groups of TMCs (one "reporting segment") if one of the TMCs within the group is longer than the threshold.

The Great Lakes Regional Transportation Operations Coalition and University of Wisconsin-Madison Traffic Operations and Safety Laboratory recommended that FHWA remove the option to aggregate segments if using the NPMRDS, arguing that it is unnecessary, would involve extra work, and could invite a sort of gerrymandering where poorly performing TMCs can be bundled with better TMCs so measures meet targets. The Minnesota and New Jersey State DOTs, NJTPA, Metropolitan Council, and Wichita Area Metropolitan Planning Organization requested a clarification on the treatment of segments that cross MPO and/or urbanized area boundaries. The NJTPA said that the proposed rule is unclear as to how reporting segments that cross MPO and/or urbanized area boundaries are to be handled. Moreover, it said that none of the measures that MPOs need to report at the MPO level mention how to handle reporting segments that cross an "MPO boundary."

The NJTPA also urged FHWA to revise the rule to allow one set of reporting segments for the freight measures and another set of reporting segments for the remaining measures, reasoning that the standard for locating TMC segment endpoints is not standardized across commercial vendors. According to this commenter, the proposed rule would effectively require that, if a State opts to use an equivalent data set, it would have to use the TMC definitions used by HERE, the vendor that provides the NPMRDS. In order to clarify the default reporting segment in the event that States and MPOs do not agree, AASHTO, Illinois DOT, and Connecticut DOT recommended that FHWA revise the definition of "reporting segment" to say that a reporting segment is the segment set forth in the NPMRDS data set provided by FHWA (or an alternative data set used by the State) unless the State and any applicable MPO determine otherwise. New York State Association of Metropolitan Planning Organizations also recommended that

the definition of "reporting segment" address the process of which agency defines reporting segments within the urbanized area or MPA, proposing that FHWA amend the proposed definition to state "the State and MPOs cooperatively define . . ." Oregon and Washington State DOTs requested clarification regarding what type of documentation will be adequate for demonstrating coordination between State DOTs and MPOs for establishing reporting segments.

The FHWA recognizes that changes in segment length can present challenges in metric calculation. Segment length changes in the NPMRDS can occur sometimes due to the provider splitting long segments or new roads/improvements necessitating changes in the segmentation. Although it will be difficult to lock in segment lengths for a full year, FHWA will work with the NPMRDS provider to limit segment changes and document any changes made. Also, the proposed Pooled Fund approach to processing/analysis could help alleviate this issue.

In regard to aggregation, although there remains an option to join travel time segments into Reporting Segments of longer lengths, State DOTs are not required to take this action. The FHWA has retained the option to allow State DOTs to relate Travel Time Segments to their own roadway segmentation and to ensure travel time data are used at a sufficiently detailed level to provide useful metric calculations. In response to several comments asking if segments in urban areas could be longer than 0.5 miles, in this final rule, FHWA has changed the maximum length for reporting segments to one mile in urban areas, unless an individual Travel Time Segment is longer.

The FHWA intends to develop guidance to assist State DOTs and MPOs in the processing of segments to calculate metrics. The final rule does not specify how segments that cross boundaries should contribute to the metric. It is anticipated that data processing guidance will recommend that segments should contribute to the metric only if the entire length of the segment is contained within the applicable area.

9. NHS Coverage in the NPMRDS Data

The Great Lakes Regional Transportation Operations Coalition and University of Wisconsin-Madison Traffic and Safety Laboratory commented that NHS coverage in the NPMRDS changes with each static file change, which would alter the calculations. The commenter recommended that calculations be based

on only those TMCs that exist in all static file versions within a year.

The Illinois DOT commented that since NPMRDS TMC segments are not consistent lengths across months and years, it would be difficult to perform proper analysis because States would not be comparing similar segments across the 4-year reporting time frame. Ozarks Transportation Organization provided a similar comment and noted that the NPMRDS would need to be adjusted regularly in order to be used for performance measures and reporting.

The FHWA will work with the NPMRDS contractor to make sure the NHS updates are reflected in the NPMRDS travel time data as soon as is possible. There are inherent delays in providing data on a system that can change, and FHWA has addressed the issues in the rule by making certain requirements consistent throughout a reporting period. Comments received in the second performance measure rulemaking (pavement and bridge conditions) suggested that the impact of measure outcomes due to variations of NHS limits from year to year are not sufficient enough to warrant locking in one definitive NHS limit for a full performance period. This final rule follows the same approach.

10. Travel Times

Several commenters expressed support for travel times of 15 minutes (or longer), being used for the travel time-based measures. The commenters asserted that this would lead to, among other benefits, fewer bins with no data, reduced data storage burden, less effort required for quality control and quality assurance, and greater utility for members of the public interested in the data. Commenters argued that the higher level of granularity available in data from 5-minute bins, which provides more precision but not necessarily greater accuracy, does not confer enough additional benefits to justify the extra burden they would impose. Other commenters stated that due to low traffic volumes there may not be any travel time recorded in many 5-minute segments.

The NARC commented that if FHWA were to follow its recommendation for processing data centrally, FHWA could then obtain the data in 5-minute (or even 1-minute) bins but provide them to States in 15-minute bins. The AASHTO expressed support for the use of 5-minute bins for national-level performance reporting but stated that data with higher temporal resolution (e.g., 1-minute bins) have benefits for other purposes such as research.

Southeast Michigan Council of Governments expressed concern that for data on freight movements, 5-minute bins may not contain enough data points to maintain the anonymity of individual trucks. The Maine DOT commented that 60-minute bins would be better suited to its needs due to the limited and seasonal nature of its congestion and reliability issues as a rural State with low population density.

The FHWA agrees with and appreciates the concerns raised by commenters on the challenges with using 5-minute temporal granularity in the calculation of travel time metrics. Using 15-minute time periods would significantly simplify data analysis in terms of the size of the data set; FHWA estimates that the data set would be reduced by approximately two-thirds. The FHWA received many comments noting the amount of missing data when using 5-minute time intervals. The FHWA conducted an analysis to compare the amount of missing data when using 5-minute time periods to 15-minute time periods and determined that, for the segments analyzed, switching to 15-minute time periods improved data completeness by 25 percent to 30 percent for non-Interstate NHS segments; the resulting NHPP reliability measures differed by no more than 5 percent for Interstate highways. In addition, individual segment level LOTTR values were nearly identical, with an average difference of less than 1 percent for all of the segments evaluated. The assessment showed the greatest difference for the PHED measure, which was likely due to the prevalence of missing data at the 5-minute interval. The FHWA recognizes that larger time intervals reduce the level of specificity and granularity, but believes that the benefits of a more complete data set will allow for more accurate measure calculations. The FHWA does encourage the use of more granular time intervals (1 to 5 minutes) to carry out segment level analysis to better identify strategies to address issues impacting roadway reliability and congestion, but this information is not required to be reported to FHWA.

11. Alternative Data Sets

The AASHTO expressed support for FHWA's intent to make the NPMRDS available to State DOTs and MPOs for use in calculating performance measures and to allow States to use an alternate data set. Several State DOTs questioned FHWA's ability to continue to provide the NPRMDS data free of charge in the future raising concerns with the burden on State DOTs to acquire this data on their own if this

were to happen. Commenters also expressed concerns with the costs associated with the development of alternate data sets that would comply with the proposed travel time data requirements.

The NJTPA asked if equivalent travel time data sets can include data from different vendors or sources or both, as long as it satisfies FHWA requirements. For example, the commenter recommended that FHWA consider a "hybrid" or "fused" data set (such as the TRANSCOM "Data Fusion Engine" travel time data set) that includes travel times from various agency sensors (e.g., BlueTOAD sensors, toll transponder readers, Sensys pucks) as well as commercial probe data. Iowa DOT asked if the requirement that data "be populated with actual measured vehicle times and shall not be populated with travel times derived from imputed methods" eliminates any specific alternative data sources (e.g., INRIX) from consideration.

Several commenters requested detailed guidance on the approval process for using equivalent data sources in place of, or in conjunction with, the NPRMDS. In particular, the commenters asked what the approval process will look like, who will have the authority to grant the approval, how quickly the approval will be granted after a formal request is made, what information will be required for approval, what happens if FHWA does not approve the data set, and how frequently requests can be made by each State. The commenters also recommended that FHWA include in the final rule a time limit for such requests, stating that approval will be granted if no action is taken once the time limit expires. Rather than requiring State DOTs to get approval for alternate data sets, the Great Lakes Regional Transportation Operations Coalition and the University of Wisconsin-Madison Traffic Operations and Safety Laboratory suggested that it would be more efficient for a central entity (e.g., CATT Lab or TTI) to house and process travel time data, produce the metrics, and provide results to State DOTs and MPOs for use in target setting and reporting.

The Delaware Valley Regional Planning Commission, on behalf of the Partners Using Archived Operations Data, recommended that FHWA streamline the process to approve alternate data sets. Hampton Roads Transportation Planning Organization and the State DOTs of Virginia and Minnesota suggested that FHWA approve specific alternate data sets (such as INRIX and TomTom) rather

than requiring each State to request approval for these sources.

The FHWA believes that the use of the NPMRDS data set by all States and MPOs will promote national consistency among all of the measures. However, FHWA is willing to review commercially available travel time data sets to pre-approve those that are determined to be "equivalent" to the NPMRDS. The FHWA is not currently aware of any commercial data set that is "equivalent," but requests that if a State DOT or MPO believes that an alternative data set is "equivalent," then that State DOT or MPO should submit a request to FHWA. The FHWA appreciates that State DOTs and MPOs will need to know if a commercially available data set will be considered equivalent to the NPMRDS before financial resources are used to acquire data. Therefore, FHWA will consider alternative data set providers, on request by a State DOT or MPO, before their decision to use the data to meet the requirements of this final rule. If FHWA reviews a request and determines that the alternative data set is not "equivalent," then the State DOT or MPO must use the NPMRDS data set. Finally, FHWA retained the proposed regulation to use a single travel time data set (NPMRDS or equivalent) for all travel time derived metrics in this final rule. The FHWA believes that, as the metrics apply to the same roadway segments with the same traffic, it is important to use the same data set to calculate the metrics.

The FHWA intends to approve requests for alternate data sets in a timely manner such that the requested data set can be used by the State DOT beginning on January 1st of the year following the request. State DOTs should contact FHWA as soon as practical when considering alternate data sets to provide for sufficient time for the State DOT to acquire the data for use. The October 1st deadline is included in the final rule as the latest date the FHWA believes an alternate data set can be approved for use by the next calendar year. For clarification, in response to questioned raised by commenters, the final rule allows for alternate data sets to be combined with the NPMRDS in whole or in part to meet the travel time data requirements of this rule.

12. Corridors

Several commenters expressed a preference for a corridor-based approach to evaluate system performance instead of a segment-based approach and system-wide performance measures. The New York State DOT requested that the final rule to focus on corridors,

particularly in urban areas where congestion is likely to occur, that are defined by States and MPOs in ways that are meaningful for State and regional planning. The Washington and Oregon DOTs use a corridor-based approach that they assert allows the State to manage systems based on important functions and characteristics that will be missed by simply having urban/non-urban measures system-wide.

As part of an internal evaluation of the performance measures, Purdue University compared segment-based results with a corridor-based approach. According to this commenter, the corridor-based results were consistent with the segment-based analysis in that Interstate routes tended to be more reliable, but the routes for which there were numerous individual segments with a number of high LOTTR or PHTTR values did not exhibit these high values in a corridor-based analysis.

Oregon Metro Council and the Joint Policy Advisory Committee on Transportation urged FHWA to develop an integrated multimodal corridor approach to measuring person throughput and congestion that includes HOV lanes, public transit, and biking and walking facilities.

The California Association of Councils of Government (CALCOG) and others commented that freight measures specifically should be focused at the corridor level.

The FHWA recognizes that many State DOTs and MPOs use “trips” as the basis for reliability determination and fully supports that approach. However, that approach requires a working knowledge of how the system operates at a corridor level. Determining the length of analysis for these trips is not something that can easily be done in a nationally-consistent way. Instead, FHWA determined that looking at segment level performance was a satisfactory way to provide a consistent approach to measure system performance and traffic congestion in this rule. While State DOTs and MPOs are only required to assess progress on full system performance in this rule, State DOTs and MPOs may use the metrics to assess corridor-specific performance and use corridor-specific information to monitor progress, analyze trends, and establish targets.

13. Weather and Construction Impacts

Several commenters expressed concern that extraordinary events such as non-recurring inclement weather, prolonged construction, large gatherings, and insufficient funding will make target setting difficult and will

impede agencies’ ability to achieve successful performance. Commenters requested FHWA take these events into account in the final rule.

The AASHTO recommended that FHWA allow State DOTs and MPOs the flexibility to exclude from calculation and targets roadway segments for periods of inclement weather conditions using a consistent approach and data (e.g., National Weather Service reports and data archives).

The Illinois DOT suggested reports should be based on the number of days and/or center-line miles of facilities that are under construction or impacted by weather in order to keep the data set whole. The NARC suggested that there should be an opportunity for MPOs and States to explain targets and results as part of the reporting protocol to address unique circumstances.

The Mid-Ohio Planning Commission suggested including all extraordinary events, as all entities will undertake construction, and this measure would remain consistent with the bridge and pavement rule, which does not change factors for areas with more inclement weather. The Great Lakes Regional Transportation Operations Coalition and the University of Wisconsin-Madison Traffic Operations and Safety Laboratory reasoned that extraordinary events are in the far “right tail” of travel time distributions and would not affect the 80th percentile travel time.

The FHWA believes that reliability measures should include travel times during weather- and construction-related events to ensure that the measure reflects the efforts by transportation agencies to maintain and improve roadway operations. The FHWA further believes that the 80th percentile travel time used in the calculation of the NHPP reliability metric will exclude a majority of the longest travel times that occur as a result of extreme congestion events. The variability in travel time resulting from construction operations and other events that impact traffic flow are expected to be included in the measure as operational improvements and management should be able to help alleviate impacts from these events. The FHWA modified the NHFP reliability measure to remove the threshold that would determine if a segment is providing for reliable travel. The FHWA believes that this change will minimize the impact that extreme weather events could have on the metric and measure outcome. The FHWA has also added a provision for all the travel time derived measures that allows removal of travel times from the metric calculations when the roadway is closed.

The FHWA has retained the proposed provisions in section 490.109(e)(5) that consider extenuating circumstances, allowing State DOTs to explain the factors they considered when establishing targets and the circumstances that may have impacted their ability to make progress in achieving those targets. The FHWA believes that these provisions will allow State DOTs to document the impact of extreme weather events on performance expectations and their ability to manage system performance.

14. Holidays

The FHWA received several comments on whether holidays should be excluded from the travel time-based measures and requested that these exclusions be consistent across all travel time-based measures.

The AMPO pointed out that there are issues with consistency in calendar coverage in the proposed rule; holidays were excluded in the PHTTR metric, but not in the LOTTR metric. The commenter expressed concern that these inconsistencies, if not clearly justified, have the potential to add confusion and increase the burden in implementing these measures. A consistent set of time periods would be easier to understand.

Puget Sound Regional Council proposed that a consistent set of weekday time periods that excludes holidays would be easiest to understand.

The AASHTO, echoed by New Jersey, Missouri, Washington DOTs and others, requested days to be grouped similarly (non-holiday weekdays, weekends, and holidays) and for any excluded holidays to be specified in the final rule. They also asked for guidance on how to manage holidays that fall on weekends and are observed on a weekday.

The FHWA agrees with commenters that the burden required to identify and exclude holidays from the metric calculations is not warranted. The FHWA compared measure results with the inclusion and exclusion of holidays in the calculation. The analysis indicates that the inclusion of holidays in the travel time-based measures did not have a statistically significant effect on the annual metric and measure calculations. For this reason, the rule now requires that holidays be included when determining the metric.

15. Annual Reporting of Travel Time Metrics

The Oregon and Washington State DOTs commented that annual reporting of LOTTR and PHTTR metrics is too burdensome.

The FHWA recognizes the burden associated with the calculation of travel time based metrics, particularly in the first years of implementation. However, FHWA believes that through the development of standard processing routines the metrics can be calculated with a reduced burden. The proposed pooled fund effort should help alleviate the burden of annual reporting while providing consistent performance monitoring data for use in all performance management activities.

16. Establishing Performance Targets

The Atlanta Regional Commission and the Florida Metropolitan Planning Advisory Council stated that they appreciate the flexibility provided to State DOTs and MPOs regarding the establishment of improving, constant, or declining targets and they asked that this implementation philosophy be carried forward to the final rule. Several commenters⁹ recommended that specific regulatory language be included in the final rule to confirm that State DOTs and MPOs are allowed to establish improving, constant, or declining targets.

The FHWA believes that State DOTs and MPOs have the discretion to establish their targets. The MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets. The FHWA believes that this rule does not impair the ability of State DOTs and MPOs to establish constant or declining targets. Thus, FHWA believes that specific language describing potential target level scenarios in the regulatory language is unnecessary.

17. Target Establishment Frequency

Several commenters¹⁰ stated that 2-year and 4-year timeframe will not reveal any meaningful progress toward targets or strategies implemented in that those timeframes. Others¹¹ expressed concerns that “over-emphasis on short-term over longer term targets may present an unintended obstacle to developing innovative, sustainable, and comprehensive solutions or to undertaking larger projects that can take many years to plan and implement.” The New York State Association of MPOs stated that the biennial reporting would give a snapshot of performance, but would also not reflect the results of

projects that have not been in place long enough for their impact to be measured. This commenter suggested that it may be useful to include in the report a list of projects implemented since the previous reports. The Pennsylvania DOT, COMPASS, and DVRPC recommended a broader time-horizon in the final rule. The AASHTO and several State DOTs¹² recommended providing State DOTs and MPOs the opportunity to voluntarily set long-term targets, not just 2- and 4-year targets, and to do so completely outside of the Federal regulatory framework. The Mid-Ohio Regional Planning Commission (MORPC), CMAP, and Portland Metropolitan Area MPO commented that targets should be established as part of each MPO’s Metropolitan Transportation Plan development or update cycle.

As stated in the NPRM, established targets (2-year and 4-year) would need to be considered as interim conditions/performance levels that lead toward the accomplishment of longer-term performance expectations in State DOT long-range statewide transportation plans and NHS asset management plans. In order to avoid confusion, FHWA used the term “longer-term performance expectations” in the NPRM to distinguish between longer-term targets and the interim anticipated condition/performance (*i.e.*, 2-year and 4-year targets) toward those longer-term performance expectations. The FHWA recognizes the importance of using a longer time horizon for planning and programming projects that considers and evaluates temporal tradeoffs between feasible improvements for more efficient and effective investment decisions. The FHWA strongly recommends that State DOTs and MPOs consider longer time horizons, which look beyond 4 years (*i.e.*, multiple performance periods), for planning and programming of projects, so identification and selection of those projects is guided by the longer term performance expectations. The purpose of the performance period is to measure and evaluate condition/performance, which should not be assumed to be a “planning, programming, project delivery, data collection, data reporting” cycle of individual improvement projects or a program of projects. Thus, the performance period and long-range planning (LRP) cycles look at different time periods and do not have to be aligned to be effective. Therefore, FHWA retains the proposed language in § 490.105(e)(4) and (5) in this final rule.

18. Target Adjustment Schedule

The Washington State and Oregon DOTs, AMPO, and Fairbanks Metro Area Transit System supported the proposed approach for allowing State DOTs to adjust an established 4-year target in the Mid Performance Period Progress Report. On the other hand, New York State Association of MPOs, State DOTs of South Dakota, Connecticut, Utah, and Alaska, and AASHTO recommended the flexibility to be able to adjust targets annually, if critical assumptions underlying performance targets have changed sufficiently to affect target values.

The FHWA believes that MAP-21 gives FHWA the discretion to establish requirements for targets. The FHWA has determined that State DOTs or MPOs may establish any target to satisfy the requirements for the performance management measures. The FHWA believes State DOTs have the authority and flexibility to establish targets for the performance measures. However, FHWA does not believe MAP-21 provides State DOTs and MPOs the authority to adjust or revise targets at any time at their discretion. The FHWA believes that 23 U.S.C. 150 provides FHWA the authority to establish requirements for targets, and that some requirements must be established so that accountability and transparency are instilled in the performance management process. As discussed in the NPRM, the FAST Act amended the number of determinations¹³ in MAP-21 from “two consecutive determinations” to each determination, that FHWA will make on a State DOT target (determined that State DOT has not made significant progress towards achieving its target) before that State DOT is required to take action.¹⁴ In response to this change, FHWA felt that an approach is necessary to provide State DOTs the same opportunity to make significant progress for 4-year targets as for the 2-year targets. The FHWA believes that 4-year target adjustment through the Mid Performance Period Progress Report will provide that opportunity because the actual time horizon (the duration between the target reporting date and the date which a target is established for) for State DOTs to consider in establishing 2-year targets and adjusting 4-year targets will be the same. For example, the duration between 2-year target reporting (via Baseline Performance Period Report) and the

⁹ AASHTO, Alaska, Arkansas, Connecticut, Florida, Idaho, Illinois, Montana, Missouri, North Dakota, South Dakota, Wyoming DOTs, and National Association of Regional Councils.

¹² Alaska, Connecticut, and Illinois.

¹³ 23 U.S.C. 119(f)(7).

¹⁴ 23 U.S.C. 119(f)(7)—Require to provide a description of the actions the State will undertake to achieve the targets in its biennial performance report.

midpoint of a performance period (*i.e.*, the date which 2-year targets are established for) will be the same as the duration between adjusted 4-year target reporting (via Mid Performance Period Progress Report) and the end of a performance period (*i.e.*, the date which 4-year targets are established for). In response to the comments suggesting annual target adjustment, the State Biennial Performance Reports has the appearance that State DOTs would consider 2-year time horizon for establishing a 2-year target or adjusting a 4-year target, as the biennial reporting frequency may suggest. However, as discussed above, the actual time horizon for establishing 2-year targets and adjusting 4-year targets that State DOTs have to consider is much shorter than 2 years. The FHWA feels that this frequency of adjustment allows a State DOT to address changes they could not have foreseen in the initial establishment of 4-year targets while still maintaining a sufficient level of control in the administrative procedure necessary to carry out these program requirements in an equitable manner. For this reason, FHWA retains the language in section 490.105(e)(6), as proposed in the NPRM.

19. Ownership & Applicability of Measures/Targets

The South Jersey Transportation Planning Organization, Coalition of Great Lakes Regional Transportation Operations, COMPASS, and AMPO stated that State DOTs and the MPOs do not have any direct control over the NHS.

The statutory language in MAP-21 and the FAST Act apply the performance management requirements (23 U.S.C. 150), NHPP (23 U.S.C. 119), and CMAQ (23 U.S.C. 149) to the NHS/ Interstate System and not to “State DOT owned or operated” Interstate System or “State DOT owned or operated NHS.” The MAP-21 does not provide unique definitions to the terms “State” or “MPO” for purposes of 23 U.S.C. 150, 119, 167, and 149, and thus these terms have the same meaning as defined elsewhere in Title 23 U.S.C. Accordingly, FHWA retains the language in section 490.105(d) which requires State DOTs and MPOs to establish targets for the entire NHS and Interstate System for the entire geographical area within the State or metropolitan planning area, regardless of ownership.

20. Fiscal or Calendar Year Based Performance Periods

The Georgia DOT commented that some reporting requirements are based

on the Federal fiscal year and others on a calendar year. The commenter said that this difference would create additional work for State DOTs and suggested one consistent reporting date, or that FHWA provide flexibility to align the Federal fiscal year or calendar year reporting dates. The Portland Metropolitan Area MPO and the Denver Regional Council of Governments commented that Federal fiscal year or calendar year reporting dates for different measures are inconsistent and confusing. On the other hand, State DOTs of Washington State, Connecticut, and Oregon, AASHTO, and Puget Sound Regional Council MPO supported the metric data requirements for CMAQ on-road mobile source emissions measures based on Federal fiscal year and all travel time related measures based on calendar years. The Puget Sound Regional Council added that utilizing the existing reporting framework for CMAQ projects simplifies the process for MPOs.

In the NPRM, FHWA stated that the CMAQ on-road mobile source emissions measure establishment would rely on the existing processes State DOTs use to manage, track, and report projects as part of the CMAQ program. For this reason, FHWA elected to base the performance period for the on-road mobile source emissions measure on the Federal fiscal year to align with Federal fiscal year based reporting of the estimated emission reductions by State DOTs for CMAQ-funded projects through the CMAQ Public Access System. The FHWA believes that this approach provides the simplest and most effective means to implement the MAP-21 performance requirements for on-road mobile source emissions. As for all other measures (including the CMAQ traffic condition measures), calendar year-based data collection and reporting requirements specified in subparts E, F, and G are aligned with Calendar Year-based performance period. For these reasons, FHWA retains the language in section 490.105(e)(4)(i) unchanged. Although the performance period for the on-road mobile source emissions measure is different from all other measures, the reporting dates for condition/performance, targets, progress, etc. required in section 490.107 for the on-road mobile source emissions measure are the same as all other measures in this rule.

21. Boundaries

The Denver Regional Council of Governments commented that the geographic area application for each measure is confusing (urbanized area vs. transportation management area vs.

metropolitan planning area) particularly in light of DOT’s NPRM on “MPO Coordination.”¹⁵ The Connecticut and Arkansas DOTs commented that a greater consistency in boundaries is needed throughout this rule. The Arkansas DOT recommended a simpler, consistent boundary source be adopted in conjunction with State DOTs and MPOs, particularly given the uncertainty surrounding the definition of Metropolitan Planning Area in the context of the Metropolitan Planning Organization Coordination NPRM. The DOTs of Connecticut, Arkansas, and Maryland and AASHTO stated that, “the urbanized area geography is not well understood and the specific use of it in calculating the congestion metric involves a significant learning curve that will take time to better understand.” The National Capital Region Planning Commission stated that the urbanized area boundary determination process of the Census Bureau is not well understood and importantly does not appear to be based on transportation and mobility considerations within the urbanized area. The commenter added that the Census urbanized area does not align with jurisdictional boundaries, which in most places is where preliminary transportation project planning and programming decisions are made. Finally, this commenter said that the basic unit used for developing urbanized areas, census blocks, differs from the basic unit used by MPOs, Transportation Analysis Zones.

The NJTPA requested a clarification on the treatment of segments that cross MPO and/or urbanized area boundaries. The commenter said that the proposed rule is unclear as to how reporting segments that cross MPO and/or urbanized area boundaries are to be handled. Moreover, the commenter said that none of the measures that MPOs need to report at the MPO level mention how to handle reporting segments that cross an MPO boundary.

The FHWA clarifies that only the CMAQ traffic congestion measures in subpart G are applied to applicable¹⁶ urbanized areas for State DOTs and MPOs. All measures in other subparts in this rule are applied to State geographic

¹⁵ NPRM on “Metropolitan Planning Organization Coordination and Planning Area Reform”, 81 FR 41473 (June 27, 2016).

¹⁶ Urbanized areas with a population over one million for the first performance period and over 200,000 for the second and all other performance periods, that are, in all or part, designated as nonattainment or maintenance areas for ozone (O₃), carbon monoxide (CO), or particulate matter (PM₁₀ and PM_{2.5}) National Ambient Air Quality Standards (NAAQS) discussed in more detail under Section V Subpart G.

boundaries for State DOTs and metropolitan planning area boundaries for MPOs. The FHWA made the exceptions for traffic congestion measures because traffic congestion is more relevant in urbanized areas. Because the State geographic boundaries and the metropolitan planning area boundaries may include both urban and rural areas (and in different proportions), FHWA believes that the varying proportions of rural area (or road network in rural areas) would impact the statewide or metropolitan planning area -wide measures differently across the States and metropolitan planning areas.

As a result, FHWA is applying the CMAQ traffic congestion measures to the areas selected based on uniform and consistent criteria, such as the U.S. Census Bureau in designating urbanized areas. The FHWA understands that urbanized areas may not be the unit of area for transportation project planning and programming decisions for some agencies. However, focusing on traffic congestion in urbanized areas will allow for the opportunity to significantly reduce traffic congestion on the NHS across the nation while reducing the burden for the State DOTs and MPOs to implement the traffic congestion measures in non-urbanized areas. The FHWA disagrees with the comments from DOTs of Connecticut, Arkansas, and Maryland and AASHTO stating that “the urbanized area geography is not well understood.” The FHWA believes that State DOTs are well aware of a need for consistency or geographic continuity in urbanized area boundaries for transportation planning purposes through FHWA issued guidance.¹⁷ The FHWA believes that State DOTs’ detailed understanding of urbanized areas in planning is exhibited through State DOT reported data to HPMS.¹⁸ For this reason, FHWA retains sections 490.105(d)(2) and 490.703 for the urbanized areas as the scope of traffic congestion measures and their performance targets.

22. Unified Targets

The AMPO commented that coordination across MPO boundaries is an important facet of the MPO planning process, but it is unclear that requiring single values and targets for entire (large) urbanized areas adds value. The commenter added that the proposed

unified target for an urbanized area adds significantly to the reporting complexity and may confuse interpretation of results. The AMPO and Kentucky DOT expressed concern that State DOTs and MPOs may be reluctant to adopt targets for areas outside of their control. The Oregon, Washington State, and Delaware DOTs expressed concerns about potential “time-intensive coordination requirements” and the complexity of multi-agency coordination associated with establishing a unified urbanized target, a concern echoed by the Connecticut DOT and the DVRPC. The Chicago Metropolitan Agency for Planning (CMAP) commented that, “it is an inappropriate enlargement of the Federal role to require the establishment of identical performance targets in separate States . . . nor is the mechanism by which the States would coordinate to establish identical targets explained in the NPRM.” The commenter added that the regulation would lead to a lowest common denominator approach to target setting. Other commenters agreed that the NPRM did not address how to resolve differences in target setting.

The Mid-America Regional Council suggested that FHWA give this particular issue additional consideration to determine how to best facilitate agreement between parties where such agreement is required and integrate this thinking into the final rule. Several commenters recommended that measure applicability be limited to “Metropolitan Planning Organization boundaries, or limit the reporting areas and targets to urbanized areas that fall within an MPO and/or a State.”

The FHWA believes that closer coordination among all entities in an urbanized area is necessary because traffic congestion within each entity’s geographic boundary urbanized area impacts the performance of the surrounding entities. A single, unified urbanized area target will foster a shared vision among State DOTs and MPOs of expectations for future condition/performance of the entire urbanized area and will ensure a jointly-owned target establishment process. More importantly, because the driving public does not concern itself with State or metropolitan planning area boundaries when it comes to traffic congestion, unified targets are crucial to communicate regarding traffic congestion for the entire urbanized area. The FHWA disagrees with CMAP’s comment that this requirement is “an inappropriate enlargement of the Federal role.” A single, unified urbanized area target aligns with 23

U.S.C. 134(h)(2)(B)(i)(II) and 23 U.S.C. 135(d)(2)(B)(i)(II), which require State DOTs and MPOs to coordinate in establishing consistent targets, to the maximum extent practicable.

Because of the reasons above, FHWA retains the language proposed in NPRM § 490.105(d)(2), (e)(8)(iii)(B), and (f)(5)(iii)(B). The FHWA recognizes that State DOTs and MPOs will need more time to coordinate in the target establishment process, so FHWA provides a phase-in of this requirement in § 490.105(e)(8)(vi) and (f)(5)(vi), in the final rule, for the PHED measure in section 490.707(a).

23. CMAQ Measure Applicability

The Florida Metropolitan Planning Advisory Council commented that those States in attainment need to remain exempt from traffic congestion measures and targets. The NJTPA commented that the traffic congestion measure applicability determination approach described in § 490.105(e)(8)(i), (e)(8)(ii), (f)(5)(i), and (f)(5)(ii) may cause problems for a State DOT or MPO with a small amount of urbanized area NHS roadways within their boundaries. The commenter recommended that FHWA consider a minimum length of urbanized area NHS roadway for the measure applicability.

The FHWA has emphasized a need for close coordination among all entities in an urbanized area because the traffic congestion within each entity’s geographic urbanized area boundary impacts the performance of the surrounding entities in that urbanized area. The absence of any one of the surrounding entities in implementing traffic congestion measures will hinder establishing an effective and meaningful performance target for that urbanized area. For this reason, FHWA retains the language, as proposed in the NPRM, on the criteria for State DOT traffic congestion measure applicability in § 490.105(e)(8)(i) and (ii).

The FHWA concluded that regardless of the NHS miles within an entity’s geographic urbanized area boundary, the traffic congestion on those miles of NHS could impact the traffic congestion in the broader area. The FHWA considered a minimum length of NHS within an entity’s geographic urbanized area boundary as a threshold in the applicability determination, but concluded that such an approach would be arbitrary. The FHWA thus retains the methodology and approach proposed in the NPRM for the traffic congestion measure applicability determination described in § 490.105(e)(8)(i), (e)(8)(ii), (f)(5)(i), and (f)(5)(ii).

¹⁷ Highway Functional Classification Concepts, Criteria and Procedures (FHWA): https://www.fhwa.dot.gov/planning/processes/statewide/related/highway_functional_classifications/section06.cfm.

¹⁸ “Urban Code” Data Item in HPMS sections data.

Commenters also requested flexibility to revise applicability if nonattainment or maintenance designations change during the 4-year performance period. The Georgia DOT recommended making the determination of which State DOT and MPOs are subject to CMAQ measures 1 year in advance of the State DOT Baseline Performance Period Report to provide some assurance and to avoid unnecessary resource expenditure based on assumptions.

The FHWA agrees with the comment from Georgia DOT that applicability determination should be made earlier. The FHWA revises in the final rule¹⁹ the timing of determining which State DOTs and MPOs are required to implement CMAQ traffic congestion measures in § 490.707(a) and (b) and CMAQ on-road mobile source emissions measure in section 490.807. The applicability determination for all CMAQ measures will be made 1 year before when the State DOT Baseline Performance Period Report.

The FHWA also agrees with the commenters on the flexibility to revise applicability if nonattainment or maintenance designations change during the 4-year performance period. As a result, FHWA has revised the rule to make section 490.809(c) inapplicable if U.S. Environmental Protection Agency changes to the designations become effective 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA. To be consistent with this change, FHWA revised § 490.105(e)(8)(iii)(F), (e)(8)(v), (f)(5)(iii)(F), and (f)(5)(v) for the traffic congestion measures, and § 490.105(e)(9)(v), (e)(9)(viii), and (f)(6)(v) for the on-road mobile source emissions measure.

24. Due Date for Initial Performance Reports

Many commenters explained that they would not have adequate time to complete a comprehensive Initial State Performance Report by the October 2016 deadline and urged FHWA to delay or change the due date.

The FHWA issued guidance²⁰ on the Initial State Performance Report on August 31, 2016, to provide State DOTs the opportunity to comply with the statutory deadline for the first performance reporting under 23 U.S.C. 150(e). In this guidance, FHWA

recognized that State DOTs would not have established targets for the measures in this rule. The FHWA simplified the reporting requirement by only requiring a description of the planned processes for target establishment and coordination with relevant MPOs and other agencies that will occur in the selection of targets. Therefore, FHWA removes the Initial State Performance Report requirement in this final rule.

25. MPO Reporting

The AASHTO and Connecticut DOT requested that individual MPOs submit their plans directly to FHWA, and the Denver Regional Council of Governments suggested that, “it may be simpler for State DOTs to compile one statewide version . . . with input from the State’s MPOs.”

The FHWA maintained that the MPO is responsible for creating the plan and submitting it to the State DOT in a timely manner. The rule does not require more than one State DOT to attach CMAQ Performance Plans for MPOs whose metropolitan planning area crosses a State boundary. The FHWA believes that this minimizes the reporting burden for both State DOTs and MPOs, since a State DOT simply needs to receive the plan from the MPO and attach it to its biennial report; the State DOT is not required to create or modify the plan. Adding a requirement for MPOs to report to FHWA would be more burdensome, as most MPOs do not currently report to FHWA; under the CMAQ program, State DOTs report on projects for MPOs. For these reasons, FHWA retained the requirement in section 490.107(c)(3) for MPOs to submit their CMAQ performance plans to FHWA through the State DOT.

26. Optional Target Reporting

The AASHTO and several State DOTs opposed to the requirement for State DOTs to report optional (additional—urbanized/non-urbanized area) targets to FHWA in FHWA-approved formats. They said that this requirement would force State DOTs to find a way to conduct additional planning without using words such as “target,” “measure,” or “performance management” to avoid FHWA’s reporting, recordkeeping, and other regulatory requirements. These commenters urged FHWA to remove the language requiring State DOTs to report boundaries, progress, etc. in section 490.105(e)(3).

The FHWA proposed that targets established pursuant to 23 U.S.C. 150(d)(2) (authorizing State DOTs to establish different performance targets

for urbanized and rural areas) be considered “optional” or voluntary targets for State DOTs. The proposal would allow State DOTs to establish a target for any combination of urbanized areas and provided that FHWA would not assess the progress achieved for any such additional or optional targets. The FHWA interprets 23 U.S.C. 150(e)(3) to require that State DOTs report the additional targets and their progress in achieving these targets in their Biennial Performance Reports. As a result, FHWA did not modify §§ 490.105(e)(3) and 490.107(b)(1)(ii)(A), (b)(2)(ii)(B), and (b)(3)(ii)(B).

27. Significant Progress Determination

The Oregon DOT suggested adding “planned transportation corridor improvements” to the list of extenuating circumstances for not achieving significant progress in section 490.109(e)(5)(i). Several commenters suggested that “insufficient funding” be added to the list. The Michigan DOT suggested adding the impact of economy on VMT because they said that transportation agencies have limited ability to influence the VMT changes due to economy on traffic congestion.

The FHWA understands that there are many external factors that could impact the condition/performance and the State DOT’s ability to make significant progress, including lack of funding. However, FHWA believes that the frequency of target establishment and State DOTs’ ability to adjust 4-year targets at the mid-point of a performance period creates a relatively short forecast window that should allow State DOTs to consider the impacts of funding shortfalls and uncertainty (*e.g.*, lack of funding for investment, cost escalation) in initial targets and any subsequent adjustments. Additionally, State DOTs must consider uncertainties 2 years in advance in the State Biennial Performance Report. As discussed in section 490.105(e)(6), the actual duration that State DOTs have to consider uncertainties is shorter than 2 years.

The FHWA does not intend to use the significant progress determination process to be punitive or to encourage State DOTs to establish easy-to-achieve targets. Establishing targets and assessing progress is intended to encourage State DOTs and MPOs to establish data-supported targets that consider anticipated resources and potential uncertainties and to provide data-supported explanations of condition/performance changes. If a State DOT does not make significant progress because of lack of funding or other reasons, FHWA expects that State

¹⁹ Section 490.105(e)(8)(iii)(D) through (F), (e)(8)(iv), (f)(5)(iii)(D) through (F) and (f)(5)(iv) for traffic congestion measures and § 490.105(e)(9)(v) and (f)(5)(v) for on-road mobile source emissions measure.

²⁰ FHWA Guidance: Initial State Performance Report: <http://www.fhwa.dot.gov/tpm/guidance/160831.cfm>.

DOT will provide data-supported explanations for not achieving significant progress. Transportation performance management is not just about making significant progress. It is about effectively communicating to Congress and the public how the “planned transportation corridor improvements,” how the absence of “sufficient funding” and other circumstances are impacting the condition/performance of the transportation network. Moreover, FHWA believes the determination process must be meaningful and bring accountability to the program as MAP-21 and FAST Act intended. For these reasons, FHWA retains the language in section 490.105(e)(5)(i), as proposed in the NPRM.

C. Subpart E—National Performance Management Measures for the NHPP System Performance

1. Establishment of Greenhouse Gas (GHG) Emissions Measure

In the preamble to the NPRM, FHWA sought public comment on whether and how to establish a CO₂ emissions performance measure in the final rule. The FHWA asked a series of questions regarding the design and implementation of a GHG emissions measure and whether one should be established. The FHWA stated that if GHG emissions were to be measured, FHWA believed the best measure would be the total annual tons of CO₂ emissions from all on-road mobile sources. Finally, FHWA cited relevant research, including the FHWA publication, *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*, published in December 2013 (available in the docket for this rulemaking).

The FHWA received thousands of comments on whether or not to establish such a measure and how a measure should be designed and implemented. Supporting comments came from 91,695 citizens, 9 State DOTs, 24 MPOs, 19 U.S. Senators, 48 Members of the U.S. House of Representatives, over 100 cities, numerous local officials, over 100 businesses, and over 100 public interest, non-profit and advocacy organizations. Some State DOTs and MPOs already use GHG emissions as a performance measure.

Comments against a GHG emissions performance measure were submitted by 10 State DOTs, 2 MPOs, 5 U.S. Senators, 31 Members of the U.S. House of Representatives, and 27 transportation and infrastructure industry associations.

Additionally, nine State DOTs and three industry associations requested that FHWA not establish any performance measures not explicitly stated in legislation.

A number of the commenters in both groups addressed whether FHWA has the legal authority to establish a GHG measure and whether such measure could be established in this rulemaking.

After careful consideration of the comments received, FHWA decided to establish a GHG emissions performance measure in this rule to measure environmental performance in accordance with 23 U.S.C. 150(c)(3). Doing so will incorporate an important environmental aspect of system performance into the set of national performance measures, be responsive to public comments, improve transparency, and support the national transportation goal of environmental sustainability in the Federal-aid Highway Program and the national performance management program established in 23 U.S.C. 150. As highlighted in FHWA’s 2013 Conditions and Performance Report²¹ and its publication, *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*,²² there are two main types of climate change risk affecting transportation infrastructure: Continued emissions of GHGs, such as CO₂, that adversely affect the atmosphere, leading to climate change effects, and threats to the transportation system posed by climate change impacts (e.g., damaged or flooded facilities).²³ In other words,

²¹ FHWA 2013 Conditions and Performance Report (PDF Version), “Advancing Environmental Sustainability” at 5–6 through 5–7. <https://www.fhwa.dot.gov/policy/2013cpr/pdfs.cfm>.

²² *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*, FHWA (December 2013) at iii–iv. https://www.fhwa.dot.gov/environment/climate_change/mitigation/publications/ghg_planning/index.cfm.

²³ Extreme weather and other impacts related to GHG emissions, such as sea level rise, can harm, disrupt, and damage transportation systems, particularly through flooding, resulting in costly disruptions. For discussions of the potential disruptive effects of climate change on the transportation system, see also *Impacts of Climate Change and Variability on Transportation Systems and Infrastructure: The Gulf Coast Phase 2, Task 3.2 Engineering Assessments of Climate Change Impacts and Adaptation Measures* (FHWA and U.S. DOT Climate Change Center) (August 2014) at 273 (available as of September 14, 2016, at http://www.fhwa.dot.gov/environment/climate_change/adaptation/ongoing_and_current_research/gulf_coast_study/phase2_task3/task_3.2/task2phase3.pdf); and *Hampton Roads Climate Impact Quantification Initiative, Baseline Assessment of the Transportation Assets and Overview of Economic Analyses Useful in Quantifying Impacts*, U.S. DOT (September 13, 2016) (available as of November 1, 2016 at http://ntl.bts.gov/lib/60000/60100/60161/Hampton_Roads_Climate_Impact_Initiative.pdf).

the transportation system both contributes to climate change and suffers from the impacts of climate change (e.g., flooding, sea level rise). Reducing GHG emissions from the U.S. transportation sector will reduce the sector’s impact on climate change, promote environmental sustainability, and help to protect the NHS from damage caused by climate change.²⁴

The GHG performance measure established in this rule is the same measure discussed in the NPRM: Total annual tons of CO₂ emissions from all on-road mobile sources. The FHWA designed the measure in a manner that uses existing data sources and minimizes burden on transportation agencies. Because FHWA is establishing the measure under 23 U.S.C. 150(c)(3), it applies to the NHS in all States and metropolitan planning areas. State DOTs will calculate the measure by multiplying motor fuel sales volumes already reported to FHWA by FHWA-supplied emissions factors of CO₂ per gallon of fuel and percentage VMT on the NHS.

A discussion of legal comments received and a synopsis of the comments and responses on questions FHWA posed in the NPRM follow.

Legal Questions

Authority To Establish a GHG Measure

A number of commenters supported FHWA’s legal authority to adopt a GHG performance measure in this rulemaking. Commenters pointed to the language in 23 U.S.C. 150(a) as evidence that performance management is not limited to the performance measures listed in 23 U.S.C. 150(c), but rather is intended to focus on achieving the national goals in 23 U.S.C. 150(b). Commenters cited the national goal of environmental sustainability in 23 U.S.C. 150(b)(6) in supporting FHWA’s legal authority. That provision states “[i]t is in the interest of the United States to focus the Federal-aid highway program on the following national goals:

* * * (6) Environmental sustainability.—To enhance the performance of the transportation system while protecting and enhancing the natural environment.” Several commenters stated a GHG performance measure is within the statutory authorization of MAP-21, including the performance measure provision for on-

²⁴ See, e.g., discussion in Section III(A) of CEQ’s *Final Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act Reviews* (August 1, 2016). Available as of September 14, 2016, at <https://www.fhwa.dot.gov/map21/guidance/guidecmaq.cfm>.

road mobile source emissions under the CMAQ program (23 U.S.C. 150(c)(5)(B)). The commenters did not view the language as limited to the three pollutants specified in the CMAQ statute (*i.e.*, ozone, PM, and CO).

Some commenters pointed out that establishing a GHG performance measure would be consistent with other MAP-21 rulemakings. In particular, six members of the Senate Committee on Environment and Public Works pointed to the consistency between a GHG performance measure and provisions in FHWA's 23 U.S.C. 119(e) asset management rulemaking relating to current and future environmental conditions, including extreme weather events and climate change.

Commenters supporting FHWA's legal authority for a GHG performance measure also cited a number of provisions in title 23 of the United States Code as authority for the GHG measure. These included 23 U.S.C. 134(a)(1), 23 U.S.C. 134(c)(1), 23 U.S.C. 134(h), 23 U.S.C. 135(d)(1), and 23 U.S.C. 101(b)(3)(G).

Some commenters encouraged FHWA to interpret "air pollution" in 23 U.S.C. 134(a)(1) in a manner consistent with the definition of "air pollution" under the Clean Air Act,²⁵ which commenters felt would clearly bring GHG within the scope of 23 U.S.C. 134(a)(1) and under FHWA's authority. Commenters pointed to the CMAQ program as evidence of congressional intent to integrate the Clean Air Act into transportation planning. One commenter cited the Supreme Court decision in *Massachusetts v. EPA*, 547 U.S. 497, 528–29 (2007), for the principle that a GHG performance measure would not impermissibly conflict with the jurisdiction of other agencies, such as EPA.

One commenter stated that the authorizing language in 23 U.S.C. 150(c)(1) mandates that FHWA promulgate rules establishing performance measures and standards and in adopting that provision, Congress granted FHWA authority to promulgate rules establishing standards for performance management that apply to programs and objectives beyond those programs listed in 23 U.S.C. 150(c)(3)–(6). According to the commenter, the 23 U.S.C. 150(c)(2)(C) language limiting subsection 150(c) performance measures to those described in that subsection does not apply to performance standards adopted pursuant to the authorizing language in subsection 150(c)(1). The commenter concluded that 23 U.S.C. 150(c)(1) and 23 U.S.C.

135(d)(2) together give FHWA authority to establish standards for performance-based decisionmaking related to the national goals and planning objectives, including a GHG-related performance standard.

A number of commenters stated FHWA has no authority to adopt a GHG performance measure because they interpreted language in 23 U.S.C. 150(c)(2)(C) as barring the adoption of any measure not expressly listed in the statute. According to those commenters, the absence of a direct mention of GHG or climate change in the statute forecloses adoption of a GHG performance measure because 23 U.S.C. 150(c)(2)(C) states that in carrying out rulemaking for performance measures and standards, the Secretary shall limit performance measures "to those described in this subsection." One commenter also took the position a GHG performance measure would not be related to any of the measures expressly listed in 23 U.S.C. 150(c). One commenter stated that, because a GHG measure would not be among the types of measures allowed by 23 U.S.C. 150(c), and because there is no ambiguity in the statute, adoption of a GHG measure would violate the separation of powers doctrine in the U.S. Constitution.

Several commenters focused on the possibility of legal authority for promulgating a GHG performance measure stemming from the CMAQ provision in 23 U.S.C. 150(c)(5). Those commenters viewed the term "on-road mobile source emissions" in 23 U.S.C. 150(c)(5) as limited in scope to actions that further the purposes of the CMAQ statute, 23 U.S.C. 149. In their view, any performance measure under 23 U.S.C. 150(c)(5) would have to relate to one or more of the three pollutants listed in the CMAQ statute, 23 U.S.C. 149. Those commenters pointed out that none of the three listed pollutants is a GHG. A few pointed to an FHWA response in its recent final rule for metropolitan and statewide planning as being an admission no authority exists for a GHG measure, citing 81 FR 34050, 34077 (May 27, 2016).

Finally, some commenters suggested FHWA should not issue a GHG performance measure because other Federal offices and agencies have authority over such emissions and already are taking action in this area. They pointed to regulations adopted by the National Highway Traffic Safety Administration and EPA, as well as the recent issuance by the President's Council on Environmental Quality (CEQ) of National Environmental Policy

Act (NEPA) guidance on addressing GHGs.²⁶

In response to the comments on FHWA's legal authority for a GHG performance measure, FHWA first acknowledges the concerns and views expressed by commenters on both sides of the question. Commenters' responses to the NPRM's request for comments on a GHG measure provided important information for FHWA to consider when developing the final rule. After reviewing and fully evaluating all of the comments, FHWA confirmed that it has legal authority to adopt the GHG performance measure contained in this rule. The FHWA disagrees with commenters who stated there is no legal authority under 23 U.S.C. 150 for a GHG performance measure. In 23 U.S.C. 150(c)(3)–(6), the statute defines the general topics of statutory concern to be addressed by performance measures and the related program statutes (*e.g.*, condition of pavements on the Interstate and non-Interstate NHS for the purpose of carrying out 23 U.S.C. 119). While FHWA agrees performance measures adopted under 23 U.S.C. 150 must relate to the measures described in 23 U.S.C. 150(c), the statute gives FHWA the discretion to determine the nature and scope of specific performance measures that will fulfill the statutory mandates in 23 U.S.C. 150(c). Contrary to the interpretation of some commenters, FHWA's response in the final planning rule, stating 23 U.S.C. 150(c)(2)(C) "precludes FHWA from establishing any national performance measures *outside those areas identified in 23 U.S.C. 150*" (87 FR 34050, 34077) (emphasis added), conveyed this same point. Accordingly, in the three rulemakings to implement 23 U.S.C. 150, FHWA has adopted performance measures it determined were related to the 23 U.S.C. 150(c)(3)–(6) areas of concern and the cited program statutes. The FHWA has not adopted any performance measure that falls outside of those statutory parameters. The GHG performance measure established in this rule is no exception.

The FHWA is adopting the GHG performance measure under 23 U.S.C. 150(c)(3), which calls for performance measures that the States can use to assess performance of the Interstate and non-Interstate NHS for the purpose of carrying out 23 U.S.C. 119. 23 U.S.C. 150(c)(3)(A)(ii)(IV)–(V). Section

²⁵ 42 U.S.C. 7602(g),

²⁶ *Final Guidance for Federal Departments and Agencies on Consideration of Greenhouse Gas Emissions and the Effects of Climate Change in National Environmental Policy Act Review*, CEQ (August 1, 2016). Available as of September 14, 2016 at <https://www.fhwa.dot.gov/map21/guidance/guidecmq.cfm>.

150(c)(3) does not impose any limitation on what type of NHS performance may be measured in rules promulgated under 23 U.S.C. 150(c)(3)(A)(ii)(IV)–(V). Consistent with its long-standing practice, FHWA interprets “performance” of the Interstate and non-Interstate NHS in those provisions to include environmental performance. This interpretation is supported by the many title 23 provisions that make the environment an integral part of the Federal-aid Highway Program, such as the national goal of environmental sustainability in 23 U.S.C. 150(b)(6), transportation planning provisions in 23 U.S.C. 134–135, and environmental provisions in 23 U.S.C. 109(c),(g),(h),(i), and (j).²⁷ The FHWA interpretation also is supported by the many FHWA actions to treat the environment, and specifically sustainability and climate change, as part of system performance. Examples include:

- The FHWA Strategic Plan, which embodies this view in its national system performance strategic goal: “The Nation’s Highway system provides safe, reliable, effective and sustainable mobility for all users.”²⁸
- The FHWA 2013 Conditions and Performance Report, which noted the transportation system is best able to reach peak performance when it can support economic competitiveness by providing adequate capacity and reliability while meeting sustainability goals.²⁹ For those reasons, FHWA stated, transportation agencies are being held accountable for how well they address these issues along with safety and state of good repair. The Report discussed the need to address climate change as part of promoting sustainability. The report described sustainability as requiring action to address climate change effects both through the reduction of GHG emissions and by ensuring the transportation system can adapt to future conditions caused by climate change.³⁰
- FHWA’s July 2013 guidance, *Handbook for Estimating Transportation Greenhouse*

Gases for Integration into the Planning Process.³¹

- FHWA’s December 2013 guidance, *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*.³²
- FHWA Order 5520, *Transportation System Preparedness and Resilience to Climate Change and Extreme Weather Effects* (December 15, 2014),³³ which states climate change and extreme weather events are a significant and increasing risk to the safety, reliability, effectiveness, and sustainability of transportation infrastructure and operations. The Order points to the costly and sometimes recurring damage to infrastructure from such climate change effects as sea level rise, resulting in a need to address potential effects of climate change in order to protect the integrity of the transportation system and to ensure the sound investment of taxpayer dollars.³⁴
- The Long Term Bridge Performance Program (enacted under SAFETEA-LU, Pub. L. 109–59, 119 Stat. 1144 (August 10, 2005)). The program defines bridge performance, in part, as a multifaceted issue that involves multiple components and depends on multiple factors, including varying conditions of climate, air quality, and soil properties.³⁵
- The FHWA guidance on environmental performance in infrastructure development, construction, and maintenance.³⁶

Thus, as described in the NPRM for this rulemaking, FHWA already has taken steps to “integrate climate analysis into the transportation planning process” and to “encourage[] transportation agencies to consider GHG

emissions as part of their performance-based decisionmaking . . .” 81 FR at 23830.

Additional statutory support for a GHG measure may be found in 23 U.S.C. 119, which is the program statute referenced in 23 U.S.C. 150(c)(3). Section 119, enacted by MAP–21, sets forth the purposes of the NHPP, eligibilities for NHPP funding, purposes and requirements for State performance management (including asset management, significant progress and reporting requirements for performance measures), Interstate and bridge condition penalty provisions for falling below minimum conditions established by the Secretary, and environmental mitigation. Under the statute, the purposes of the NHPP include “to provide support for the condition and performance of the [NHS].” 23 U.S.C. 119(b). The performance management provisions in 23 U.S.C. 119(e) call for a performance-driven asset management plan that would “support progress toward the achievement of the national goals identified in section 150(b).” The national goals in 23 U.S.C. 150(b) include environmental sustainability. The environmental sustainability goal is to be achieved by “enhancing the performance of the transportation system while protecting and enhancing the natural environment.” 23 U.S.C. 150(b)(6). By incorporating the environmental sustainability goal into 23 U.S.C. 119, the statute affirms environmental sustainability as part of the performance of the NHS addressed by 23 U.S.C. 150(c)(3). Measures for assessing the performance of the NHS for the purpose of carrying out 23 U.S.C. 119 may include measures furthering the environmental sustainability national goal. The GHG performance measure falls within these parameters.³⁷

The FHWA agrees with commenters who cited several provisions in title 23 (23 U.S.C. 101(b)(3)(G), 134(a)(1), 134(c)(1), 134(h), 135(d)(1), and 135(d)(2)) in support of FHWA’s authority to address GHG emissions in this rulemaking. Those provisions identify interrelationships among, and in some cases call for action related to, environment, energy conservation, infrastructure performance, resiliency, and performance-based decisionmaking:

³⁷ Another national goal is congestion reduction (23 U.S.C. 150(b)(3)). In some cases, reduction in GHGs and congestion reduction are linked. For a discussion of the relationship between GHG emissions and congestion, see *Transportation’s Role in Reducing U.S. Greenhouse Gas Emissions, Volume 1, Synthesis Report*, USDOT Report to Congress (April 2010) (available as of September 14, 2016), at <http://www.reconnectingamerica.org/assets/Uploads/DOTClimateChangeReport-April2010-Volume1and2.pdf>.

²⁷ In addition, a number of statutes outside title 23, such as NEPA (42 U.S.C. 4321 *et seq.*), require consideration of the environment as part of developing and implementing infrastructure projects.

²⁸ *FHWA Strategic Plan* (2008–2016). The FHWA first adopted the plan in 2008 (available as of September 14, 2016 at <http://www.fhwa.dot.gov/strategicplan.pdf>). Since then, FHWA has updated the plan periodically, but the strategic goals and objectives have not changed. The FHWA did remove the sections outlining national strategies for achieving the agency’s strategic goals. This was done because the national strategies may change from year-to-year. The current version of the *FHWA Strategic Plan* (2016) is available at <http://www.fhwa.dot.gov/policy/fhplan.cfm> (as of September 14, 2016).

• 23 U.S.C. 101(b)(3)(G) is a transportation policy declaration that “. . . transportation should play a significant role in promoting economic growth, improving the environment, and sustaining the quality of life . . .”.

• 23 U.S.C. 134(a)(1) is a congressional statement of transportation planning policy that it is in the national interest “. . . to encourage and promote the safe and efficient management, operation, and development of surface transportation systems . . . while minimizing transportation-related fuel consumption and air pollution through metropolitan and statewide transportation planning processes identified in this chapter . . .”.

• 23 U.S.C. 134(c)(1) requires metropolitan planning organizations to develop long range plans and transportation improvement programs to achieve the objectives in section 134(a)(1) through a performance-driven, outcome-based approach to planning.

• 23 U.S.C. 134(h) defines the scope of the metropolitan planning process. Paragraphs (h)(1)(E) and (I), respectively, require consideration of projects and strategies that will “. . . protect and enhance the environment, promote energy conservation, improve the quality of life . . .” and “. . . improve the resiliency and reliability of the transportation system . . .”.

• 23 U.S.C. 135(d)(1) defines the scope of the statewide planning process. Paragraphs (d)(1)(E) and (I) respectively, require consideration of projects, strategies, and services that will “. . . protect and enhance the environment, promote energy conservation, improve the quality of life . . .”, and “. . . improve the resiliency and reliability of the transportation system . . .”.

• 23 U.S.C. 135(d)(2) requires the statewide transportation planning process to “. . . provide for the establishment and use of a performance-based approach to transportation decisionmaking to support the national goals described in section 150(b) of this title . . .”.

In addition to the provisions listed above, the performance-based planning requirements in 23 U.S.C. 134(h)(2)(A) mirror the statewide provision in 23 U.S.C. 135(d)(2), stating the “. . . planning process shall provide for the establishment and use of a performance-based approach to transportation decisionmaking to support the national goals described in section 150(b) of this title . . .”.

Read together, these title 23 provisions make it clear that assessing infrastructure performance under 23 U.S.C. 150(c)(3) may properly encompass assessment of environmental performance, including GHG emissions and other climate-related matters. The fact that other Federal agencies have jurisdiction to act on those matters (in this case, climate change and GHGs) does not preclude FHWA from taking actions to help ensure the Federal-aid Highway Program fulfills its statutory objectives in title 23.

With respect to comments regarding FHWA's authority to establish a GHG performance measure pursuant to 23 U.S.C. 150(c)(5) (CMAQ), FHWA agrees such authority exists, but FHWA has chosen to adopt the measure under 23 U.S.C. 150(c)(3) (NHPP) because it is more consistent with FHWA's view that environmental performance is a key indicator of the success of the highway system, and because 23 U.S.C. 150(c)(3) permits the application of the measure to the entire NHS. The FHWA also agrees with commenters that FHWA has authority to establish performance standards pursuant to 23 U.S.C. 150(c)(1) and that the performance standard authority is not subject to the limiting language in 23 U.S.C. 150(c)(2)(C). However, this rulemaking is for performance measures, and FHWA does not believe it would be appropriate to use this rulemaking to establish a GHG emissions performance standard for States and MPOs.

Establishing a GHG Performance Measure in This Rulemaking

Several commenters argued that, should FHWA decide to establish a GHG performance measure, it should do so through a separate rulemaking. They claimed that the NPRM did not provide sufficient detail about the type of measure FHWA might adopt for them to comment on the issue meaningfully. The FHWA disagrees. The NPRM clearly signaled that FHWA was considering a GHG performance measure, pointed out the substantial body of research and guidance that FHWA and others have developed on ways to incorporate GHGs into performance-based transportation planning and programs, requested comment on a series of questions about whether and how to establish a GHG performance measure, and identified a preferred approach if a measure was to be adopted. The FHWA received many substantive comments in response to these questions, including from those who claimed the need for another round of rulemaking. These comments included numerous suggestions on how to structure (and not structure) a GHG measure. The FHWA relied on these comments to refine the measure included in the final rule. The CO₂ performance measure established in this rule is the same as that described in the NPRM and is consistent with elements recommended in several of the comments received. The detail and substance of information and suggestions received in response to the questions FHWA posed clearly show that interested parties were capable of providing, and in fact did provide,

informed comments regarding the establishment of a GHG performance measure.

Discussion of Comments Received in Response to NPRM Questions

a. Should FHWA include a measure that measures Greenhouse Gases (GHG)?

The FHWA's decision to establish a GHG measure is responsive to three major categories of comments:

(1) Numerous commenters claimed that the set of performance measures proposed in the NPRM was too narrowly focused on the speed of vehicles moving through the system, to the detriment of other key aspects of system performance such as environmental performance, and the ability of people to reach a variety of destinations conveniently and affordably by multiple modes.³⁸ The FHWA agrees that as sound policy, the set of national performance measures must cover multiple key aspects of performance, otherwise decisionmaking may not properly take into account important aspects of performance. In response, this final rule includes measures on GHG emissions and modal share and consolidates NPRM measures stakeholders perceived as duplicative.

(2) Multiple commenters noted that a GHG measure would provide decisionmakers with better information about the transportation system's GHG emissions and a means for measuring progress. The State DOTs from California, Colorado, Delaware, Minnesota, Oregon, Pennsylvania, Vermont, Virginia, and Washington submitted a joint letter supporting the creation of a measure specific to GHG emissions from the transportation sector. The National Association for Clean Air Agencies noted that performance measures create transparency and help policy makers to determine how their goals are most likely to be achieved. The FHWA agrees with these comments.

(3) Numerous commenters³⁹ argued that a GHG measure should be implemented because policies to reduce GHG pollution from transportation are essential to minimize the impacts from climate change, which include sea level rise and increased frequency and

³⁸ See comments from New York State DOT, Nelson Nygaard, Sierra Club, Utah DOT, Association of Metropolitan Planning Organizations (AMPO), and the National Association of Regional Councils (NARC), as well as citizen letter campaigns sponsored by Transportation for America and Smart Growth America.

severity of heat waves and heavy downpours that threaten human health, agriculture, the economy, and transportation.⁴⁰ Reports from FHWA and the National Academy of Sciences detail negative impacts of climate change on the NHS.⁴¹

The FHWA agrees with these comments. Greenhouse gas emissions from the transportation sector recently surpassed those from electricity generation, making transportation the largest source of GHG emissions in the U.S.⁴² After decades of rapid increases, U.S. transportation carbon emissions are projected to remain relatively flat in the future, as future increases in freight and passenger travel are counterbalanced by stricter fuel economy standards for light-duty vehicles and new standards for medium- and heavy-duty vehicles.⁴³ Significantly greater reductions in transportation GHG emissions are needed to meet the near-term target of 26 to 28 percent below 2005 levels by 2025 and long-term trajectories of 80 percent or more by 2050 which would be consistent with the U.S. Midcentury Strategy for Deep Decarbonization and consistent with the long-term goals of the Paris Agreement.⁴⁴ Achieving CO₂

reductions of this magnitude will require actions such as reducing the growth in future travel activity and improving system efficiency, which are influenced by the planning activities and investment decisions of State DOTs and MPOs. A GHG measure emerged as a leading candidate for measuring the environmental aspect of the performance of the highway system during FHWA and stakeholder discussions in 2009.⁴⁵ Subsequently, FHWA initiated a research project to investigate GHG measures that would align with performance-based planning and programming, as well as how State DOTs and MPOs could go about implementing such a measure. A number of FHWA stakeholders served on the expert panel that provided input into the development of the resulting research report, *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*.⁴⁶

The FHWA disagrees with commenters that argued that FHWA should not include a GHG measure because they felt that State DOTs and MPOs have insufficient ability to impact GHG emissions. State DOTs and MPO recipients of Federal transportation funds have control or influence over many strategies that impact transportation GHG emissions. These strategies can be divided into four major groups:⁴⁷

(1) *System efficiency*. These strategies optimize the operation, use, and maintenance of transportation networks, which in turn reduce GHG emissions per unit of travel. Relevant strategies include speed harmonization, speed limit reduction and enforcement, ramp metering, incident management, traveler information, traffic signal timing optimization, bottleneck relief, anti-idling ordinances, congestion pricing, and the improvement in freight intermodal connections.

(2) *Reducing the growth in VMT*. These strategies reduce the need to travel, increase vehicle occupancies,

and shift travel to more energy efficient options. Relevant strategies include integrated transportation and land use planning in coordination with local governments, public transportation and non-motorized transportation improvements and incentives, car sharing, employer-based strategies (such as telework), parking management and pricing, road pricing, and pay-as-you drive insurance.

(3) *Promoting alternative fuel vehicles*. State DOTs and MPOs can help plan for the siting and deployment of electric vehicle charging stations, designate and promote alternative fuel corridors, promote workplace charging initiatives, and promote adoption of alternative vehicles within agency and private fleets.

(4) *Increasing vehicle fuel efficiency*. State DOTs and MPOs can help bring to market higher efficiency vehicles and improve the performance of in-use vehicles. Relevant strategies include scrappage programs for low-mileage vehicles, feebates, heavy-duty vehicle retrofits, truck stop electrification, and eco-driver education and training.

The FHWA disagrees with the American Petroleum Institute, which suggested that FHWA should not include a performance measure on GHG because transportation GHG emissions are regulated by fuel economy standards. Continued growth in VMT is expected to counterbalance improvements in fuel economy, and as such, fuel economy standards alone are insufficient to reach GHG goals.

To allay some of the burden concerns raised by those arguing against a GHG emissions measure, FHWA has chosen a measure that relies on existing data and is straightforward to calculate. Limiting the measure to CO₂ simplifies calculations (since unlike the other GHGs, it is emitted in direct proportion to the amount of fuel burned), while still capturing 95 percent of transportation GHGs.⁴⁸ Limiting the measure to on-road emissions rather than full life cycle also simplifies analysis. The overall burden on State DOTs and MPOs is further reduced in the final rule by the elimination of the two NHPP peak hour performance measures and the truck congestion measure.

⁴⁸ U.S. Department of Transportation, *Report to Congress: Transportation's Role in Reducing U.S. Greenhouse Gas Emissions*, 2010. The other greenhouse gases from transportation are hydrofluorocarbons (HFCs), methane (CH₄) and nitrous oxide (N₂O).

The Transportation Research Board of the National Academy of Sciences, *The Potential Impacts of Climate Change on US Transportation*, 2008. <http://www.trb.org/Main/Blurbs/156825.aspx>.

Impacts include increases in flooding damaging roadways and disrupting travel, increases in heat waves degrading materials and impacting worker health and productivity, permafrost melt destabilizing roadways, changes in precipitation patterns leading to more landslides, drought conditions causing soil shrinkage and pavement cracking, as well as increased susceptibility to wildfires, causing road closures. Climate change increases the frequency and/or intensity of many extreme weather events that damage or disrupt transportation. Scenarios with lower greenhouse gas emissions in the future show lower negative impacts on the transportation system.

⁴⁷ U.S. Department of Transportation, *Report to Congress: Transportation's Role in Reducing U.S. Greenhouse Gas Emissions*, 2010.

Should the measure address all on-road mobile sources or focus only on a particular vehicle type?

All of the commenters who responded to this question favored a measure that addressed all on-road mobile sources. The FHWA agrees. This approach allows for a more comprehensive picture of the transportation system's contribution to emissions, from passenger vehicles to freight movement.

b. Should the measure be normalized by changes in population, economic activity, or other factors (e.g., per capita or per unit of gross state product)?

Multiple commenters suggested that the measure examine both total emissions and be normalized by changes in population. Total emissions will need to be reduced to achieve GHG reduction goals; normalizing on a per capita basis acknowledges the fact that many States and regions are experiencing significant population growth. In addition to normalizing by population, the Texas DOT suggested normalizing by gross State product, port activity, State land mass, and consideration of the current built environment. Another commenter noted that a GHG performance measure indexed to gross State product or other economic indicators could rise or fall quickly based on economic trends that are difficult to predict, limiting its value in decisionmaking.

The FHWA decided a total on-road CO₂ measure (limited to travel on the NHS) is the best option. It makes assessment of progress toward performance management targets and national U.S. goals relatively easy. In contrast, CO₂ per capita could be decreasing while total on-road CO₂ is still increasing, failing to provide the total emissions data needed to understand and measure the performance goal of environmental sustainability.

The FHWA notes that State DOTs and MPOs have discretion to use additional performance measures and may wish to normalize CO₂ by total population as an additional useful indicator in their analyses. An FHWA research project identified light-duty vehicle CO₂ emissions per capita as a helpful additional measure to combine with the total on-road emissions measure. The research project report also includes information on data sources and methodologies.⁴⁹

c. Should the measure be limited to emissions coming from the tailpipe, or should it consider emissions generated upstream in the life cycle of the vehicle operations (e.g., emissions from the extraction/refining of petroleum products and the emissions from power plants to provide power for electric vehicles)?

Some commenters, including most of the MPO and State DOT commenters, recommended that the measure focus solely on tailpipe emissions, noting that tailpipes are the largest source of transportation emissions. These commenters noted that upstream fuel cycle emissions are more difficult to calculate and are largely outside the control of the transportation agency.

Others, including the Center for Neighborhood Technology, Natural Resource Defense Council, the National Association for City Transportation Officials, and the New York City DOT recommended that the performance measure include emissions generated upstream.

Several commenters, including the Sabin Center for Climate Change Law and the CMAP, recommended an intermediate approach to account for the electricity used to power electric vehicles.

After considering these comments and balancing the factors, FHWA decided to limit the measure to on-road CO₂ emissions for reasons of focus and simplicity.

One difficulty with upstream emissions from petroleum extraction and refining is they vary by where and how the fuel is extracted. An option is to use the national average adjustment factor of 27 percent to account for the upstream fuel-cycle emissions.^{50 51 52} This methodology can be helpful for understanding transportation's overall contribution to GHG emissions, but does not add value as a measure of State or MPO performance. Adjustments based on the national average fail to provide the type of differentiated information needed to capture the outcomes of State and MPO actions. A measure focused on tailpipe emissions simplifies the calculations and provides the type of specific information helpful to States and MPOs as they determine what measures to adopt to influence GHG outcomes.

The FHWA considered the comments supporting a measure that captures upstream emissions from electric cars,

but declines to do so at this time because of the complexity it would add to the measure. Upstream emissions from electricity are more difficult to calculate because one must estimate the level of electricity consumed by electric vehicles. These data are not tracked separately and generally are estimated based on electric vehicle registration data. In addition, excluding upstream electricity emissions will preserve the rule's focus on on-road emissions. While FHWA has decided to exclude upstream emissions from the GHG measure in this rule, research indicates electric vehicles typically produce lower lifecycle GHG emissions than the average gasoline-based vehicle, even when using electricity from the highest carbon U.S. electricity grids.^{51 thnsp;52} Transportation agency actions to encourage electric vehicle use (such as deployment of charging infrastructure, preferred use of High Occupancy Vehicle/express lanes for electric vehicles, etc.) will result in reduced overall CO₂ emissions as well as reduced CO₂ emissions in the tailpipe measure.

State DOTs may voluntarily report additional measures of CO₂ performance, in addition to their baseline requirement. These additional measures, or variations, could include metrics for electric vehicle emissions, VMT-based estimates, and/or per capita emissions, among other options to test innovative reporting options. The FHWA's online reporting portal allows the State to attach supplemental information at their discretion.

d. Should the measure include non-road sources, such as construction and maintenance activities associated with Title 23 projects?

Several commenters, including the Georgia and Minnesota DOTs, Denver Regional Council of Governments, and the San Francisco Municipal Transportation Agency, recommended that the measure be limited to tailpipe emissions. These commenters said that tailpipe emissions make up the majority of transportation emissions and that construction and maintenance emissions are more difficult to calculate. Other commenters recommended that tracking emissions from construction and maintenance of highway projects is desirable, but that emissions from

⁵¹ Union of Concerned Scientists, *Cleaner Cars from Cradle to Grave*, 2015. http://www.ucsusa.org/clean-vehicles/electric-vehicles/life-cycle-ev-emissions#.V_Ug2E2V_ct.

⁴⁹ FHWA, *A Performance-Based Approach to Addressing Greenhouse Gas Emissions through Transportation Planning*, December 2013.

⁵⁰ The U.S. EPA published estimates of fuel-cycle greenhouse gas emissions in "Greenhouse Gas Emissions from the U.S. Transportation Sector, 1990–2003." ¹ The U.S. EPA calculated a national average adjustment factor of 1.27 (or 27 percent).

facility use (*i.e.*, tailpipe emissions) warrant the largest share of attention and analysis.

The FHWA agrees with commenters that the measure should be limited to tailpipe emissions. Accordingly, construction and maintenance emissions are not included in the CO₂ emissions measure because of the complexity and burden it would add to the measure. The level of construction and maintenance emissions varies year to year based on project cycles. This means that grouping them with on-road vehicle emissions in a single performance measure would make it more difficult to analyze trends and ascertain progress. A separate measure for construction and maintenance CO₂ emissions may be helpful, but FHWA is not adopting such additional measure in this rulemaking. The FHWA wishes to limit the performance management burden on State DOTs and MPOs by, in part, limiting the number of performance measures adopted in this rulemaking.

However, FHWA encourages State DOTs and MPOs efforts to track and reduce construction and maintenance CO₂ emissions. One tool for this is FHWA's Infrastructure Carbon Estimator (ICE)⁵³ tool. These emissions can be included in other CO₂ emissions analyses that agencies may be conducting during the transportation planning process.

e. Should State-level CO₂ emissions be estimated based on gasoline and diesel fuel sales, system use (vehicle miles traveled [VMT]), or other surrogates?

Several commenters, including the DOTs of California, Colorado, Delaware, Virginia, Oregon, Pennsylvania, Vermont, Wisconsin, and Minnesota, recommended that, at least in the short term, the measure should use fuel sales data to calculate CO₂ emissions. They noted that CO₂ is emitted in direct proportion to the amount of fuel burned and that States already report fuel sales data to FHWA. However, commenters noted some disadvantages of using fuel sales data: It is not available at finer geographic scales, such as the metropolitan level, and there are boundary issues with fuel purchased in one State but combusted in another State or region.

Other commenters, including the Georgia DOT, Denver Regional Council of Governments, Southwest Energy Efficiency Project, and the Center for Neighborhood Technology,

recommended that the measure should use VMT as the basis for estimating CO₂ emissions. They stated that using VMT data from travel demand models combined with the EPA MOVES⁵⁴ model to estimate CO₂ emissions based on travel distances, speeds, and operating conditions provide an accurate picture of on-road CO₂ emissions in a State or region. In addition to calculating current emissions, this type of analysis is also helpful in understanding how State DOT and MPO investment decisions and policies, such as adding proposed new lane miles, can influence future CO₂ emissions by altering inputs to the travel demand model. The commenters acknowledged, however, that many State DOTs and MPOs lack the modeling expertise and quality data needed to use a method that relies on a travel demand model in combination with MOVES.

The FHWA decided that for calculating the CO₂ emissions performance measure, States will use a methodology that relies on fuel sales volumes. This method is simple, accurate, and relies on data that States already report to the agency. Commenters pointed out a fuel-based measure would have minimal implementation costs as compared to a VMT-based measure, which would require transportation agencies to dedicate staff to the effort and incur new ongoing costs.

Fuel-based methods typically rely on estimates of fuel sales and directly convert fuel use estimates into CO₂ emissions estimates based on the carbon content of each fuel. The basic equation for estimating CO₂ emissions using fuel sales is:

$$\text{Fuel Consumed} \times \text{CO}_2 \text{ emissions per unit of fuel} = \text{CO}_2 \text{ Emissions}$$

The CO₂ emissions factor depends on the fuel type (*e.g.*, motor gasoline, diesel).

The VMT-based methods rely on quantifying the amount of vehicle travel and then connecting this information to an estimate of CO₂ emissions using emission factors or an emissions model. The basic equation for estimating emissions using VMT is:

$$\text{VMT} \times \text{CO}_2 \text{ per VMT} = \text{CO}_2 \text{ Emissions}$$

However, to achieve an accurate picture and assess improvements, the process would have to use different emissions factors (typically presented in grams of CO₂ per mile) for different vehicle types,

classes within vehicle types, technology/fuels types, speeds, and operating conditions.

For the GHG performance measure, State DOTs must use the fuel sales methodology for calculating State on-road CO₂ on the NHS. However, in addition to the baseline requirement for State DOTs to report on-road CO₂ on the NHS using a fuel sales methodology, State DOTs may voluntarily report CO₂ emissions using alternative methods, such as VMT based methods. State DOTs would attach this as supplemental information in FHWA's online reporting portal.

For metropolitan planning areas, MPOs and State DOTs are granted flexibility in how they calculate the required CO₂ performance measure. The FHWA adopted these different approaches because of: (1) The lack of data available on fuels sales at the metropolitan planning area level and (2) the need to ensure one consistent method for State DOT measures in order to understand national performance trends and to allow for a consistent approach to progress determinations.

Methodologies available for calculating on-road NHS CO₂ emissions for metropolitan planning area include (in order of level of effort):

Fuel-based Methods:

If fuel sales volumes are available at the metropolitan planning area level, MPOs may use the same fuel-based method as outlined for the State DOTs (fuel volumes multiplied by emissions factors). The strengths of this method are that it is simple and consistent with the State method. There are limitations to this method. Fuel sales data are not usually available at the metropolitan planning area level. Also, fuel sales may not match well with actual travel activity in smaller geographic areas, as drivers may purchase fuel in one area and use it in another area. This is much more of a concern at the metropolitan planning area level than the State level since the metropolitan planning area is a smaller geographic unit.

Another option is for MPOs to allocate GHG emissions based on metropolitan planning area share of NHS VMT. This is done by multiplying the statewide NHS on-road CO₂ emissions by the percent of the State's NHS travel that occurs within the MPA. The strengths of this method are that it is simple, providing a rough estimate of the metropolitan planning area share of CO₂ emissions. However, this method does not account for differences between metropolitan areas and between metropolitan and rural areas in vehicle fleets, speeds, and operating

⁵³ FHWA, *Infrastructure Carbon Estimator*, http://www.fhwa.dot.gov/environment/climate_change/mitigation/tools/carbon_estimator/.

⁵⁴ The Motor Vehicle Emissions Simulator (MOVES) is EPA's official model for estimating emissions from cars, trucks and motorcycles. <http://www.epa.gov/otaq/models/moves/index.htm>.

conditions. It will not accurately capture some types of strategies that the MPO may use to reduce CO₂ emissions, such as traffic smoothing with roundabouts or advanced signal timing.

VMT-based Methods:

The MPOs may use VMT from HPMS and national average emissions factors per mile of travel. The strengths of this method are that it is simple and well-gearred toward areas without network travel models. In addition, FHWA will provide emissions look-up tables by types of facilities and speed ranges reflecting national averages. The main limitation is that it does not account for the range of factors that vary in different locations and impact fuel consumption per mile of travel (and consequently CO₂ emissions per mile of travel), such as vehicle fleet composition, and operating conditions.

The MPOs also may use VMT from travel demand models combined with MOVES.⁵⁵ The strengths of this method include that MPOs in air quality nonattainment and maintenance areas are already conducting this analysis and can include CO₂ emissions in the MOVES output without additional effort. It provides robust and granular information on emissions. In addition to estimating current emissions, it is also well suited to support target-setting and analyze impacts of different transportation investment strategies on future emissions. However, some travel demand models are not sensitive to some CO₂ emissions reduction strategies such as the implementation of intelligent transportation system (ITS) strategies and operational improvements, the provision of pedestrian and bicycling infrastructure, and mixed use development. For areas not already using MOVES, MPOs will need to assemble local data or rely on default data, (relying on default data reduces accuracy). Areas not already using MOVES will need to become familiar with how to use the tool. Information on MOVES training is available on EPA's MOVES Web page: <https://www.epa.gov/moves/moves-training-sessions>.

A third option is FHWA's Energy and Emissions Reduction Policy Analysis Tool (EERPAT). The EERPAT is an integrated modeling system designed specifically to evaluate strategies for reducing surface transportation GHG emissions. It uses emissions factors from MOVES. There are several strengths to this method. In addition to estimating current emissions, EERPAT is also well suited to target-setting and analyzing impacts of different transportation

investment strategies on future emissions. It is sensitive to a number of strategies that are difficult to analyze using travel demand models, such as mixed use development, car sharing and provision of non-motorized infrastructure. The EERPAT can evaluate future changes in land use and is sensitive to external changes in the price of fuel. It can incorporate changes in vehicle technology, including the rebound effect from lower per-mile travel costs. It can be used to assess the overlapping effects of strategies applied in combination. The limitations of this method include the large number of model inputs required, some of which may be difficult to obtain. The EERPAT does not include a detailed representation of the transportation network, and has limited sensitivity to the impact of additional roadway and transit capacity.

The FHWA's *Handbook for Estimating Transportation Greenhouse Gases for Integration into the Planning Process* provides step-by-step instructions on how to use these methods, as well as information on strengths and limitations of each. If MPOs have the technical capacity to use MOVES or EERPAT, FHWA encourages them to do so since they are more accurate.

f. Due to the nature of CO₂ emissions (e.g., geographic scope and cumulative effects) and their relationship to climate change effects across all parts of the country, should the measure apply to all States and MPOs? Are there any criteria that would limit the applicability to only a portion of the States or MPOs?

Nearly all commenters agreed that if a GHG measure were established, it should apply nationwide to all State DOTs and MPOs since all GHG emissions have the same impact on climate no matter where they are generated. The Air Pollution Control Division of the Colorado Department of Public Health and Environment recommended measuring performance on a statewide basis, not locally or regionally. The California DOT recommended that the measure apply and be reported by all States and that MPOs be encouraged to participate in target-setting discussions. Similarly, the North Front Range MPO suggested that the role of MPOs be limited to participating with State DOTs in target setting and development of reduction strategies.

A building materials firm, CEMEX, suggested that efforts should focus on the roads with the most traffic and trucks, namely the NHS.

After considering the comments received, FHWA decided that the measure should apply to the NHS in all States and MPOs. The measure is limited to CO₂ emissions on the NHS since the measure is to assess the performance of the NHS, per 23 U.S.C. 150(c)(3)(A)(ii)(IV) and (V). Existing data do not differentiate the exact volumes of fuel burned on the NHS versus the volume of fuels burned on other roads. Therefore, States will use VMT data to calculate the portion of travel that occurs on the NHS versus other roads and use that proportion to estimate the proportion of CO₂ emissions on the NHS.⁵⁶ Table VM-3 Federal-Aid Highway Travel (Annual Vehicle-Miles), found in FHWA's *Highway Statistics*, supplies the needed VMT information.⁵⁷

g. Would a performance measure on CO₂ emissions help to improve transparency and to realign incentives such that State DOTs and MPOs are better positioned to meet national climate change goals?

Several commenters noted that a CO₂ performance measure would help transportation agencies examine trends and analyze the effectiveness of strategies in achieving their goals. They also noted that it would create transparency, allowing stakeholders and the public to see what goals are being set, how they are being pursued, and the results the measure produced. The State DOTs of California, Colorado, Delaware, Minnesota, Oregon, Pennsylvania, Virginia, Vermont, and Washington recommended that FHWA work with States to develop a national climate change goal for transportation that aligns with the Paris Climate Change Agreement. These DOTs suggested that States should use a CO₂ performance measure to drive decisions that help to meet or exceed the national goals under that agreement.

The Georgia DOT noted that the performance measure's effect on transparency would depend on the transparency and complexity of the measure itself and the associated reporting requirements. A GHG measure could help align incentives with national climate change goals, but would be an additional factor to

⁵⁶ The FHWA recognizes that this is not a perfect proxy, as speeds, operating conditions, and vehicle types on the NHS differ from those on other roads and differ between States. However, in balancing the competing goals of simplicity and precision, FHWA believes that this approach provides actionable information that DOTs and MPOs can use in evaluating system performance and making decisions, without significantly increasing workloads.

⁵⁷ Available at <https://www.fhwa.dot.gov/policyinformation/statistics.cfm>.

⁵⁵ Or EMFAC in California.

consider in the tradeoff analysis conducted under a performance-based planning and programming approach.

The FHWA agrees with these comments. The CO₂ performance measure adopted in this rule can serve to advance the environmental performance of the NHS as well as to drive decisions that contribute to national GHG reduction goals, such as those described in the President's Climate Action Plan.⁵⁸ The simplicity of the GHG performance measure and the reporting requirements will make it easier for States and MPOs to administer the measure and their targets, and to incorporate reduction strategies into their planning process and investment decisions.

The Texas DOT suggested that any GHG emission reduction that State DOTs or MPOs could achieve would be small compared to the overall level of emissions. The FHWA notes that climate change results from the incremental addition of GHG emissions from millions of individual sources, which collectively have a large impact on a global scale. The totality of climate change impacts is not attributable to any single action, but is exacerbated by a series of actions, including actions taken under the Federal-aid Highway Program. Therefore, a statement that emissions from a proposed action represent only a small fraction of global emissions is essentially a statement about the nature of the climate change challenge⁵⁹ and is not an appropriate basis for deciding whether or to what extent to consider CO₂ emissions from transportation in the performance management framework.

Publicly-available FHWA reports provide detailed guidance on how State DOTs and MPOs can include GHG emissions measures in performance management and how to estimate emissions levels.⁶⁰

h. The target establishment framework proposed in this rulemaking requires that State DOTs and MPOs would establish 2 and 4 year targets that lead to longer term performance expectations documented in longer range plans. Is this framework appropriate for a CO₂ emissions measure?

Several commenters, including the California, Minnesota, and Washington DOTs, and the North Front Range MPO, recommended that the measure have 4- and 20-year targets. These commenters suggested that a 2-year target may be too short to demonstrate significant changes to statewide CO₂ emissions. They said that a 4-year, short-term target would align the CO₂ measure with other national system performance measures and the 20-year long-term CO₂ performance target would align with the long-range planning timeline.

Some commenters suggested targets align with other processes, such as the timing cycles for transportation improvement programs (TIPs) (4 years), long range transportation plans (20 years), and air quality conformity analyses.

The FHWA decided that making the CO₂ measure consistent with the other NHPP performance measures would ease and streamline implementation. Even though a 2-year target is a very short timeframe, it can indicate progress toward a longer term goal and can reflect short-term actions such as operational improvements. Consistent with the other performance measures, for the CO₂ measure, State DOTs must establish both 2- and 4-year targets. The MPOs are subject only to a 4-year target-setting requirement for CO₂ emissions and MPOs must either:

- Agree to plan and program projects so that the projects contribute toward the accomplishment of the relevant State DOT target for the performance measure; or
- Commit to a quantifiable 4-year target for the performance measure for their metropolitan planning area.

In making this decision, FHWA does not discount the role of statewide and metropolitan long range transportation plans in performance management. These long range plans (20 years or more) include long-term expectations for the performance measures. The longer-term performance expectations are particularly important for CO₂ emissions as many reduction strategies, such as integrated land use and transportation planning or provision of new public transit systems, take years to implement or show impacts.

The FHWA also notes that the planning regulations relate directly to the performance management

regulations. The long range (20-year) transportation plans must include the required performance measures and targets (including for CO₂) and a system performance report that evaluates the condition and performance of the transportation system with respect to the performance targets. The short term (4-year) programming STIPs and TIPs must include a discussion of the anticipated effect of the STIP and TIP toward achieving the performance targets in the long range transportation plans. And for MPOs, the TIP must be designed such that once implemented, it makes progress toward achieving the performance targets in the long range plan.

The relevant regulatory sections are:

- 23 CFR 450.216(f)(1) and (2) and 450.324(f)(3) and (4) require that the long-range statewide transportation plan and the metropolitan transportation plans include a description of the performance measures and performance targets used in assessing the performance of the transportation system and that they also include a system performance report evaluating the condition and performance of the transportation system with respect to the performance targets.

- 23 CFR 450.218(q) and 450.326(d) require that the STIP and TIP shall include, to the maximum extent practicable, a discussion of the anticipated effect of the STIP and the TIP toward achieving the performance targets in the long-range statewide transportation plan and the metropolitan transportation plans. Also, § 450.326(c) requires that the TIP shall be designed such that once implemented, it makes progress toward achieving the performance targets in the metropolitan transportation plan.

State DOTs and MPOs both have substantial flexibility in choosing targets. As with other performance targets for the performance management measures, targets are generally established based both on policy aspirations and on analysis indicating what is believed to be attainable. As such, when establishing their CO₂ emissions targets, State DOT and MPO considerations likely would include these three factors:

(1) Projections of business-as-usual future CO₂ emissions. The U.S. Department of Energy, Energy Information Agency (EIA) provides projections taking into account Federal fuel economy standards and current VMT projections. Some States have revenue forecasting models that project future fuel sales that can be used to project future emissions levels.

(2) Policy goals. Twenty States have State-specific GHG emission reduction targets from statewide climate action

plans and/or State legislation.⁶¹ The U.S. has committed to reduce GHG emissions 26 to 28 percent below 2005 levels by 2025 and 80 percent or more by 2050.⁶²

(3) Analysis of what is attainable. For the purposes of target-setting, analyses of the potential effectiveness of various strategies may vary in level of effort and technical capabilities required. Options for analysis include:

- Using published information on the approximate magnitude of emissions reduction that can be expected from different strategies. The FHWA's *Reference Sourcebook for Reducing GHG Emissions from Transportation Sources*⁶³ provides ranges of emission reductions as well as costs, barriers to implementation, example projects, and co-benefits.
- Using sketch planning or scenario planning tools.
- Using VMT from travel demand models and MOVES.
- Using EERPAT, FHWA's integrated modeling system designed specifically to evaluate strategies for reducing surface transportation GHG emissions.

Note that while the rule requires State DOTs to use the fuel sales-based method for calculating past year CO₂ for national consistency reasons, they may use any variety of analytical methods for target-establishment. In fact, while fuel-sales methods are simpler and more accurate for calculating past CO₂, VMT-based methods will generally be more helpful in projecting future emissions and analyzing reduction strategies. This is because VMT-based forecasting methods can model changes in transportation demand resulting from various strategies.

i. Should short term targets be a reflection of improvements from a baseline (e.g., percent reduction in CO₂ emissions) or an absolute value?

Many commenters recommended that targets be expressed as a percent change from a certain year. They indicated it may be difficult to grasp the meaning of an absolute number of metric tons of CO₂. In contrast, decisionmakers and the public can more easily interpret a percent change and understand how it relates to existing State, national, and international GHG goals. It is common practice to express GHG goals as a percent reduction. The State DOTs of

California, Colorado, Delaware, Minnesota, Oregon, Pennsylvania, Virginia, Vermont, and Washington recommended expressing the targets as percent reduction below a 2005 reference year to be consistent with the U.S. GHG reduction goals established under the Paris Climate Change Agreement. The Atlanta Regional Council suggested that CO₂ targets be expressed as percent reductions below what would be achieved from fuel economy standards alone.

The FHWA decided that the measure will be expressed as a percent change from 2017 NHS on-road CO₂ levels. The FHWA agreed with commenters that a percent change provides more meaning and context to decisionmakers and the public than a certain number of metric tons of CO₂. The FHWA agreed with commenters that a 2005 baseline would be in line with national goals. However, the size of the NHS materially changed after 2005 due to reclassification of roadways under MAP-21. The changes to the NHS, which began in 2012 and have continued in some States, are expected to stabilize by 2017. Using the 2017 reference date avoids the type of significant data adjustment that would be needed if 2005 were used as the reference date. Using 2017 as the reference date for the GHG measure also makes the starting point for the GHG measure more compatible with the first baseline year used in other measures.

j. What data sources and tools are readily available or are needed to track and report CO₂ emissions from on-road sources? What tools are needed to help transportation agencies establish targets for a CO₂ emission measure?

Commenters noted several data sources and tools are readily available:

- Annual fuel sales volumes by State;
- EIA data on CO₂ emissions per gallon of fuel;
- VMT data in HPMS;
- CO₂ emissions per mile of travel based on vehicle type, speed, and operating conditions available in EPA MOVES model⁶⁴;
- Fleet composition from vehicle registration records; and
- Argonne National Laboratory's national Vision model and California's Vision model, which allow States to evaluate vehicle technology, fuel, and efficiency scenarios for meeting air quality and climate goals.

Commenters also noted that the following tools and resources would be helpful:

- Tools and procedures to estimate GHG emissions and establish targets that are aligned with existing tools States and MPOs use in the planning process.
- Tools pre-populated with emissions factors.

- Tools to determine CO₂ targets and understand the probable efficacy of potential emission reduction strategies.

- New air quality calculators that incorporate GHG emissions or revised existing calculators that include GHG emissions.

- Tools that would enable agencies to measure tailpipe CO₂ emissions based on system use, including:

- Enhanced travel demand models for areas not sufficiently covered by existing models and new models that show the synergistic relationship between transportation and land use.

- Assistance developing MOVES inputs and running MOVES.

- Estimates of "business as usual" emissions in target years.

The FHWA has developed a series of tools and resources to assist State DOTs and MPOs in developing and evaluating effective GHG emissions reduction strategies. More information is available at: www.fhwa.dot.gov/environment/climate_change/mitigation/. The FHWA will continue to update tools and provide technical assistance. To minimize workloads, FHWA will provide on its Web site the CO₂ per gallon of fuel for all of the common motor fuels. In addition, FHWA will provide look-up tables with national averages of grams of CO₂ per VMT for different speeds for the national average vehicle fleet.

The FHWA recognizes that the measure of CO₂ emissions chosen here—the percent change in tailpipe CO₂ emissions on the NHS compared to the Calendar Year 2017 level—is imperfect. Data is not available to directly measure this, so we have chosen to measure this indirectly by calculating fuel sales and multiplying the associated CO₂ emissions by the proportion of VMT that takes place on the NHS. This method results in a measure that is only partially affected by projects that reduce emissions on the NHS. For example, if there is a significant downturn in the economy and people choose to drive less, this would result in a reduction in the measure. If people choose to drive the same amount, but shift some of their driving to non-NHS roads, this would also result in a reduction in the measure. If gas prices fall temporarily and people drive more, this would result in an increase in the measure. In addition, the measure does not take account of upstream emissions, so if people shift to EVs, the higher upstream emissions associated with this would not be captured. For these reasons, FHWA will, in the future, re-evaluate this measure and consider whether data are available to more directly measure emissions effects of NHS projects

⁶⁴ Or EMFAC in California.

undertaken by States or MPOs. If more direct data sources are developed, FHWA may consider revising this measure.

k. How long would it take for transportation agencies to implement such a measure?

Several commenters, including the State DOTs of California, Colorado, Delaware, Minnesota, Oregon, Pennsylvania, Virginia, Vermont, and Washington, suggested that transportation agencies could implement a fuel-based GHG measure in 1 to 2 years and that a VMT-based measure would take 3 to 5 years.

The FHWA has chosen a fuel-based measure that can be implemented within the 1- to 2-year time frame cited by commenters. This is consistent with the timeframes established in this rule (first performance period starts on January 1, 2018, and targets are due in October 2018).

1. The FHWA Requests Data About the Potential Agency Implementation Costs and Public Benefits Associated With Establishing a CO₂ Emissions Measure

Some commenters noted that a fuel-based measure would have minimal implementation costs, but that a VMT-based measure would require transportation agencies to dedicate staff to the effort and incur new ongoing costs. Commenters noted that the benefits of the rule would depend on the ambition of State DOTs and MPOs in setting targets and implementing strategies.

The FHWA appreciates the responses submitted on this question and has considered these comments in preparing the rule. Please see the regulatory impact analysis for detailed information on economic costs.

2. Removal of Peak Hour Travel Time Reliability Measure

Several commenters expressed concern that the proposed measures based on vehicle travel times are redundant and overly burdensome. Some suggested reducing the number of measures that rely on travel time in order to reduce the burden on transportation agencies, arguing that having seven metrics based on travel time data is redundant and provides little additional benefit. There were commenters in favor of removing the LOTTR, PHTTR, TTTR, freight congestion, and Excessive Delay measures, respectively. Several commenters suggested replacing the PHTTR measure with the Excessive Delay measure and vice versa.

The measures proposed in the NPRM represented different aspects, but similar types, of performance. The FHWA based the proposed measures on the availability of existing data and feedback from stakeholder sessions early in the rulemaking process. After reviewing the comments, FHWA agreed that the number of measures should be reduced to minimize the burden to analyze data and establish targets and to simplify the method to determine metrics and measures. In this final rule, FHWA has reduced the number of measures that rely on travel time from seven to four. The four measures will be used to assess reliability (both for all vehicles and trucks) and delay experienced by all travelers during peak hours.

Commenters were most critical of the PHTTR measure. Many questioned the usefulness of this measure and raised concerns about the many aspects of the measure. Commenters also discussed the similarities between the PHTTR and Excessive Delay measures, which many felt created an unnecessary complication and added burden. In response to these comments, FHWA consolidated the proposed NHPP PHTTR measures and the CMAQ Excessive Delay measure into one measure under the CMAQ program: Peak Hour Excessive Delay (PHED). Discussion of these changes to the Excessive Delay measure can be found in the Response to Comments Section for subpart G. The rule now weights all but one of the four travel time derived measures (*i.e.*, truck reliability) to reflect the impact of performance on all travelers. Reducing the number of travel time derived measures will still allow for the assessment of reliability and congestion at the State, urbanized area, and national levels.

3. NHPP Reliability

a. Reliability—Use of Traffic Volumes Versus People Traveling

Many commenters supported using volume data to weight the LOTTR measure. The NACTO suggested modifying the LOTTR to include transit movement weighted by ridership. The Oregon Metro Council and the Joint Policy Advisory Committee on Transportation suggested including hourly volumes (the same used for the proposed CMAQ Traffic Congestion delay measure) in the calculation for LOTTR. The NJTPA also suggested volumes for LOTTR modifications and proposed using occupancy estimates to weight by person volumes, not just vehicle volumes. Many commenters felt that the proposed measures were too

focused on vehicle delay and wrongly ignore person throughput. The Washington State House of Representatives commented that congestion should be measured on reliability, or whether or not a trip takes the same amount of time from day to day, rather than delay. Focusing on driver delays creates a one dimensional vision of congestion and ignores alternative modes of transportation that people use to travel through a corridor, and reliability would be a better measure to ensure that people can count on a consistent commute day to day, no matter what mode of transportation they use.

Commenters also stated that the NPRM required traffic volumes to be used in the calculation of the CMAQ Excessive Delay measure, but not the NHPP Reliability Measure. The NJTPA states the incorporation of person and goods volumes in the reliability and delay metrics would improve their perspective. The FHWA agrees with these comments and believes that the NHPP Reliability measures would be improved by weighting the metrics with volumes. This change will put a greater emphasis on roadway segments where reliability deficiencies are impacting the greatest number of people using the system. The final rule requires the measure to be weighted by annual traffic volumes, which puts the focus on the most heavily travelled roads.

In the NPRM, FHWA was concerned about the absence of data regarding actual traffic volumes for the level of roadway coverage and granularity needed (entire NHS and 5-minute temporal granularity). The FHWA believed including volume would require actual volume counts every 5 minutes for every NHS road segment, data which do not currently exist. In the final rule, FHWA has decided to use annual average daily traffic (AADT) to weight segments in the calculation of the measure, rather than use them in the metric calculation, the approach rejected in the NPRM. The FHWA maintained that the CMAQ Excessive Delay measure (new Peak Hour Excessive Delay), which applies to fewer entities, apply hourly traffic volumes for each segment.

To account for the movement of people rather than just vehicles in these measures, the measure will also be weighted by area wide/statewide occupancy factors. The FHWA will develop occupancy factors for both metropolitan and statewide areas based on national survey results, such as NHTS. Using both traffic volume and occupancy factors as weights in the calculation of the reliability measure

will allow the measure to reflect the percentage of all people experiencing reliable conditions. The measure will be more sensitive to congestion in areas where there are more person-miles traveled, which FHWA believes is an appropriate way to measure reliability for investment decisionmaking. In addition, in recognition of the evolving ability to accurately measure person throughput and the impact of multimodal travel, FHWA plans to revisit the measures related to reliability and congestion after Fall 2018 when FHWA's multimodal research study is expected to be completed.

b. Applicability of the Non-Interstate NHS NHPP Reliability Measure

The FHWA received several comments regarding the applicability of the NHPP non-Interstate NHS reliability measure, including restricting the measure to urbanized areas or to areas with populations of at least 1 million. These commenters argued that narrower applicability would reduce the cost and burden of data analysis on smaller, rural States.

The Oregon Metro Council and the Joint Policy Advisory Committee on Transportation commented that FHWA should apply the travel time reliability measures to the entire NHS.

The FHWA acknowledges that rural roadways may only have limited reliability issues, but such problems can and do occur as a result of weather events, special events, tourist attractions, etc. The FHWA believes it is important to understand when and where reliability problems on both urban and rural segments of the non-Interstate NHS occur. The FHWA analyzed the burden on State DOTs and MPOs with rural and urban NHS networks and found that the level of change needed to justify the cost of compliance is achievable. The FHWA is committed to provide technical assistance and support to State DOTs. In addition, FHWA is interested in working with State DOTs and MPOs to lead a pooled fund effort to acquire resources to provide services and tools to minimize the resource demands to process and analyze data.

c. Excluding Weekends From LOTTR Calculations

Several commenters questioned the inclusion or exclusion of weekends in the LOTTR measure, arguing that exclusion of certain days should be consistent across all travel time-based measures. The Delaware DOT commented that in resort areas, Fridays should be considered weekends and

should not be included in LOTTR calculations.

The FHWA evaluated the impact of including weekends in the calculation of the reliability metric, finding that for Interstate roadways, the maximum LOTTR value typically occurred during the weekday or was similar during both weekdays and weekends. However, for non-Interstate NHS roadways, including weekend travel times resulted in reliability measures that were 5 percent to 7 percent worse than measures derived solely from weekday travel times. These data indicate that weekend travel impacts reliability for a sufficient portion of the system to warrant the inclusion of weekends in the metric calculation. System performance should be assessed during times of most use of the NHS system, which in many cases includes the weekend daytime periods. In many urban areas and areas with special events, there can be reliability issues even on the weekends. Including weekends will allow DOTs and MPOs to more fully monitor segments with reliability issues and monitor how they change year-to-year.

d. Time Periods for LOTTR Calculation

The FHWA received eight comments on the use of shorter time periods for the LOTTR calculation (e.g., individual hours rather than 6 a.m. to 10 a.m.). The AASHTO and others noted that the time period proposed in the NPRM highlights inconsistency in travel times within the time period bins rather than from day to day. This methodology could lead to segments reported as unreliable according to the LOTTR measure, while they may be considered reliable when using trip based reliability. The NYSAMPO noted that the longer peak periods mask the occurrence of reliability problems. The New Jersey DOT and NJTPA stated that the large time periods for analysis would be appropriate if people could shift their commute times within the period, but since most people cannot, the time periods are too long. The Southeast Michigan Council of Governments requested flexibility to report the highest values for each individual hour within the peak periods rather than a ratio accounting for all 4 hours. The Oregon Metro Council proposed a formula-based method to determine each agency's time periods to avoid mixing peak and off-peak travel time observations in the denominators of key metrics, which would obscure cross-regional comparison.

The FHWA recognizes that there are many approaches to measuring reliability and related congestion measures. The FHWA carried out a

number of analysis runs using travel time data for a mix of States and urbanized areas to evaluate the impact of reducing the number of time periods below the four that were proposed and shortening the duration of time periods to eliminate the "tails" where traffic tends to build up and reduce. The results from these runs showed that a sufficient number of roadway segments exhibited unreliable travel times during the midday and weekend time periods. In addition, FHWA found that shortening the time periods (to reduce "tails") resulted in similar outcomes as compared to the proposed time periods (less than 1 percent difference). The FHWA retained the four proposed time periods (AM peak, midday, PM peak, and weekend) and the duration of each time period. In this final rule, the 14 hours are broken down into four time periods: (1) Weekday mornings (6 a.m. to 10 a.m.); (2) weekday afternoons (4 p.m. to 8 p.m.); (3) midday (10 a.m. to 4 p.m.); and (4) weekends (6 a.m. to 8 p.m.). The FHWA believes that evaluating the hours when the system is most frequently in use, defined as 6 a.m. to 8 p.m. daily, is the best approach to assess reliability problems. The FHWA analyzed suggestions from commenters that showed there are reliability problems on certain sections of roadways during all of those time periods (with more occurring during peak periods). The FHWA also assessed if the longer time blocks (4 to 14 hours) proposed in the NPRM measured variability across the time period instead of variability from day-to-day at the time period throughout the year. Commenters were concerned that the variability in travel times at the "tails" of the longer time periods would control the reliability metric. The FHWA found no significant difference (results within 1 percent) between using the proposed time blocks to using 1-hour time blocks over the same time period (i.e., comparing one block of 6:00 a.m. to 10:00 a.m. to 4 time blocks each 1 hour in length from 6:00 a.m. to 10:00 a.m.). For this reason, FHWA decided to maintain the time blocks proposed in the NPRM in the final rule.

e. Use of 1.50 Threshold To Determine Reliable Segments

Several commenters expressed a desire to establish different thresholds for urban and rural roadways and based on segment length. These commenters explained that travelers tend to view the reliability of their travel based on a full trip and not the individual short segments that make up the trip. They suggested that the final rule include different thresholds for different TMC

lengths, since they could vary by more than 10 miles in length.

The NJTPA, TRANSCOM, AMPO and others expressed concern about the use of pass/fail threshold noting that incremental improvements in reliability would not be recognized until the LOTTR dropped below 1.50. These commenters argued that the use of a “sharp” cutoff threshold could bias investment decisions, encouraging State DOTs and MPOs to focus only on those segments that are close to the 1.50 threshold, even though optimal improvement may be on segments with much higher LOTTR values.

The FHWA appreciates and acknowledges these comments and considered alternative approaches to the proposed method. The FHWA ultimately elected to retain the approach to utilize a 1.50 threshold to reduce complexity in the calculation method. An alternative approach would have required varying threshold levels for different segments and the inclusion of more graduated levels of reliability, which FHWA felt would unnecessarily complicate the measure calculation and reporting process. The FHWA encourages State DOTs to discuss how investment strategies have resulted in incremental improvements to the reliability of the system in their Biennial Performance Report. In addition, FHWA has revised the Truck Reliability measure so that it is a weighted average of all segment level reliability ratios that will reflect all changes in reliability levels.

D. Subpart F—National Performance Management Measures for Freight Movement on the Interstate

1. Removal of Truck Congestion Measure

In the NPRM, FHWA proposed two measures of freight movement on the Interstate under 23 U.S.C. 150(c)(6): Truck Travel Time Reliability (TTTR) and Truck Congestion. Many commenters felt that the 50 mph speed threshold to define congestion for the Percent of the Interstate System Mileage Uncongested proposed in the NPRM is unreasonable and should be eliminated. Suggestions included:

- Making the threshold more flexible for each reporting entity
- Using some other variable such as population density
- Changing to a lower value such as 35 mph
- Changing to a percentage of the posted speed limit
- Making the threshold a function of population density, lanes, or ADT
- Rather than using thresholds, providing credit for incremental improvements.

The FHWA eliminated the performance measure for Percent of the Interstate System Mileage Uncongested; the TTTR Index is the only freight-specific performance measure adopted in this rule. The FHWA recognizes that the use of a single speed threshold as compared to an annual average of speed would not be an effective measure to assess uncongested conditions. Changing the measure to consider the factors expressed through comments would be complicated and overly burdensome to implement.

2. Consistency Between All-Vehicle and Freight Reliability Measures

Many commenters provided suggestions to better align the proposed reliability measure for the NHPP that reflects the travel of all vehicles and the proposed freight reliability measure that reflects the travel of trucks. The suggestions raised by commenters are discussed below and, in general, addressed a desire to: Remove the freight reliability measure, better align time periods with the two reliability measures, reconsider the longest travel time considered in the metric, and reconsider the threshold to define reliable travel time.

Many State DOTs and MPOs commented that all-vehicle and freight reliability measures should be consistent since trucks and cars are travelling on the same roads and improving reliability on a roadway benefits all vehicle types. Commenters noted that the NPRM uses data from the all vehicle travel time dataset to complete missing truck data in NPMRDS. Several State DOTs and MPOs also commented that separate measures created a perception that freight was being prioritized over passenger vehicles. Several commenters suggested that the proposed freight performance measures focus on peak period travel times or peak period congestion, with some suggesting focusing on corridors or bottlenecks and aggregating the data into 15-minute intervals and longer segments. If the intent is to show the off-peak freight flows, then FHWA should provide further guidance or focus the measure only on off-peak periods. If this is not the intent then there should not be two separate reliability measures. In addition, some commenters suggested that the measure evaluate peak seasonal performance rather than annual averages for freight facilities serving agricultural regions. Other commenters suggested that the final rule consider the use of peak periods and adding a fifth time period from 8 p.m.–6 a.m. daily. As with the LOTTR, commenters suggested

that the TTTR measure be computed separately for each single hour within the proposed time period and the measure should be the hour with the lowest percent reliable for the time period of interest.

The AASHTO and several State DOTs and MPOs commented that they do not agree with using the 95th percentile travel time for freight. Many questioned the justification for use of the 95th percentile, with some noting that it is too stringent. In response, some commenters, including AASHTO, AMPO, TRANSCOM, and several State DOTs suggested using the 80th percentile to be consistent with the LOTTR measure for all vehicles. The NARC and others suggested allowing State DOTs and MPOs flexibility to set the threshold. Other commenters did not specify the percentile, but requested that the percentile chosen be consistent with the all vehicles measure or that FHWA provide a rationale for why the thresholds are different. The AASHTO, along with Washington, Oregon, and Connecticut DOTs and Nebraska Department of Roads agreed with using the 50th percentile travel time as the normal truck travel time for the reliability measure. The FHWA considered commenters' suggestions, and in particular, FHWA assessed the need for separate:

- Travel times—all vehicles and trucks;
- time periods—6 a.m. to 8 p.m. and 24 hours a day; and
- percentile to represent the longest travel times—80th, 95th, or other percentile.

In addition, FHWA considered the utility of using a 1.50 threshold as an indicator of reliable travel time performance, an issue that was raised for both freight and all vehicle measures.

As a result of this assessment, FHWA concluded that a separate reliability measure is needed to assess freight movement on the Interstate, but revised the measure to address comments about the 1.50 threshold and periods of analysis. A separate freight reliability measure will more accurately reflect the performance of the Interstate system as perceived by shippers and suppliers as the measure considers factors that are unique to this industry such as the use of the system during all hours of the day and the need to consider more extreme impacts to the system in planning for on-time arrivals. The FHWA believes that these changes simplify the calculation and addresses the concerns regarding the higher standard of performance proposed for truck reliability.

In addition to the data requirement changes discussed previously (*i.e.*, the use of 15 minute time periods and longer allowable segment lengths), FHWA simplified the truck reliability calculation by simplifying the method to utilize all-vehicle travel times when truck travel times are missing and using consistent time periods to those used for the all vehicle reliability measure. The FHWA retained the requirement to use truck travel times as the basis for the metric calculation to more accurately depict how freight is moving on the Interstate system as FHWA has consistently found the truck travel times to be slower than all vehicle travel times in the NPMRDS data set. The FHWA revised the truck reliability measure to use 5 time periods, 4 of which are used in the all vehicle reliability measure. These time periods cover 24-hours, broken into AM peak (6 a.m. to 10 a.m.), mid-day (10 a.m. to 4 p.m.), and PM peak (4 p.m. to 8 p.m.) periods for Mondays through Fridays, weekends (6 a.m. to 8 p.m.), and overnights for all days (8 p.m. to 6 a.m.). Aligning the time periods to the all vehicle time periods simplifies the analysis. Including all times recognizes the flow of freight during all hours of the day and also considers freight shippers that attempt to plan routes that optimize travel time and, when possible, attempt to avoid peak hours in major congested areas. The FHWA believes that the 5th time period is needed to consider travel times during overnight hours as shippers and suppliers rely on the system to support on time delivery needs 24-hours a day.

In response to comments, FHWA compared metric and measure results using the 80th percentile and the 95th percentile travel times. This analysis showed minimal differences in the reliability measure for the Interstate System using the 80th and 95th percentiles; however, metric results were considerably different at the roadway segment level. The FHWA believes that the 95th percentile travel time needs to be considered in the freight measure to account for the events that could impact on time delivery as shippers, carriers, and receivers desire on-time/just-in-time delivery of goods and plan their trips by building in enough time to meet delivery requirements. For these reasons, FHWA elected to maintain the 95th percentile in the truck reliability calculation.

The FHWA appreciates the concerns raised by commenters regarding the different standard used for freight and all vehicles measure and agree that, as proposed, this difference would put a priority on the freight metric in

decisionmaking. To address this concern, FHWA removed the 1.50 reliability threshold. As in the NPRM State DOTs will still report a reliability ratio (comparison of the 95th and 50th percentile travel times) for individual segments of roadway. However, as a result of the removal of the 1.50 threshold, FHWA will not assess if the roadway segment (as expressed by the reliability ratio) is providing for “reliable” travel times. The new measure is designed to use the reliability ratio of each segment, using the worst reliability ratio of all 5 time periods, to calculate an overall average truck reliability of the entire Interstate system. The Interstate system will be represented with one reliability ratio for trucks that will be used by State DOTs and MPOs to establish targets. State DOTs and MPOs will use the roadway segment level reliability ratios, considering the time periods where reliability problems are exhibited, to identify strategies that can be implemented to improve the overall reliability ratio for the Interstate system. The new measure can be used as an indicator of the travel time variability considered by shippers and suppliers. The change also allows for incremental improvements to be recognized in the measure outcome, which was a concern raised by many commenters in the design of the proposed reliability measures.

3. Relationship Between the Freight Measure Provisions and the National Freight Program and State Freight Planning

The California Association of Councils of Government requested that the rulemaking clarify the relationship between the freight measures and the FAST Act rulemaking on Interim National Multimodal Freight Network, particularly with regard to FAST Act freight funding programs, including FASTLANE.

The Connecticut and Texas DOTs noted that the rule does not outline how the proposed critical urban and critical rural freight corridors, required to be developed under FAST Act, will be integrated into the NPMRDS dataset. There is concern that this integration will require substantial effort and resources by State DOTs.

The Nebraska and Texas State DOTs commented that there is no need to establish additional reporting requirements for freight bottlenecks because bottlenecks and performance measures will be addressed in the State’s freight plan required in 49 U.S.C. 70202 and thus a separate report seems redundant. The Texas DOT suggested

that reporting on multimodal bottlenecks can be done by including a section in a State freight plan.

The FHWA recognizes that the FAST Act made a number of substantive changes in the freight area, including establishing two new funding programs. These new programs did not change the requirement under 23 U.S.C. 150(c) to assess freight movement on the Interstate System. One of the new funding programs is the National Highway Freight Program to improve the efficient movement of freight on the National Highway Freight Network (NHFN). The statute requires FHWA to establish the NHFN, which consists of the following components: The Primary Highway Freight System (PHFS), Critical Rural Freight Corridors (CRFC), Critical Urban Freight Corridors (CUFC), and those portions of the Interstate System that are not part of the PHFS. Therefore, the NHFN includes the entirety of the Interstate system—the same system used to assess freight movement in this rule. Although NHFP funding eligibility is limited to projects on the PHFS, CRFC, and CUFC (which may not include the full Interstate System in a State), FHWA does not believe that this should limit the applicability of the measure in the rule to assess freight movement. Other program funding, such as the National Highway Performance Program, may be used for projects to improve both freight performance on the entire Interstate System.

The NPMRDS includes travel times for the full Interstate System. State DOTs and MPOs will have the data they need in the NPMRDS to meet the freight measure requirements in this rule. There is no requirement for State DOTs and MPOs to supplement the NPMRDS with travel time data to represent roadways on the NHFN that are not on the Interstate System.

The performance management statute requires State DOTs to biennially submit performance reports (*i.e.*, State Biennial Performance Reports in § 490.107) that include freight bottleneck analyses. A good source for these analyses is the State freight plan under 49 U.S.C. 70202, which is required by the FAST Act in order to obligate NHFP funding after December 4, 2017. There can be coordination between the bottleneck reporting for performance measures and freight plans; however, the timing for the State Biennial Performance Reports and 5-year updates to State freight plan is different. In recognition of this similar requirements, FHWA will allow State DOTs to refer to the State freight plan bottleneck analysis in their State Freight

Plan to meet the freight bottleneck reporting requirements of 23 U.S.C. 150(e) if the freight plan has been updated since the previous State Biennial Performance Report.

4. Weighting by Truck Volume

The Virginia and Minnesota DOTs, Oregon Metro Council, Metropolitan Council, and the Joint Policy Advisory Committee on Transportation recommended weighting the reliability measures by applicable vehicle volumes. The Oregon Metro Council and Joint Policy Advisory Committee on Transportation also provided details in their comment on how to weight the reliability measure by volume and recommended FHWA support and fund a better means of obtaining vehicle classification volume data.

The AASHTO and several State DOTs opposed weighting the measures by truck volumes, because it would create additional work to calculate the measure.

The FHWA considered the comments suggesting that the freight reliability measure be weighted by truck volumes. Putting a lesser weight on a segment of the Interstate that is avoided by freight shippers due to poor performance would be contrary to the intent for the performance measure.

The reasoning for weighting, as noted by several commenters, is that it would more strongly emphasize sections of roadway that carry higher truck volumes. The FHWA evaluated the impact of weighting by truck volumes and concluded that for the Interstate System, to which this measure only applies, providing for reliable travel times is equally important across the full system, regardless of the level of use by trucks. If the freight performance measure is applied to a range of roadway functional classifications other than the Interstate System, then weighting the measure for truck volume would be more important in determining which roadways serve as major freight routes.

The FHWA further concluded that some shippers monitor the performance of the roadway system and avoid segments of the Interstate when conditions could impact on time delivery. The FHWA's analysis of Interstate corridors showed that, in some cases, areas with poor reliability tended to have lower truck volumes, indicating that the practice of avoiding segments to achieve on time delivery could impact the effectiveness of the measure if it were weighted by truck volumes.

For these reasons, the freight performance measure will not be weighted by truck volumes.

5. Vehicle Classes

The AASHTO and New York State Association of Metropolitan Planning Organizations recommended that FHWA define freight as combination trucks (FHWA classes 8–13). The AASHTO mentioned that this group of vehicles is representative of most significant freight activity on Interstates. The AASHTO also recommended that the NPMRDS only include the data for those classes. The Connecticut DOT recommended that FHWA define freight as combination trucks (FHWA classes 8–13) and require that NPMRDS dataset only include those classes. The Delaware DOT noted that NPMRDS only includes certain classes of trucks and questioned whether this is accurate.

The FHWA concluded the comments do not require a change to the rule. The data set includes a sample of fleet vehicles. A range of trucks is included, but data are more heavily sampled toward Interstate truck traffic, which would include FHWA vehicle classes 8–13. The FHWA will provide additional guidance on what vehicle classes are included in the NPMRDS dataset.

6. Definition of Freight Bottlenecks

Many commenters noted that the 50 mph speed threshold to define congested conditions for freight movement was not an effective indicator of “freight bottleneck.” A freight bottleneck can result from a combination of features, including capacity constraints, highway interchanges, locations with geometric constraints, bridges with clearance or weight limitations, or steep grades. Also, significant bottlenecks to freight movement are often off the Interstate and the NHS, such as arterial streets, intermodal connectors, and first and last miles to freight origins and destinations. The AASHTO and a number of agencies suggested the term “freight bottleneck” be changed to “truck freight bottleneck” for clarification since it only applies to truck traffic, and not to other modes such as rail or waterway.

The definition of “freight bottleneck” has been changed to “truck freight bottleneck” and revised to provide a general description that allows State DOTs to determine where truck freight bottlenecks are occurring based upon individual context. The definition also does not limit the location to the Interstate. Each State DOT will need to define what constitutes bottlenecks based upon the specific context of the State and the local impediments that

each State experiences with regard to freight movement.

E. Subpart G—National Performance Measures for CMAQ Program—Traffic Congestion

1. Excessive Delay Measure

a. Applying Peak Hours to Excessive Delay Measure To Create Peak Hour Excessive Delay

The Response to Comments section for subpart E describes FHWA's rationale for consolidating the PHTTR measure and Excessive Delay measure from the NPRM into a new CMAQ Traffic Congestion measure: Peak Hour Excessive Delay (PHED). The PHED measure applies peak hours to the original Excessive Delay measure in order to focus on traffic congestion experienced during peak hours in applicable urbanized areas. Other aspects of the original Excessive Delay measure were also changed in response to comments, as explain in the following sections.

b. Peak Hour Time Periods

Originally, these comments related to the peak hours defined in the PHTTR measure. The FHWA has included this discussion of peak hour comments under the CMAQ Traffic Congestion section because the peak hour designation now applies to the Excessive Delay measure. The AASHTO requested the inclusion of 9:00 to 10:00 a.m. and the Hampton Roads Transportation Planning Organization requested 3:00 to 4:00 p.m. Other commenters requested that FHWA maintain consistency between the hours used in the LOTTR and PHTTR measure.

The FHWA agrees that consistency in the time periods for all travel time measures would simplify the approach to calculate the measures and reduce the amount of data needed for the calculation of all measures. The FHWA also recognizes that different areas experience peak periods at different times of the day. For this reason, FHWA has adjusted and provided flexibility in defining the time periods for the PHED measure to be more consistent with the reliability measures. The FHWA felt that it was important to keep the time periods within 6 a.m. and 8 p.m. to ensure for consistency in the all of the measures at a national level. The adjustments in the final rule added a 4th hour to both the morning and afternoon peak periods. The morning period has been extended to 10 a.m. and to provide flexibility to State DOTs and MPOs, two options have been provided to expand the afternoon period—starting earlier to

begin at 3 p.m. or extending later to end at 8 p.m.

c. Traffic Volume Profiles

In the NPRM, FHWA required State DOTs and MPOs to develop hourly volumes based on actual vehicle counts or AADT. Several commenters were concerned that traffic volume data may not be accurate at the granularity required in the NPRM and suggested FHWA fund better volume data collection if data collected by State DOTs and others are not adequate.

The commenters also requested more information about developing hourly volume profiles from actual vehicle counts or AADT. Some commenters suggested FHWA take AADT information from each State's HPMS submittal and develop traffic volume profiles by time of day and day of the year at a 5-minute bin level⁶⁵ for each reporting segment or make traffic volumes available in the NPMRDS data set so State DOTs and MPOs could calculate average daily vehicle hours of delay.

The FHWA has reduced the number of hourly volumes that need to be estimated to just the peak hours (*i.e.*, 8 hours daily), requiring only peak hour factors to be used to estimate volumes. The FHWA will provide guidance on appropriate methodologies for estimating the hourly volumes for use in this measure.

d. Person Throughput Versus Vehicle Throughput

The FHWA received thousands of comments in favor of making the PHTR more person-focused. The Southwest Energy Efficiency Project, Conservation Colorado, and the National League of Cities suggested using average vehicle occupancy and transit ridership to measure person-hours of excessive delay. The Virginia DOT suggested that the National Transit Database (NTD) could provide data on transit vehicle/bus occupancy, while default values could be used for vehicle occupancy where no data is available. The COMPASS stated that a road mileage-based measure can be counterproductive and encouraged FHWA to measure impacts in terms of people instead. The AASHTO and the Maryland DOT cited both the National Household Travel Survey (NHTS) data as a good representation of actual vehicle occupancy and the Census Transportation Planning Products program that develops robust work-

based trip data. With these data sources, the highway delay metric could be normalized by the number of workers commuting by car.

As with the NHPP reliability measures, FHWA agrees with these comments and believes that the PHED measure would be improved if it represents the cumulative delay of all people using the NHS and not just the delay experienced by vehicles. The FHWA believes that this approach will encourage the improvement of corridors that have higher person throughput. For this reason, the PHED metric in the final rule requires the use of average vehicle occupancy (AVO) factors for cars, buses, and trucks and hourly traffic volumes to calculate person-hours of excessive delay. The FHWA recognizes the variations in AVO among and within urbanized areas and the challenges in obtaining segment-level AVOs. Therefore, to support this approach, FHWA will establish AVO factors for State DOTs and MPOs to use for each applicable urbanized area using the National Transit Database for buses and national surveys, such as the American Community Survey, for cars. The FHWA also recognizes that urbanized areas may have more specific AVO data, and the final rule provides flexibility for State DOTs and MPOs to substitute these data.

e. Thresholds

The FHWA received many comments disagreeing with the selection of the 35 mph threshold for freeways and 15 mph threshold for other NHS roadways. Commenters noted that these thresholds do not adequately reflect different circumstances across the country and, in particular, urban areas. Additionally, AASHTO and the Connecticut and Washington DOTs warned that States may have an incentive to focus a project on a reporting segment that is just slightly over the set thresholds instead of the areas that need it the most in order to impact the final number of hours of excessive delay.

Commenters were also concerned that information about the Functional Class of each segment may not be available in HPMS or NPMRDS, and that this could make assigning speed thresholds to different roads challenging. Commenters requested various changes, including using 50 or 60 percent of the posted speed limit (PSL) and leaving the speed threshold to be set by the State DOTs or MPOs.

The FHWA agrees that the use of absolute thresholds may not be appropriate for all areas and that it would be more appropriate to use a threshold based PSL provided this

threshold does not exclude speeds that have been demonstrated to generate emissions that adversely impact air quality. The Washington State DOT conducted analysis on the optimal travel speed to maximize throughput for its State highways and determined that the optimal flow speed was roughly 70–85 percent of PSL. Speeds in this range would have optimal spacing between vehicles while speeds less than 70 percent of the posted speed limit are considered congestion. Speeds less than 60 percent of the posted speed limit are considered to be severe congestion by Washington State DOT. Additionally, FHWA found in previous analysis that emissions rates in grams per mile for criteria pollutants are typically higher at lower speeds (*i.e.*, 0–20 mph).⁶⁶ The FHWA believes that a 20 mph speed threshold connects traffic congestion to criteria pollutants. At speeds higher than 20 mph, emissions are significantly lower.

As a result, FHWA has revised the excessive delay threshold in the final rule to be 60 percent of PSL, with a minimum limit of 20 mph. The 60 percent of PSL threshold was selected based on comment suggestions, and the limit of 20 mph was selected based on speed levels that have been associated with emission impacts on air quality. This speed threshold applies to all Functional Classes of roadways, removing the need to identify the Functional Class of each segment. The FHWA recognizes that PSLs are not provided in the NPMRDS dataset. The FHWA will make provisions within the HPMS to capture PSL as a field that can be populated for the full extent of the NHS. The FHWA encourages State DOTs to report PSLs for all NHS segments in the HPMS. The FHWA believes it is important for State DOTs and MPOs to collect and report posted speed limit to understand operating expectations of the NHS.

f. Use of Population for Normalization

The AASHTO and several State DOTs expressed concern over the per capita denominator in the Excessive Delay Per Capita measure, stating that it inaccurately assigns excessive delay to all people in all urbanized areas, rather than just the highway drivers who are impacted. The commenters further argued that urbanized areas with high levels of Interstate through traffic will have misleadingly high values because the delay is being experienced by

⁶⁵ The FHWA has changed the time bins to 15 minutes for the final rule, but the comments reflected the 5 minute bins proposed in the NPRM.

⁶⁶ ICF for FHWA, *Multi-Pollutant Emissions Benefits of Transportation Strategies*, 2006. https://www.fhwa.dot.gov/environment/air_quality/conformity/research/mpeb.pdf.

travelers from outside the urbanized area. The commenters suggested that the measure be normalized by commuters using a personal vehicle on the roadway network. Furthermore, the Connecticut and Texas DOTs, and AASHTO commented that the proposed excessive delay measure would produce misleading measure trends when using incomplete data and when no imputation is used. The AASHTO and WSDOT recommended that FHWA divide annual excessive delay by the estimated commuter population rather than overall population to get a more realistic idea of how the people experiencing the delay are affected.

The Atlanta Regional Commission suggested that the congestion measure should be scaled on observed or estimated travel demand (*e.g.*, peak period person throughput, number of peak period trips, peak period VMT). The travel demand also could be gauged in multiple levels: NHS travel demand only, total vehicle travel demand (beyond the NHS), or even total travel demand (*e.g.*, number of peak period trips occurring across all modes). The commenter recommended that HPMS data on annual VMT by functional class could be used. The Delaware DOT urged that FHWA use an estimate of how far people travel to work, while the Delaware Valley Regional Planning Commission recommended that the annual hours of excessive delay per capita should not be based upon total population, but rather should be limited to commuters using a personal vehicle on the NHS roadway network during the time periods it is being measured (*i.e.*, morning and evening peak periods). The Georgia DOT suggested FHWA use Annual Hours of Excessive Delay per thousands or millions.

In response, FHWA compared different methods to normalize the measure in areas that rely heavily on highways and others that provide several modes of transportation. The FHWA found that population was as effective as other methods to normalize the measure and found that, in areas where travelers tend to use non-highway transportation modes, the measure did not unfairly bias the outcome in the area's favor. In addition, population data are readily available in national data sources. For these reasons, FHWA retained the use of population in the final rule to normalize the measure. The FHWA feels that other approaches to normalize the measure would add unnecessary complication to the method. The FHWA plans to revisit this measure after the completion of its multimodal research study in Fall 2018.

g. Census Annual Population Estimates in Lieu of Decennial Values

Several commenters commented on the proposed methodology for the traffic congestion performance measure, which uses the population in the area to develop a "per capita" estimate. The Illinois DOT claimed that using the per capita denominator for the Total Excessive Delay per Capita overestimates the users of the NHS System. The North Jersey Transportation Planning Authority recommended using the most recent population estimate for the urbanized area instead of the decennial values. The Texas DOT stated that using the most recent U.S. Decennial Census (*i.e.*, 2010 population numbers that are already 6 years old) for reporting until 2022 or 2023 when the 2020 Census is available will have a negative impact on the urbanized areas of Texas with regard to "per capita" metrics.

The T4A requested discussion in the final rule of how State DOTs and MPOs could use population estimates from 5-year ACS estimates for each-year reporting cycles. The commenter also stated the importance of normalizing the excessive delay measure by dividing the calculation by the total population for the State or MPO, allowing all transportation users to be accounted.

The FHWA agrees with the use of annual population estimates as opposed to the decennial census populations to normalize the excessive delay measure. Using annual estimates will more accurately account for population shifts in large urban areas that are not captured through the decennial census. For this reason, FHWA has revised the approach to determining the population in the final rule for both the PHED per capita measure and to determine urbanized areas that are applicable to the CMAQ Traffic Congestion measures (both PHED and non-SOV Travel). As suggested in the comments, FHWA is requiring annual population estimates to be determined using U.S. Census estimates (*i.e.*, most recent ACS 5-year estimate). The most recent annual population estimate as of one year before the Baseline Performance Report is due is to be used to determine urbanized areas that are applicable to the CMAQ Traffic Congestion PHED measure. These areas will remain applicable for the full duration of the performance period, regardless of population changes that may occur within the period (4-year time period). The FHWA feels that keeping the applicable areas for the duration of the performance period is important to simplify the implementation of the

requirements. The most recent annual population estimate will be used each time the PHED per capita measure is calculated. The FHWA believes that this approach responds to the concerns regarding population shifts in large areas.

The FHWA does not agree that the populations should be determined for specific times of the day or days of the week as suggested by some commenters due to the complexity of implementing such a method.

h. Outliers in Speed Data

The Oregon and Washington State DOTs commented that since the null and outlier procedure for the excessive delay measure was not the same as the system performance or freight measures, they assumed that for the excessive delay measure, 5-minute bins with no recorded travel times as well as those data points over 300 seconds will be excluded. The State DOTs recommended that the procedures for all outlier and null data be consistent in the final rule. The AASHTO expressed concern over the excessive delay calculation, which is compounded by outliers in the dataset. The AASHTO argued that the proposed descriptions of equations can create the opportunity for unstable calculations; that is, that the delay may be grossly overestimated on the interplay of the length of each segment, the evaluation period, and the speeds. This could lead to overestimates of delay during periods of very low speeds or road closures if volume limiting is not used. The AASHTO stated that this instability can be addressed with maximums of delay that relate to the length of reporting period. The AASHTO further stated that the outliers in NPMRDS further compound this issue; however, a gapless or imputed data set would not be immune to the volume problems.

The FHWA evaluated the impact of applying an outlier threshold to the final travel time derived measures and found that the effect of excluding very slow and very fast speeds on the outcome measures did not warrant the burden that would be required to remove outliers. Although the removal of outliers had the greatest effect on the excessive delay measure (as this measure cumulates all excessive travel times), the use of allowable techniques, such as path processing, to smooth out point probe sources will reduce the occurrence of outliers in the data set. For this reason, FHWA removed the requirement to exclude outliers from the travel time data set.

In the NPRM, FHWA limited the travel time for a given segment to 300

seconds, equivalent to 5 minutes. This ensured that excessive delay could not exceed the length of the time period. Since 15 minute bins are now used instead of 5 minute bins, FHWA changed this maximum to 900 seconds. Since there is no outlier removal, all 15 minute bins with travel times will be used and subject to the 900 second limitation. The FHWA encourages State DOTs and MPOs to share their strategies using volume limiting techniques to address concerns when extremely slow speeds exist. The FHWA in the final rule allows removal of any travel time data in the calculation that could have been recorded with the roadway was closed.

2. Decision To Include a Multimodal Measure

Tens of thousands of commenters, through campaigns from T4A, American Heart Association, and others, raised concerns about the vehicle-focused nature of the 8 measures proposed in the NPRM. Many asserted that determining the performance of the NHS and the impact of congestion relies on an understanding of the entire surface transportation system, including all available modes of travel. Commenters explained that considering pedestrians, bicyclists, public transit riders, and other travelers in transportation decisions, provides a fuller picture of system performance, encourages policies that reduce traffic congestion, and helps meet the goal of efficient investment of Federal transportation funds. They asserted that these transportation modes, while often local in implementation and reach, deserve recognition in a national performance measure because they contribute to transportation efficiency and reliability, promote public safety and health, improve the livability and walkability of urban neighborhoods, improve environmental sustainability, and reduce costs for the travelling public. One commenter noted that the vehicle-focused approach in the NPRM disadvantages low-income communities where vehicle ownership rates are often lower compared to suburban and rural areas.

Commenters discussed multimodal benefits generally, but also specifically in the context of traffic congestion. Many argued that non-SOV modes should be explicitly included in a measure to reflect emissions avoided by these modes. Commenters suggested making the NHPP Reliability and CMAQ Excessive Delay measures more multimodal by including buses in average vehicle occupancy. Many commenters expressed support for a

new, separate multimodal congestion performance measure. Many commenters provided suggestions for the design of such a multimodal measure, including:

- Non-single occupancy vehicle mode share
- Percent of NHS mileage with a transit alternative to driving
- Ratio of transit passenger miles traveled to vehicle miles travelled
- Shorter multimodal journey-to-work travel time than average
- Number of jobs accessible within a given time budget
- Avoided delay provided by public transportation

Commenters suggested many possible data sources that could be used to calculate a measure, including the American Community Survey (ACS), National Household Travel Survey (NHTS), National Transit Database (NTD), General Transit Feed Specification (GTFS), regional vehicle capacity, and pedestrian and bicycle counts (e.g., from the Travel Monitoring Analysis System (TMAS)). One commenter identified planning tools State DOTs could use to determine the impact of multimodal transportation, including the TDM Effectiveness Evaluation Model (TEEM), TDM Assessment Procedure (TDMAP), Trip Reduction Impacts of Mobility Management Strategies (TRIMMSTM), and Project Evaluation Toolkit (PEToolkit). Commenters suggested FHWA leverage existing datasets and data collection efforts and work with partners such as the Transportation Research Board, the U.S. Census Bureau, and FTA to enhance existing datasets or develop a multimodal dataset.

In the NPRM, FHWA noted the data limitations that constrain creating and requiring a multimodal performance measure and presented specific questions to better understand what could be implemented in this final rule. A number of the measures suggested by commenters still present significant challenges in national data collection and analysis. The FHWA recognizes that robust multi-modal system performance measurement requires additional research and development, and is engaged in a significant research project, Multimodal System Performance Measure Research and Application, to identify more ideal multi-modal system performance measure(s) and the data required to calculate them. However, commenters also provided more information to FHWA to better understand how some State DOTs and MPOs may have other data available to measure modal share more accurately at

a local level. The FHWA now believes that nationally consistent data, as well as these more detailed local sources, make it possible to create a basic assessment of multimodal system performance through the measure of the portion of non-SOV travel. A more detailed discussion of the data elements of this measure is available in the next section. The FHWA will revisit the measures related to multimodal travel following the completion of its research study in the Fall of 2018.

After reviewing these comments, FHWA has decided to include a new multimodal measure, the portion of non-SOV travel, as a CMAQ Traffic Congestion measure. The FHWA believes non-vehicular modes play an important role in reducing levels of criteria pollutants in urbanized areas, and because transportation in urbanized areas is inherently multimodal, it is important to account as much as possible for the options that are available to travelers in those urbanized areas. This measure will help carry out the CMAQ program, as the program recognizes investments that increase multimodal solutions and vehicle occupancy levels as strategies to reduce both criteria pollutant emissions and congestion. The measure adopted in this rule is the percent of non-SOV travel. The measure includes modes that are included in the ACS Journey to Work data, which generally includes all modes that are not SOV and include travel avoided by teleworking.

Based on the comments, FHWA provides three options for State DOTs and MPOs to calculate modal share. The first option is use of the American Community Survey Journey to Work mode share data (updated annually to every 3 years depending on size of urbanized area). These data are nationally consistent, but have limitations in creating a comprehensive picture of multimodal travel. The second option is for State DOTs and MPOs to use locally specific surveys, which may be more accurate than the ACS. The third option is for State DOTs and MPOs to use volume counts for each mode to determine the percent non-SOV travel. While use of the second or third options may result in reporting that is not nationally consistent, FHWA believes that any of these data sources (national or local) can be used to create a meaningful non-SOV mode share measure. Including these options also encourages States and MPOs to develop and use the local measurement methods to help build a more accurate national picture of mode use in the United States.

Non-SOV travel may include travel via carpool, van, public transportation, commuter rail, walking, or bicycling, as well as telecommuting.

The applicability of the CMAQ Modal Share measure is the same as for the CMAQ Peak Hour Excessive Delay measure. The FHWA decided to use the same geographic applicability because FHWA views these two CMAQ Traffic Congestion measures as complimentary, yet different, as both yield important information useful to understanding traffic congestion and the methods available to address it.

3. Data for Multimodal Measure

The Oregon and Washington State DOTs suggested that FHWA use the American Community Survey (ACS) for transit or multimodal-related data. Other commenters suggested using ACS data to gain a baseline of regional average vehicle occupancy and then coupling that with technology-based methods to measure AVO and per-person throughput along roadways. The Oregon Metro Council and the Joint Policy Advisory Committee on Transportation suggested adding journey-to-work mode share data from the ACS as a measure under subpart G to complement the annual per-capita VMT measure. The T4A suggested that FHWA should work with the U.S. Census Bureau to improve the ACS so that it reflects trip purpose and multimodal trips, which work could in turn inform improvements to the NHTS.

Some commenters explained that they do not have robust, reliable data for surface modes other than highways, transit, commuter rail, and passenger rail. In Maryland, for example, these data are available only in the urbanized areas affected by the congestion performance measures. The Delaware Valley Regional Planning Commission stated that FHWA should improve the hourly volume estimation as proposed for the excessive delay measure calculation, because accounting for volumes would be very helpful for project prioritization and would also set the stage for bringing in transit passenger volumes and eventually bicyclist and pedestrian volumes. The Florida DOT described its approach for analysis of volumes from continuous traffic count stations. The New York State DOT cited the challenges of developing hourly traffic volume data for use in the proposed performance measures and noted that their State's program is on a 3-year cycle (as required by HPMS) and not the 2-year cycle described in this rulemaking. The FHWA agrees with the many commenters that suggested using the

ACS data to measure modal share because the data are readily accessible to all potential users and is nationally consistent. The FHWA adopted this approach because it agrees that some State DOTs and MPOs do have the capability today to count different modes of travel. The FHWA also recognizes the limitations of using a survey-based data set and has provided additional options for State DOTs and MPOs to calculate this measure. State DOTs and MPOs are not required to use mode counts, nor are they required to submit them to FHWA. The FHWA acknowledges the importance of a nationally consistent data to compare urbanized areas, but also recognizes that mode count data is an area of ongoing development and could help spur the development of improved measures in the future. The FHWA also believes that increasing the quality and quantity of non-vehicular mode observations is useful in developing a complete perspective on the entire transportation system. As a result, State DOTs and MPOs have the option of using survey-based or count data to calculate this measure. For State DOTs and MPOs that choose to use count data, FHWA encourages but does not require that these data are voluntarily submitted to FHWA via national sources or databases (such as TMAS, NTD, and/or GTFS-RT).

4. Applicability of the CMAQ Traffic Congestion Measures

In the NRPM, FHWA requested comments on whether the CMAQ Traffic Congestion measure should apply to smaller urbanized areas, including those with populations over 200,000. In response, most commenters—including AASHTO, 9 State DOTs, National Association of Regional Councils (NARC), NYSAMPO, and the Association of General Contractors—supported applying the CMAQ Traffic Congestion measures to urbanized areas in nonattainment or maintenance areas with a population of more than 1 million. Some commenters in support of a population threshold of 1 million argued this is consistent with congressional intent to require only those MPOs serving areas with more than 1 million people to prepare a CMAQ performance plan (see 49 U.S.C. 149(1)). They also argue it would limit the burden of compliance to those areas most likely to experience congestion.

Two commenters supported population thresholds below 1 million. The T4A supported a population threshold of 200,000, noting that 23 U.S.C. 149(l) requires a performance plan for mega-regions with more than 1

million people, but does not supersede 23 U.S.C. 150(c). The commenter added that title 23 makes a distinction between areas above and below a population of 200,000, which could be applied to this measure. The Natural Resources Defense Council stated that the restriction on congestion measurement to areas with a population over 1 million is arbitrary and unwarranted and should be removed.

The NARC and NYSAMPO also expressed concern about the applicability of urbanized area as the appropriate geography. The NYSAMPO further expressed concern about the relationship of this requirement to the separate NPRM on MPO Coordination.

The final rule revised the applicability of the CMAQ Traffic Congestion measures to urbanized areas in nonattainment or maintenance areas with a population of more than one million, before expanding to areas with a population over 200,000 for the second and all subsequent performance periods. First, FHWA believes there is public benefit to expanding over time the applicability of the CMAQ measures to additional cities and will help to contribute to achieving the national goal of congestion reduction. The FHWA believes Congress's special emphasis on MPOs located in transportation management areas, which are urbanized areas with over 200,000 in population, is informative in this regard. Congress determined these areas need to address congestion issues, and, under 23 U.S.C. 134(k) Congress has required these MPOs to address congestion management through a process that provides for effective management and operation of new and existing transportation facilities, including development of congestion management plans. The FHWA expects that expanding the applicability of these measures will lead to better planning and operational decisionmaking, especially with respect to congestion management. Applying these measures to this broader group of urbanized areas will contribute valuable information to the congestion management process under 23 U.S.C. 134(k)(3)(A) and is consistent with the DOT Beyond Traffic initiative to address congestion, including in metropolitan areas.

Expanding the applicability of these measures in subsequent performance periods to urbanized areas of 200,000 people or more will yield a larger pool of potential benefits from evaluations of mode share and reductions in peak hour excessive delay as States MPOs and Cities respond to the CMAQ performance measures. Additionally, sharing best practices among a larger

pool of urbanized areas may lead to innovative strategies to reduce peak hour excessive delay and to estimate or count transportation trips on all modes. As part of the Modal Share measure, State DOTs and MPOs are encouraged to report data not currently available in national sources (e.g., pedestrian or bike counts) to FHWA, and expanding the applicability of these measures will improve the quality and quantity of these data nationwide.

Recognizing that these smaller urbanized areas may need more time to implement this requirement because many may not have the same level of experience or resources to consider these issues as do larger urbanized areas, FHWA decided to provide these smaller urbanized areas more time to implement the measure. The phase-in period will give smaller MPOs time to understand the measure, what is necessary to calculate the measure, and how setting targets will work. The phase-in period will reduce the overall burden for State/MPO coordination with respect to target setting for both of the CMAQ Traffic Congestion measures. The PHED measure has also been simplified to require less coordination and less data (i.e., only requiring data during peak hours) than the proposed excessive delay measure in the NPRM. Although the Modal Share measure is new, one option uses widely available ACS data and is simple to calculate.

The FHWA believes that urbanized areas should be the boundary used to define applicable areas, as these areas are used in practice today to define the minimum planning scope of metropolitan areas. The FHWA acknowledges the comment regarding deferring a decision on the area of applicability of these measures until completion of the NPRM on MPO Coordination and Planning Area Reform. The FHWA declines to defer the decision in this rule. This rule provides sufficient lead time to accommodate any coordination or decisionmaking requirements regarding the applicability of the CMAQ PHED measure that may arise out of a final MPO rule.

F. Subpart H—National Performance Measure for the CMAQ Program—On Road Mobile Source Emissions

1. General Comments

Several commenters expressed support for the proposed on-road mobile source emissions performance measure. Other commenters expressed support for FHWA's overall approach of using emission reductions by pollutant for the performance measure for on-road

mobile source emissions. One commenter argued that the nation's transportation system is responsible for roughly 23 percent of the country's emissions and any regulations that require State DOTs to monitor emissions released by automobiles will help reduce emissions drastically, and another recommended that FHWA develop a measure of emissions per person trip for non-freeway NHS roads. Several commenters urged FHWA to incorporate GHG emissions reduction reporting into the on-road mobile source emissions performance measure.

After careful consideration of these comments, FHWA retained the CMAQ on-road mobile source emissions measure, with some modifications as explained in response to specific comments. The FHWA decided after reviewing all the comments regarding a GHG measure to apply it to performance of the NHS in all States and MPOs under NHPP.

2. Concerns About MPO Targets and Reporting

Because the proposed on-road mobile source emissions measure did not include a provision for State DOTs to approve MPO emission reduction targets, the Kentucky Transportation Cabinet expressed concern that the rule would allow an MPO to attempt to force a disproportionate amount of CMAQ funds to be awarded to its area by setting an overly aggressive target and recommended that targets for the on-road mobile source emissions measure should only be required for State DOTs and not MPOs, with a provision for State DOTs to concur with MPO targets. The Oregon DOT suggested that States have flexibility in determining the appropriate target setting entity, whether it is a State DOT or the MPOs.

The FHWA believes that State DOTs and MPOs have the authority to establish their targets at their discretion. Moreover, MAP-21 does not provide FHWA the authority to approve or reject State DOT or MPO established targets. No changes were made in response to these comments.

3. Applicability

Several commenters, including AASHTO and several State DOTs, recommended that FHWA revise the proposed on-road mobile source emissions performance measure so that it only applies to urban areas with populations of over 1 million. The AASHTO expressed concern that smaller urban areas may not have the capacity (resources and staffing) to address the on-road mobile source emissions measure. Further, AASHTO,

Connecticut DOT, and Washington DOT commented that limiting the on-road mobile source emissions measure to urban areas with over 1 million populations would be consistent with congressional intent, because the requirement to prepare a CMAQ performance plan is limited by statute to MPOs serving areas of over 1 million in population. The Washington State DOT and Oregon DOT also reasoned that because smaller urban areas do not receive large amounts of CMAQ funding, those MPOs may use multiple years' allocations to fund a single project, which would result in such MPOs having no reportable benefits for certain years and give a false impression that an MPO failed to meet a target. Further, these commenters expressed concern that setting realistic targets may prove challenging for smaller MPOs that have a limited sample size of past projects. The North Central Texas Council of Governments and several State DOTs recommended that reporting areas be consistent between CMAQ congestion and on-road mobile source emissions performance measures in order to make reporting simpler. Specifically, the State DOTs recommended that the on-road mobile source emissions measure be modified so that it would apply to the same areas as the CMAQ congestion measure in the NPRM, only in urbanized areas with a population of over one million in nonattainment or maintenance areas for criteria pollutants under the CMAQ program. The commenters argued that this approach would allow for consistency with Congress's decision to limit the requirement for the preparation of a CMAQ performance plan to areas of over one million in population.

In contrast, Oregon Metro Council and the Joint Policy Advisory Committee on Transportation urged FHWA to apply the on-road mobile source emissions performance measure to all CMAQ program recipients, regardless of size of population.

Several State DOTs and AASHTO argued that tying emissions reduction to expenditures for apportionments for the entire CMAQ program will result in a negative effect on a State's statutorily given right to utilize flexible funding, which would contradict the purpose of the flexibility provision of 23 U.S.C. 149. As a result, they stated that 490.803 should apply only to non-flexible CMAQ funds. The AASHTO, Connecticut DOT, and Montana DOT urged FHWA not to require emissions data reporting as to flexible CMAQ funds, because requiring such reporting could indirectly pressure States to

forego the flexibility provided by Congress. The Mississippi DOT urged FHWA to make concessions for rural areas and reduce or eliminate CMAQ reporting requirements for non-urban areas, and Oregon DOT asked that rural areas be exempt from the on-road mobile source emissions measure as the major contributors to the pollutions in such areas tend to be from road dust and topographical effects.

Since all ozone, carbon monoxide, or particulate matter nonattainment and maintenance areas, regardless of size, are eligible to receive CMAQ funds and all CMAQ funded projects must demonstrate an emissions reduction, FHWA has concluded that the emissions measure should apply to all such areas regardless of population. In contrast to the CMAQ PHED and Modal Share measures, the emissions measure does not raise significant challenges to achieve a fair balance between the benefits of the measure and the burden of applying it. The burden for reporting on this measure is easier than for the CMAQ traffic congestion measures, since the emissions measure data come from an existing database used since 1992. The FHWA has not made any changes in the final rule based on these comments.

Additionally, States with rural areas designated nonattainment or maintenance may obligate CMAQ funds in those areas. Therefore, they should also be subject to this measure. The FHWA has not made any changes in the final rule based on this comment. Finally, FHWA agrees that Congress provided the areas with flexible funds the ability to use those CMAQ dollars on CMAQ or Surface Transportation Block Grant (STBG) eligible projects. The FHWA does not agree, however, that this measure should be limited only to mandatory CMAQ projects. There is enough flexibility in how a State DOT or MPO establishes its target that it can account for any flexible funds it plans to spend on STBG eligible projects at that time. Therefore, FHWA has not made any changes in the final rule based on this comment.

4. Applicability of New Standards

One commenter encouraged FHWA to acknowledge the importance of good air quality in borderline nonattainment areas in the air quality performance measure, and another expressed concern that as the NAAQS become more stringent over time, the workload for State DOTs and MPOs to comply with the performance measure will increase because more nonattainment areas will be designated. Others suggested the rule build in a later deadline for such cases

and provide specific authority for a waiver to be granted to affected States and MPOs in terms of deadlines—when an area is newly designated as nonattainment, so that it can have more time in setting targets relevant to the affected area. Alternatively, GDOT recommended that nonattainment and maintenance designation for the baseline performance period be as of October 1, 2017 (one year in advance of first baseline report). The GDOT noted that given significant uncertainty over designation and revocation timeframes experienced over many years, this baseline would provide some assurances and, hopefully, avoid unnecessary resource expenditure based on assumed designations before October 2018.

The FHWA does not agree that special consideration or a waiver is needed for newly designated nonattainment areas. Potential areas have sufficient notice that they may be designated nonattainment. Therefore, States do not need more time to meet the performance measure requirements than afforded the other areas to establish targets. In addition, FHWA has clarified in the final rule that the baseline nonattainment and maintenance area designations should be based on area status as of October 1, 2017.

5. Reporting

Several commenters requested clarity on the timeframe for reporting emissions reductions. Several commenters suggested that emission reduction benefits for CMAQ-funded projects should be reported after the project has been completed and is open for use, rather than the first time CMAQ funding is obligated for the project. Others argued that the proposed on-road mobile source emissions measure reporting timing would be disadvantageous for smaller urban areas, because such MPOs sometimes use multiple years' allocations to fund a single project, which could give the false impression that an MPO failed to meet a target if there were no reportable emissions reductions for certain years. These commenters also asked FHWA to clarify the year to which the first March 1 and July 1 due dates apply.

Some commenters suggested that limiting emissions reductions benefits to a single year would understate the actual benefits realized because the life of the benefits last as long as the project, which can be from 1 year (e.g., operations) to decades (e.g., built facilities, locomotive repower projects). For this reason, they recommended that FHWA add two fields to the CMAQ Public Access System—one for year

open to service (or completion year) and one for expected service life, which would allow the benefits for a given project to count beginning in the year open to service and continue to be counted as long as the service life has not been exceeded. They said this approach would avoid the complication that would result from the use of advance construction to initiate projects if the rule relied on the first year of obligation as the emissions reduction benefits trigger. The commenters also suggested that FHWA consider a moving average for emissions reductions to smooth out the uneven implementation of projects, arguing that in some years a target would be exceeded while no benefits may be realized in other years. The Association of Metropolitan Planning Organizations and Fairbanks Metropolitan Area Transport System suggested that it may be better to report benefits on a project specific basis.

The California Association of Councils of Government et al. requested guidance regarding how States and MPOs should reconcile variations in emissions model outputs over time solely due to emissions model updates. Regarding the first performance report, AASHTO and Connecticut DOT asked if the emission reduction assigned at the time the project was entered would be the target value or if the projects need to be recalculated using current emissions modeling, emission factors, etc. to determine whether the target was met.

To keep this measure simple and consistent with the current CMAQ reporting requirements, a project's estimated emissions reductions are only for the first year of full operation. The information is entered in the CMAQ Public Access system only for the first year the project has funds obligated to avoid double counting benefits. The FHWA understands this approach may result in taking credit for a project in a performance period before it becomes operational, but believes the simplicity of this process is appropriate. The March 1 deadline for State DOTs to enter their CMAQ project information in the CMAQ Public Access System is not a new deadline. The CMAQ Program Guidance includes this same date for entering project information for the previous fiscal year. Therefore, this date applies now and will continue to apply with this final rule. The July 1 date is a new deadline for FHWA to ensure all information is in the CMAQ Public Access System. This due date will apply on July 1 after this final rule is effective.

The FHWA clarifies that there is no requirement to recalculate the emissions entered into the CMAQ Public Access

System or to make adjustments to emissions estimates previously entered into the Public Access System when U.S. EPA approves new models. States or MPOs that believe they would not be able to meet a target due to a change in the models can adjust the target at the performance period's mid-point or explain in their final performance report why they were unable to meet their targets due to model-based emissions estimate. The FHWA has not made any changes in the final rule based on these comments.

6. Concerns Related to Quantification of Emissions

Some commenters expressed concerns relating to quantifying emissions for certain projects such as fiber installation and traffic monitoring. Another commenter stated that transit projects may not demonstrate as much emissions reduction as heavy-duty engine replacement projects, even though additional transit service may be necessary to address regional and corridor congestion.

Several commenters asked that FHWA continue to give State DOTs discretion to determine if quantitative CMAQ reporting is required, or expressed support for not being required to quantify emissions benefits in every situation, or argued in favor of States having the ability to update information in the CMAQ database. However, several others commented that they do not want to have to update their emissions because it would not be a good use of resources.

The Oregon DOT and Washington State DOT disagreed with requiring CMAQ projects that fund operations improvements or are aimed at increasing person throughput to show a reduction in emissions, reasoning that latent demand often replaces any capacity made available by operational improvements. The Georgia DOT requested that FHWA provide guidance for establishing targets, because targets could be different by project types and limit/extent, and asked if the single target would reflect the total emission reductions of all projects in the nonattainment area during the 2- and/or 4-year timeframe. Expressing concern that 2- and 4-year targets will be difficult to set based on current information in the CMAQ Public Access System, Oregon DOT recommended that FHWA carry out additional research to determine how to successfully implement the on-road mobile source emissions measure.

Under the CMAQ program, State DOTs and MPOs have the discretion to fund projects where it is not possible or

easy to quantify the emissions benefit. However, these projects will not be accounted for in this performance measure since by the nature of the project, it is not possible to quantify the emissions benefit. Further, FHWA appreciates the concerns raised with respect to lifecycle benefits, but in order to keep the CMAQ reporting system simple and easy to use, it does not require the calculation of life cycle emissions benefits.

States and MPOs must use projects in the 4 years prior to the first performance year as a basis for establishing a target for the first performance period. The projects entered into the System during the 2- and 4-year performance period will be taken as is to calculate the measure. If a State or MPO felt they would not be able to meet a target, they could adjust the target at the mid-point of the performance period or explain in their final performance report why they were unable to meet their targets. The FHWA has not made any changes in the final rule based on these comments.

7. Application Beyond CMAQ Projects

The majority of commenters on this topic expressed concern over limiting the on-road mobile source emissions measure to only those projects that receive CMAQ funding. One argued it would be inefficient, another that emissions reductions from all recipients of CMAQ dollars should be assessed, and another that the best opportunity to reduce emissions comes from operations and capital projects. The Nashville Area MPO and T4A recommended that total emissions reductions be measured for areas designated as nonattainment or maintenance for ozone, carbon monoxide, or particulate matter and that targets under this measure should be set to consider all capital and operational opportunities to reduce emissions, not just those that receive CMAQ funding. Another noted that projects tend to have multiple funding sources. Other commenters recommended that the targets under the on-road mobile source emissions performance measure consider all transportation projects and not just CMAQ-funded projects, or that as emission reductions become more easily estimated, the measure could be expanded to all projects. One commenter encouraged FHWA to focus on successful actions States are taking rather than from where funding is coming. Another recommended that emission reductions should be assessed at the State or region scale.

In contrast, AASHTO and others expressed support for the proposal that the on-road mobile source emissions performance measure not apply to

States and MPOs that do not contain any portions of a nonattainment area. The Virginia DOT further recommended that FHWA consider a region-wide air quality measure, as CMAQ projects are generally a small subset of transportation projects. The AASHTO, Connecticut DOT, and Montana DOT urged FHWA not to require emissions data reporting as to flexible CMAQ funds, because requiring such reporting could indirectly pressure States to forego the flexibility provided by Congress.

The FHWA does not agree this measure should extend beyond the CMAQ program since the performance measure, as defined in 23 U.S.C. 150(c)(5), is specifically tied to the CMAQ program. The FHWA also does not agree that the measure should apply to all States or regions that receive CMAQ funds or that the emissions benefits included should extend beyond the CMAQ program. As noted in the NPRM, attainment areas are allowed flexibility in spending their CMAQ funds whereby projects are not required to adhere to specific CMAQ eligibility requirements. While there are many projects funded with monies beyond the CMAQ program that result in an emissions benefit, the performance measure, as defined in 23 U.S.C. 150(c)(5), is specifically tied to CMAQ program. The purpose of the CMAQ program is to fund transportation projects or programs that contribute to the attainment or maintenances of the NAAQS in nonattainment or maintenance areas. The FHWA has not made any changes in the final rule based on these comments.

8. Attainment Definition—Removal of Areas Beyond 20-Year Maintenance Plan

Oregon DOT suggested that an area should be considered attainment if it has reached the end of its 20-year maintenance plan.

The FHWA agrees that when an area reaches the end of its 20-year maintenance plan for an applicable pollutant, the CMAQ performance reporting requirement should no longer apply. Changes were made to the definition of "maintenance area" in section 490.101 and to the data requirements in section 490.809(c).

9. Modification of Emissions Information at 2-Year Report

The Connecticut DOT recommended that FHWA allow revisions to the applicability of the on-road mobile source emissions performance measure to certain criteria pollutants if the NAAQS designation status changes

during the 4-year performance period, especially at the 2-year midpoint.

The Oregon Metro Council and the Joint Policy Advisory Committee on Transportation expressed concern that the proposed rule was unclear about how to address delay and cancellation of projects funded by CMAQ in the emissions reduction reporting. In particular, this commenter asked about procedures for removing the emissions reductions already accounted for in previous reporting to ensure that emission reduction credit is not taken for a project that continues to get slipped and carried over from one year to the next.

The FHWA agrees that flexibility should be provided to areas if their designations change during the 4-year performance period. The FHWA has revised the language in § 490.809(c) so that nonattainment and maintenance areas will be revised if an area is no longer nonattainment or maintenance, for any pollutants in § 490.803.

10. Concerns About the CMAQ Public Access System Data; Use of Observed Data and Other Alternative Methods

Some commenters expressed concerns with data deficiencies in the CMAQ Public Access System that should be corrected before reliance on its use for the on-road mobile source emissions performance measure. For example, AASHTO and Connecticut DOT commented that the inability to de-obligate an entry was a deficiency in the User Profile and Access Control System (UPACS) that needs to be corrected to meet the requirements of the on-road mobile source emissions performance measure. The AASHTO, Oregon DOT, and Connecticut DOT expressed concern that emissions reductions often are estimated differently by different MPOs and that sometimes even similar projects within an agency have vastly different estimates. The Chicago Metropolitan Agency for Planning warned that it will be difficult to ensure data quality submitted for performance reports because projects in the database have not matched up well with local project descriptions, which is in part a result of the local programmer (often the MPO) submitting data to the State, which then repackages it for submission to the Public Access System. Others commented that because the UPACS/ Public Access System is intended to track emissions reductions benefits, it is not well suited to evaluate attainment of targets. One commenter noted that adding health impact information for each pollutant would be useful to decisionmakers. Another recommended that FHWA provide a workbook to input

more environmental information into the CMAQ Public Access System (e.g., population density, traffic congestion, extreme weather events). The Pennsylvania DOT recommended that the emission reduction performance measure should be based on cost-effectiveness.

Several commenters sought clarification on various issues related to calculating emissions reductions for purposes of the proposed on-road mobile source emissions performance measure, and various alternative methods or improvements to the UPACS/CMAQ Public Access System were suggested.

The Oregon Metro Council and the Joint Policy Advisory Committee on Transportation expressed concern that the proposed on-road mobile source emissions performance measure does not meet the same standards as other performance measures because it is not based on observed data.

The Oregon DOT and Washington State DOT commented that collecting emissions data on a project-by-project basis through vehicle probing or other means would be cost-prohibitive and take years to collect enough data to use. Others recommended that FHWA create a look-up table that it would update periodically and which lists emission reductions that may be expected for a range of smaller projects. Similarly, Oregon DOT suggested that FHWA consider ways to quantify some projects that nationwide tend to have missing data.

While FHWA is aware that this measure is based on estimated emissions reduction, not measured or observed emissions, the tools to do otherwise are not available, and the time needed to measure the change in emissions from every CMAQ project would be not be practicable. State DOTs and MPOs have been strongly encouraged to quantitatively report their emission benefits for all CMAQ projects since 1992. The first modules of FHWA's tool kit of best practices are already available, and additional modules now under development will be available before the first performance period. No changes were made in response to these comments.

11. Applicability of Measure to All Criteria Pollutants and Precursors

The United States Green Building Council commented that MPOS should be required to measure the criteria air pollution of their plans and subsequently work to reduce criteria pollutant levels. Another suggested that the on-road mobile source emissions performance measure should allow

States and MPOs to include emissions reductions from CMAQ projects for all criteria pollutants (and their precursors), regardless of the type of attainment/nonattainment areas in which the project is located. This commenter reasoned that it may be difficult to separate out reductions that only pertain to the specific nonattainment and maintenance areas, particularly for regional or statewide CMAQ projects.

Several commented that no other non-CMAQ pollutants should be added to the on-road mobile source emissions performance measure. Specifically, Oregon DOT recommended that FHWA limit defined pollutants and not include open ended definitions that have the potential to expand performance measure burdens under this rule due to actions by another agency. The Connecticut DOT commented that subpart H performance targets only should be set for criteria pollutants for which a State currently reports emissions reductions.

The FHWA agrees that it is not always easy to determine the emissions benefits for some projects by nonattainment or maintenance area. However, to the extent an area wants to take credit for the emissions reductions for a statewide project, they should use the best tools available to determine which portion of that project benefits their area. This problem is not new to the CMAQ program or even regional emissions analyses under transportation conformity that must account for the emissions of all projects within a nonattainment or maintenance area. Therefore, FHWA has not made any changes in the final rule based on this comment.

12. Use of Standard System Versus Metric System To Measure Emissions

The AASHTO and Connecticut DOT recommended that FHWA change the protocol for the CMAQ Public Access System from the metric system (kg/day) to standard (lbs/day) for consistency to life of the project cost effectiveness. Others recommended that emission reduction benefits be compared in tons per annualized days to allow a fair comparison between projects that may have a varied number of effective days. The Association of Metropolitan Planning Organizations commented that converting the kilograms per day emissions data to tons per year does not provide any new information about the performance of the project or how it compares to other projects. Rather than having the measure be expressed in short tons per year, one commenter suggested that the measure should be

expressed in total number of short tons of pollutant removed over the 2- and 4-year periods. This commenter also recommended that the equation given in section 490.813(b) should be modified to add a parameter for the number of years or the regulation should provide an additional equation for the 4-year calculation.

The FHWA agrees with the concerns raised about the proposed metric and therefore has removed that conversion from the emissions measure calculation in section 490.813(b). This change also results in a change in the units for the emissions measure in section 490.813.

VI. Section-by-Section Discussion of the General Information and National Performance Management Measures; Assessing Performance of the National Highway System, Freight Movement on the Interstate System, and Congestion Mitigation and Air Quality Improvement Program

A. Subpart A—General Information

Discussion Section of § 490.101 Definitions

The FHWA made the following changes and additions to the definitions proposed in the NPRM.

American Community Survey (ACS)—A definition was added to describe a data source that is needed to support new required measure components. The ACS is being identified as a source of information to acquire data on travel choices to journey to work in urban areas.

Freight bottlenecks—The definition of “freight bottleneck” has been changed to “truck freight bottleneck” and revised to provide a general description that allows State DOTs to determine based upon individual context. The definition also does not limit the location to the Interstate. Each State will need to define what constitutes bottlenecks based upon the specific context of the State and the local impediments that each State experiences with regard to freight movement.

Maintenance area—FHWA has amended the definition of maintenance area to exclude areas that reach the end of their 20-year maintenance period for the purposes of part 490.

National Performance Management Research Data Set (NPMRDS)—the definition of the NPMRDS was revised to clarify that only mainline highway portions of the NHS are included in the data set. In addition, the definition was revised to change the interval of travel times from 5 to 15 minutes.

Non-SOV Travel—a definition was added for travel occurring on modes other than driving alone in a motorized

vehicle and includes travel that is avoided by telecommuting. This definition was added as the term, “non-SOV Travel,” is used within the regulatory text as an indicator of transportation mode choice.

Discussion Section of § 490.103 Data Requirements

The FHWA made the following changes regarding Data Requirements.

Throughout the final rule the timing for determination of measure applicability has been changed from “at the time when the State Baseline Performance Period Report is due” to “one year before the time when the State Baseline Performance Period Report is due.” In § 490.103(c), State DOTs must use the nonattainment and maintenance boundaries based on the most recent EPA designations at the time that is “one year before” the State Baseline Performance Report is due. As discussed in the change to the definition of “maintenance” areas, EPA designations of maintenance areas that have reached the end of their 20-year maintenance period will not be applicable to the requirements of subpart H.

The FHWA revised the equivalent data requirements under section 490.103(e)(5)(ii) to clarify that the equivalent data set only is required to include travel time data for the “mainline highways” on the NHS. In addition, § 490.103(e)(5)(ii) was revised to include travel times at a maximum of 15 minute intervals. The temporal granularity of the average travel times in the equivalent data was reduced from the proposed 5 minute interval level to 15 minutes.

In section 490.103(e)(5)(iii), for equivalent data sets, travel must be observed and may be derived from travel times over longer time periods (known as path processing or equivalent).

Text was added in § 490.103(f)(1) to clarify that it is acceptable to use the NPMRDS Travel Time Segments as the Reporting Segments by stating that it is optional to create new Reporting Segments.

The FHWA revised § 490.103(f)(2) to increase the maximum length of reporting segments in urban areas from ½ mile to 1 mile (unless an individual Travel Time segment is longer).

In § 490.103(g) of the NPRM, FHWA proposed that the State DOT would submit its reporting segments for the NHS and the desired travel times for applicable⁶⁷ reporting segments to

HPMS no later than November 1, prior to the beginning of the calendar year in which they will be used for travel time data collection. The FHWA also proposed that these reported reporting segments would be used throughout the performance period. The FHWA felt that a 2-step data reporting (first step is reporting segments and desired travel times and second step is reporting metric data for corresponding reporting segments) along with constant reporting segments throughout the performance period is necessary to ensure consistency between data sets at the time of target establishment and subsequent progress evaluations. Since this final rule removes the proposed Peak Hour Travel Time measures in section 490.507, travel time data sets could change (NPMRDS to/from an equivalent data set) during a performance period, and removing the requirements to maintain constant NHS limits during a performance period in section 490.105(d)(3), FHWA believes the first step of data reporting unnecessary. Accordingly, FHWA removes, in the final rule, the proposed reporting requirement for reporting segments and desired travel times prior to the beginning of the calendar year in which they will be used for travel time data collection in § 490.103(g). The FHWA believes that eliminating this reporting step will reduce the burden on the State DOTs. As a result, FHWA moves the requirement for documentation of the State DOT and applicable MPOs coordination and agreement on the travel time data set in § 490.103(g)(4) in the NPRM to § 490.103(f)(4) in the final rule. The FHWA also moves the requirement for the reporting segments in an equivalent data be referenced by HPMS location referencing standards in § 490.103(g)(5) in the NPRM to § 490.103(e)(5)(i) in the final rule.

Section 490.103(g) has been revised in this final rule. In this section, State DOTs are encouraged to report the Posted Speed Limits for the full extent of the NHS via HPMS as this data is needed for State DOTs to identify the occurrence of excessive delays.

Discussion Section of § 490.105 Establishment of Performance Targets

Section 490.105(d)(3) and (e)(3)(i)— Maintaining Urbanized Area Constant Throughout a Performance Period

In section 490.105(d)(3), FHWA removes the requirement for maintaining urbanized area constant throughout a performance period. The FHWA made this change because the requirements for NHS limits constant

⁶⁷ Reporting segments on NHS located within urbanized areas with populations over 1 million for the proposed Peak Hour Travel Time measures.

throughout a performance period was eliminated in the final rule for the second performance management measures. In addition to consistency between NHS limits data and urbanized area data, FHWA believes State DOTs and MPOs will have sufficient time to adopt updated U.S. Census decennial census data in their target establishment/adjustment since the NHS and urbanized area data used for travel time data collection for a calendar year will have a 2-year time lag. For example, 2015 NHS limits and urbanized area data collected is reported in 2016 to HPMS and that data will be used for travel time data collection in 2017. Additionally, HPMS allows 2 years to adopt updated decennial census urbanized area data. So, FHWA believes that there will be adequate time between U.S. Census publications of decennial census urbanized area data and target establishment and adjustment. For these reasons, FHWA revises § 490.105(d)(3) for removing the requirement for maintaining urbanized area constant throughout a performance period for the urbanized area specific targets, as provided in § 490.105(e)(8). For the same reason, the FHWA revises § 490.105(e)(3)(i) so that State DOTs no longer required to “declare” the boundaries used to establish each additional target and so that changes in urbanized area will be accounted for the additional targets, as described in § 490.105(e)(3).

Section 490.105(e)(8)(i) and (ii) and (f)(5)(i) and (ii)—Urbanized Area Population Threshold for CMAQ Traffic Congestion Measures

In section 490.703, FHWA revises the urbanized area population threshold for traffic congestion measures, in § 490.707(a) and (b), from 1 million to 200,000. In response to the revision in section 490.703, FHWA revises § 490.105(e)(8)(i), (e)(8)(ii), (f)(5)(i), and (f)(5)(ii). In § 490.105(e)(8)(i) and (f)(5)(i), the 1 million population threshold only applies to the first performance period (*i.e.*, the performance period beginning on January 1, 2018). In § 490.105(e)(8)(ii) and (f)(5)(ii), the 200,000 population threshold applies to the second performance period (*i.e.*, the performance period beginning on January 1, 2022) and all subsequent performance periods thereafter.

Sections 490.105(e)(8)(iii), (f)(5)(iii), and (f)(6)(iii), and 490.107(c)(3)—Population Data Sources for CMAQ Measure Applicability Determination

Total population of an urbanized area in section 490.713(b) in the final rule is

revised from the Decennial Census population number to the most recent annual population estimate from the U.S. Census Bureau. Section 490.105(e)(8)(iii)(D) and (f)(5)(iii)(D) have been revised so that the data source for applicability determination and the measure computation are the same.

To maintain consistency with the population data source for determining the applicability of the CMAQ traffic congestion measures, FHWA revises sections 490.105(f)(6)(iii) and 490.107(c)(3) to use the most recent annual population estimates from the U.S. Census Bureau in determining which MPOs are required to submit MPO CMAQ Performance Plan.

Section 490.105(e)(8) & (9) and (f)(5) & (6)—CMAQ Measure Applicability Determination Timing and Methodology

In paragraphs (e)(8)(iii)(D) through (F), (e)(8)(iv), (f)(5)(iii)(D) through (F) and (f)(5)(iv), FHWA revises the timing of determining which State DOTs and MPOs are required to implement traffic congestion measures in § 490.707(a) and (b). The applicability determination for traffic congestion measures will be made 1 year before when the State DOT Baseline Performance Period Report.

In paragraphs (e)(9)(v) and (f)(5)(v), FHWA revises the timing of determining which State DOTs and MPOs are required to implement on-road mobile source emissions measure in § 490.807. The applicability determination for on-road mobile source emissions measure will be made 1 year before when the State DOT Baseline Performance Period Report.

In paragraphs (e)(8)(iii)(F), (e)(8)(v), (f)(5)(iii)(F), and (f)(5)(v) of this section, FHWA revises the requirements for the determination of nonattainment and maintenance areas to revisit the designations one year before the State DOT Mid Performance Period Progress Report is due to FHWA. Any urbanized areas that are determined at this point to be no longer in nonattainment or maintenance for a criteria pollutant included in section 490.703 will not be subject to the traffic congestion measure requirements for the remainder of the performance period.

In paragraphs (e)(9)(v), (e)(9)(viii), and (f)(6)(v) of this section, FHWA revises the requirements for the determination of nonattainment and maintenance areas to revisit the designations one year before the State DOT Mid Performance Period Progress Report is due to FHWA. Any area within State boundary or metropolitan planning area that are determined at this point to be no longer in nonattainment or maintenance for

any criteria pollutant included in section 490.803 will not be subject to the on-road mobile source emission measure requirements for the remainder of the performance period.

In paragraphs (e)(8)(vi) and (f)(5)(vi) of this section, FHWA revises the phase-in for the establishment of urbanized area specific targets. The phase-in does not require State DOTs and MPOs to establish a 2-year target for the first performance period to provide time to build capacity and to acquire sufficient to calculate the new PHED measure in § 490.707(a). The phase-in of urbanized area specific targets does not apply to the new non-SOV travel measure in § 490.707(b).

Discussion Section of § 490.107 Reporting on Performance Targets

Section 490.107(a)(4)—Initial State Performance Report

Section 490.107(a)(4) and (5) have been removed in this final rule.

Section 490.107(b)(1)(ii)(E)—NHS Limits for Targets

The NHS limits for targets are removed from section 490.107(b)(1)(ii)(E) and State are not required to include them in the State Baseline Performance Period Report. This requirement was removed as NHS limits will not be held constant for the duration of the performance period in the assessment of progress made by State DOTs to achieve targets. As discussed in the Pavement and Bridge Condition Performance Measure final rule, commenters felt that changes in NHS limits that may occur from year to year can be reasonably considered in the establishment of targets.

Section 490.107(b)(1)(ii)(E), (b)(2)(ii)(D), and (b)(3)(ii)(D)—Reporting Congestion at Truck Freight Bottlenecks

Section 490.107(b)(1)(ii)(E), (b)(2)(ii)(D), and (b)(3)(ii)(D) have been revised to clarify that States must document the location of freight bottlenecks with the State including those identified in the National Strategic Freight Plan. The section also sets forth the conditions under which a State Freight Plan may serve as the basis for identifying truck freight bottlenecks.

Section 490.107(b)(1), (2) and (3)—Reporting Metrics for GHG Measure

As discussed in the discussion section for § 490.511, State DOTs are required to report total annual on-road CO₂ emissions on the NHS and total annual on-road CO₂ emissions, for the measure specified in § 490.507(b), to FHWA as part of the State Biennial Performance Report. Accordingly, FHWA adds

§ 490.107(b)(1)(ii)(H), (b)(2)(ii)(J), and (b)(3)(ii)(I) in the final rule.

Section 490.107(b)(1)—Reporting Data Collection Method for the Percent Non-SOV Travel Measure

As discussed in discussion section for § 490.709, State DOTs are required to report in their Baseline Performance Period Report the data collection method that is used to determine the Percent non-SOV Travel measure, in section 490.707(b), for each applicable urbanized area in the State, as provided in section 490.709(f)(2). Accordingly, FHWA adds § 490.107(b)(1)(ii)(I) in the final rule.

Section 490.107(c)(3)—MPO CMAQ Performance Plan Applicability Determination Timing

In § 490.107(c)(3), FHWA revises the timing of determining which MPOs are required to develop and report CMAQ Performance Plan. The applicability determination for the MPO CMAQ Performance Plan will be made 1 year before when the State DOT Baseline Performance Period Report. Also, FHWA revises § 490.107(c)(3) so that nonattainment and maintenance areas to revisit the designations one year before the State DOT Mid Performance Period Progress Report is due to FHWA. Any area within metropolitan planning area, within an urbanized area with a population greater than 1 million, that are determined at this point to be no longer in nonattainment or maintenance for any criteria pollutant included in section 490.803 will not be subject to the MPO CMAQ Performance Plan for the remainder of that performance period.

B. Subpart E—National Performance Management Measures for the NHPP System Performance

Discussion Section 490.503 Applicability

The FHWA removed the applicability language relating to Peak Hour Travel Time measures because those measures have been removed from the rule. The FHWA added a provision for the GHG measure in § 490.507(b), making it applicable to all mainline highways on the Interstate and non-Interstate NHS.

Discussion Section of § 490.505 Definitions

The following changes were made to the definitions in section 490.505 to address comments received.

A definition has been established to define Greenhouse Gas as any gas that

absorbs infrared radiation in the atmosphere. The definition further notes that ninety-five percent of transportation GHG emissions are carbon dioxide (CO₂) from burning fossil fuel. Other transportation GHG emissions are methane (CH₄), nitrous oxide (N₂O), and hydrofluorocarbons (HFCs). The definition also establishes the acronym, “GHG,” that is used throughout the section to refer to Greenhouse Gas. This definition has been added as a GHG measure is established in this section to assess system performance.

The proposed definitions for Desired Peak Hour Travel Time, Peak Hour Travel Time, The Peak Period, and Peak Hour Travel Time Ratio were all removed from section as the measure of the percentage of the system meeting peak hour travel time expectations has been removed.

Discussion Section of § 490.507 National Performance Management Measures for System Performance

The NHPP Reliability measure has been changed from, “Percent of the Interstate System providing for Reliable Travel Times,” to “Percent of person-miles travelled on the Interstate System that are reliable.” This same change has been made for the non-Interstate NHS reliability measure. The proposed Peak Hour Travel Time measures were removed in the final rule.

The FHWA added a GHG emissions performance measure in this section. The FHWA established the measure in a manner that utilizes existing data sources and minimizes burden on transportation agencies.

The GHG emissions performance metric is on-road CO₂ emissions from vehicles operating on the NHS. The measure will be expressed as a percent change in CO₂ from a reference year of 2017 levels in order to provide more meaning and context to decisionmakers and the public than a measure using a certain number of metric tons of CO₂.

Discussion Section of § 490.509 Data Requirements

Section 490.509(a) Through (e)—Data Requirement for the Reliability Measures

The FHWA removed the proposed requirement to replace missing travel times with travel time at posted speed limit for the NHPP Reliability measures and all other travel time derived measures in part 490. After further analysis of data and consideration of

comments received, it was determined that, in cases where a considerable portion of the data was missing, the addition of the imputed travel times inaccurately skewed the measure results. In addition, FHWA believes that the occurrence of missing data will be reduced due to the greater prevalence of probes in the future, the allowance of path processing techniques to identify travel times, and the decreased temporal granularity of the measurements from 5 minutes to 15 minutes.

In addition, FHWA has added paragraph (e) in this section to allow State DOTs to exclude any travel times that may have been collected while the roadway was closed.

The FHWA added requirements to identify the data sources for both average annual daily traffic (AADT) volumes and average occupancy factors to support the data needs to adjust the NHPP Reliability measures to reflect person-miles of travel on the NHS. The HPMS has been identified as the data source for segment AADT, which is used to represent a full year of traffic volume by multiplying the average daily value by 365. Average occupancy factors will be determined and published by FHWA on its Web site from national surveys focused on household travel. The FHWA anticipates using the National Household Travel Survey (NHTS) to develop these factors for every State and large metropolitan areas. State DOTs, MPOs, and FHWA will be able to use the combination of total annual traffic volume, average occupancy factors, and length of reporting segment to weight the associated impact of reliability performance on all people traveling on the roadway annually.

Section 490.509(f) Through (h)—Data Requirements for the GHG Measure

The data requirements for calculating the CO₂ emissions performance measure are: (1) Emissions factors of CO₂ per gallon of motor fuel, (2) annual motor fuel sales volumes, and (3) vehicle miles of travel on the NHS and on all roads. Data sources for each are readily available.

The FHWA will post the applicable emissions factors annually by August 15 for use in calculating the performance measure for a range of fuels, based on U.S. Energy Information Agency (EIA) data.⁶⁸ Examples of emissions factors are listed below for informational purposes:

⁶⁸ U.S. Energy Information Agency, and <http://www.eia.gov/tools/faqs/faq.cfm?id=307&t=11>.

Fuel	Pounds CO ₂	Kilograms CO ₂
E10 (Gasoline with 10% ethanol)	18.95/gallon	8.59/gallon.
Gasoline	19.60/gallon	8.89/gallon.
Diesel	22.40/gallon	10.16/gallon.
Compressed Natural Gas (CNG)	54.60/McF (McF = 1,000 Cubic Feet)	24.76/McF (McF = 1,000 Cubic Feet).

State DOTs already collect information on fuel sales for motor vehicle fuels and report it to FHWA. In order to provide maximum flexibility and promote ease of use, State DOTs may use either of the following sources for annual motor fuel sales information:

1. Annual fuel sales volumes as posted August 15 for the previous year in FHWA's *Highway Statistics* in Table MF-21 "Motor Fuel Use."⁶⁹ Fuel sales are provided as a total number of gallons for combined gasoline/gasohol (gasoline ethanol blends such as E10), and special fuels (diesel, biodiesel, natural gas, etc.) combined. According to EIA, 95 percent of current gasoline sales are of E10 (ten percent blend of ethanol with gasoline).⁷⁰

2. The State DOT's fuel sales data the State DOT used to create the summary data included in FHWA's MF-21, if it allows for a great level of detail by fuel type. The FHWA encourages States to track sales at a more granular level and to use the appropriate emissions factor posted by FHWA for each sub-fuel. State DOTs shall make this data available to FHWA, upon request.

Vehicle miles of travel on the NHS and on all roads by State are published in FHWA's *Highway Statistics* in Table VM-3 "Vehicle Miles of Travel, by Federal-Aid Highways." For consistency, the measure uses the most recent published annual data as of August 15 of the year in which the metric is being calculated. For example, State DOTs will access the most recent data on August 15, 2018, to calculate the annual CO₂ emissions on the NHS in 2017.

Discussion Section of § 490.511 Calculation of System Performance Metrics

Section 490.511(b) and (e)—Metric for Reliability Measures

The FHWA changed the basic time period for the travel time reliability measure from 5 minutes to 15 minutes. The FHWA also clarified that reporting segment-level reliability metrics and related data can be reported by either

NPMRDS TMC segment(s) or HPMS sections.

The FHWA added information to be reported to HPMS along with the metric-related information, including directional AADT (the AADT in the direction of travel for the reporting segment) and a vehicle occupancy factor if not using the FHWA-supplied factor.

Sections 490.511(c), (d), and (f)—Metric for the GHG Measure

State DOTs are required to calculate annual total tailpipe CO₂ emissions on the NHS as the metric for the GHG measure. To calculate the CO₂ emissions performance metric, State DOTs will use a methodology that relies on fuel sales volumes.

In order to calculate total annual on-road CO₂ emissions, the total volume of each fuel sold is multiplied by the appropriate CO₂ emission factors. The total CO₂ emissions for each fuel type are then summed. The CO₂ emissions measure is specific to the performance of the NHS. Therefore, it is necessary to estimate the portion of on-road CO₂ emissions attributable to the NHS by State.⁷¹ Existing data does not differentiate the exact volumes of fuel burned on the NHS versus the volume of fuels burned on other roads. Therefore, States will use the proportion of the State's VMT that occurs on the NHS as a proxy for the proportion of the State's on-road CO₂ emissions on the NHS.⁷² State DOTs calculate on-road CO₂ emissions on the NHS by multiplying on-road CO₂ emissions by the proportion of NHS VMT out of total VMT.

As fuel sales volumes are not generally available at the metropolitan area level, State DOTs and MPOs have flexibility on how they calculate on-road CO₂ emissions for MPOs. Options range from simply using the MPO share of the State's VMT as a proxy for the MPO share of CO₂ emissions, to more

detailed analytical methods, such as using travel demand modeling and EPA's MOVES model,⁷³ or using FHWA's EERPAT model. These methods are discussed in detail under Section V. An MPO also may use another methodology if the methodology is demonstrably valid and useful for CO₂ measurement. The use of a methodology not described in the rule does not require FHWA approval, but is subject to oversight.

State DOTs will report total annual on-road CO₂ emissions on the NHS (the GHG metric) and total annual on-road CO₂ emissions (the step in the calculation prior to computing the GHG metric) to FHWA as part of the State Biennial Performance Report. State DOTs will report the 2017 on-road CO₂ emissions on the NHS in the first Biennial Performance Report. State DOTs will use the 2017 reference value calculated for the first Biennial Performance Report in future Biennial Performance Reports unless FHWA posts on its Web site that there has been a change that warrants recalculation of the 2017 value, in which case the State DOT will provide an updated value in the next Biennial Performance Report. State DOTs will report the GHG metric and total annual CO₂ emissions, every 2 years in their Biennial Performance Report for each of the preceding 2 calendar years. In doing this, the State DOT can either acquire the data needed for both years at once to calculate the metric, or they can calculate the metric each year. In either case, the State DOT will report both years to FHWA at one time in their Biennial Performance Report.

Discussion Section of § 490.513 Calculation of System Performance Measures

Section 490.513(a) has been revised to more clearly identify that State DOTs and MPOs will calculate measures in this section for the purpose of carrying out the system performance related performance requirements of part 490 and that FHWA will calculate measures in this section for the purpose of making significant progress determinations and for reporting on system performance.

⁶⁹ Note that the highway use fuel sales data in MF-21 includes only the fuel that is used to power on-road vehicles and does not include the fuel used for road construction or off-road activities such as powering lawn-mowers and construction equipment.

⁷⁰ www.eia.gov/todayinenergy/detail.php?id=26092.

⁷¹ Travel on the NHS accounts for approximately 55 percent of total U.S. VMT, varying by State.

⁷² FHWA recognizes that this is not a perfect proxy, as speeds, operating conditions, and vehicle types on the NHS differ from those on other roads and differ between states. However, in balancing the competing goals of simplicity and precision, FHWA believes that this approach provides actionable information that DOTs and MPOs can use in evaluating system performance and making decisions, without significantly increasing workloads.

⁷³ Or EMFAC in California.

Section 490.513(a) Through (c)— Calculation of Reliability Measures

Section 490.513 has been revised to change the measure calculation method to add in weighting for person-miles traveled. The NHPP Reliability measure is calculated by summing the product of the total annual traffic volume, the average occupancy factor, and the segment length for each reporting segment that is exhibiting a LOTTR below 1.50 and comparing this, as a percentage, to the total person-miles traveled on the full system. This method has been designed to accommodate unique occupancy factors for each reporting segment if this information is available through data tables provided by FHWA as discussed in section 490.509.

Section 490.513(d)—Calculation of the GHG Measure

Total annual tons of CO₂ emissions from on-road transportation sources on the NHS are expressed as a percent change from 2017, computed to the nearest tenth of a percent. This is in accordance with common practice of expressing GHG emissions goals in terms of a percent change from a certain year.

C. Subpart F—National Performance Management Measures for Freight Movement on the Interstate

Discussion of Section 490.607 National Performance Management Measure To Assess Freight Movement on the Interstate System

The FHWA has eliminated the performance measure for Percent of Interstate System Mileage Uncongested. The final and sole performance measure for freight will be Truck Travel Time Reliability Index, which represents the average reliability index of all reporting segments on the Interstate system.

Discussion of Section 490.609 Data Requirements

Consistent with changes to sections 490.509 and 490.511(b), FHWA has revised the time bin intervals in this section from 5 to 15 minutes. This rule also revises the approach to missing data, adopting a requirement that when truck travel times are not available in the travel time data set (data not reported, or reported as “0” or null) for a given 15 minute interval, the missing travel time will be replaced with an observed travel time that represents all traffic on the roadway during the same 15 minute interval (“all vehicles” in NPMRDS nomenclature). Changes were also made to the method to replace missing truck travel times to remove the

requirement to only allow all vehicle travel times to be used as a replacement for truck travel times when this time was less than or equal to the posted speed limit. The FHWA also added a provision allowing State DOTs to exclude time periods when an NHS roadway is closed.

Discussion of Section 490.611 Calculation of Freight Movement Metric

First, as discussed in section 490.607, the Percent of the Interstate System Mileage providing for Reliable Truck Travel Time proposed in the NPRM has been renamed the Truck Travel Time Reliability (TTTR) Index. Second, the TTTR Index has been revised in several ways.

The TTTR Index measure now includes five time period components to better consider the variability in travel times experienced by trucks during all hours of the day and throughout the year. These time periods were selected to be consistent with the time periods used to calculate the LOTTR as proposed in the NPRM and finalized in section 490.511. As discussed in §§ 490.511 and 490.611, FHWA revised the data bins to use 15-minute intervals. The TTTR Index metrics are calculated as the ratio of the 95th percentile travel time divided by the 50th percentile travel time for each segment and each time period.

The reporting of the metric has been revised to require the reporting of the TTTR Index, the 95th percentile travel time, and the 50th percentile travel time for each of the five time periods for each reporting segment.

Discussion of Section 490.613 Calculation of Freight Movement Measure

Section 490.613(a) has been revised to more clearly identify that State DOTs and MPOs will calculate measures in this section for the purpose of carrying out the freight related performance requirements of part 490 and that FHWA will calculate measures in this section for the purpose of making significant progress determinations and for reporting on freight performance.

The method for calculating the freight performance measure has been changed from the proposed Percent of the Interstate System Mileage Providing for Reliable Truck Travel Times to a TTTR Index for the five time periods noted in § 490.611. Instead of using a threshold for determining if a section of Interstate is reliable, as proposed in the NPRM, an index is calculated and averaged for the entire Interstate in the State. The average TTTR Index is calculated by multiplying the maximum TTTR Index

metric of all 5 time periods for each reporting segment by the length of the reporting segment, then the sum of all segments is divided by the total length of Interstate to generate an average TTTR Index for the entire applicable area. This approach to calculating the measure will differentiate it from the NHPP Travel Time Reliability measure, and remove the expectation to maintain a TTTR below 1.50 to better recognize incremental improvements to system performance.

D. Subpart G—National Performance Measures for CMAQ Program—Traffic Congestion

Discussion Section of § 490.703 Applicability

The FHWA has decided to phase-in this expansion of the applicability of the CMAQ Traffic Congestion measures to medium-sized urbanized areas, recognizing that calculating the Peak Hour Excessive Delay (PHED) measure may be burdensome in the short term for some smaller urbanized areas in light of other new performance measure requirements.

The CMAQ Traffic Congestion measures of PHED and Modal Share focus on addressing traffic congestion that contributes to air pollution in areas classified as in nonattainment or maintenance under the Clean Air Act. The final rule revises §§ 490.703 and 490.105(e)(8)(i), (e)(8)(ii), (f)(5)(i), and (f)(5)(ii) so that the CMAQ Traffic Congestion measures in section 490.707 initially apply to the urbanized area with a population of more than 1 million that contains any part of nonattainment or maintenance areas, before expanding to nonattainment or maintenance areas with a population over 200,000 for the second and all subsequent performance periods.

The FHWA also revised section 490.703 to base the applicability on urbanized area attributes (existence of NHS mileage, population, and attainment status). The proposed section in the NPRM applied the measure to the NHS. This was changed because the new non-SOV travel measure applies beyond the NHS.

Discussion Section of § 490.705 Definitions

The FHWA limits the excessive delay measure to peak hours, which are revised from the peak hours in the Peak Hour Travel Time Reliability measure in the NPRM. The peak periods in the final rule include 9:00 to 10:00 a.m. and to provide flexibility to State DOTs and MPOs to add a fourth hour (either 3:00 to 4:00 p.m. or 7:00 to 8:00 p.m.) for the

afternoon peak period. The FHWA provides flexibility only within the 6:00 a.m. to 8:00 p.m. time period to be consistent with the dataset used in the reliability measure under section 490.103.

FHWA revises the speed threshold in the final rule to be 60 percent of the posted speed limit with a minimum of 20 mph.

Discussion Section of § 490.707 National Performance Management Measures for Traffic Congestion

In the NPRM, FHWA proposed excessive delay per capita as the measure of traffic congestion under CMAQ. This measure has been revised as described in section 490.705 to reflect the total peak hour excessive delay experienced by all travelers, normalized by the total population in the applicable area. In this final rule, the revised measure is peak hour excessive delay per capita.

The FHWA revised section 490.707 in the final rule to include a new measure under the CMAQ program that reflects the percentage of non-single occupancy vehicle trips taken by travelers within an urbanized area. This measure will help State DOTs and MPOs better understand the impact of lower-emission travel methods on their congestion profile and area air quality.

Discussion Section of § 490.709 Data Requirements

Discussion Section 490.709(a) Through (e)—Data Requirements for the Annual Hours of Peak Hour Excessive Delay Per Capita Measure

The FHWA retained the data requirements to determine hourly traffic volumes proposed in the NPRM and added a new allowance in section 490.709(c)(5) for travel times that represent periods when the roadway is closed.

The FHWA added § 490.709(d) and (e) in the final rule to establish the data needed to estimate the impact of travel time delay on all travelers. The method is used to group roadway traffic on the NHS into three types of vehicles, including: Trucks, buses, and cars and then estimates the total number people traveling by applying occupancy factors for these vehicles, respectively.

Section 490.709(d) has been established to specify the allowable methods to determine the volume of buses, trucks, and cars as a percentage of daily traffic using each roadway segment. Two methods are specified that provide State DOTs the option of determining the percentage of the three vehicle groups based on annual traffic

volume counts collected by continuous count stations or by using the average annual counts provided in the HPMS for each segment. State DOTs are required to distribute the traffic volumes to different directions of roadway when using the HPMS data to estimate volumes.

Section 490.709(e) has been established to specify the allowable methods to determine vehicle occupancy factors for buses, trucks, and cars. State DOTs have the option to use occupancy factors provided by FHWA and/or develop occupancy factors that are more specific than those provided by FHWA. The latter will be useful when specific strategies are used to increase person throughput (e.g., construction of high occupancy lanes, dedicated bus lanes, ride sharing). The FHWA intends to develop default occupancy factors for each applicable urbanized area using bus ridership data provided in the NTD and car occupancy rates derived from national travel surveys, such as the NHTS and ACS. A default occupancy factor of 1.0 will be used for trucks. The FHWA intends to update these occupancy factors on a routine basis. To supplement the default occupancy factors, State DOTs and MPOs are provided the option to develop occupancy factors for sections of NHS roads where more specific data on vehicle occupancy is available. This option will be useful when specific strategies are used to increase person throughput such as the construction of high occupancy lanes, dedicated bus lanes, and ride sharing.

Discussion Section 490.709(f)—Data Requirements for the Percentage of Non- SOV Travelled Measure

The FHWA revises section 490.709(f) in the final rule to include data requirements for the measure of non-SOV mode share. The FHWA provides State DOTs and MPOs with several data options for calculating this measure. One option is to use Table DP03 of the ACS for the urban area to estimate the total percent of non-SOV commuting to work travel in the urbanized area. A second option is for State DOTs or MPOs to use local surveys to estimate the percentage of non-SOV travel occurring in the urbanized areas. These surveys may focus on either household or work travel and must be conducted within the 2 years before the start of the performance period and be updated on at least a biennial frequency. A third option is for State DOTs and MPOs to estimate the percent of non-SOV travel based on volume measurements of actual use of each transportation mode, including but not limited to cars,

bicycles, pedestrian travel, travel avoided by telework, and on-road bus transit. Use or development of the third option is encouraged by FHWA as it will provide the most accurate data for future use. State DOTs and MPOs have flexibility to determine which of these count methodologies to use and are required to report these methodologies to FHWA. State DOTs are also encouraged to report these use counts to currently available national data sources, including the Travel Monitoring Analysis System (TMAS).

The FHWA revises section 490.709(g) that determines which State DOTs and MPOs are required to implement both CMAQ traffic congestion measures in § 490.707(a) and (b). This determination will be based on the most recent annual populations published by the U.S. Census of urbanized areas available 1 year before the State DOT Baseline Performance Period Report is due to FHWA. As a result of this revision, § 490.105(e)(8)(iii)(D) and (f)(5)(iii)(D) are revised in the final rule. As for computing the Annual Hours of Peak Hour Excessive Delay Per Capita in section 490.713(b), FHWA revises section 490.709(g) to state that the most recent annual population reported by the U.S. Census, at the time when the State DOT Biennial Performance Period is due to FHWA.

Discussion Section 490.709(h)— Population and Nonattainment and Maintenance Area Data Requirements for Both Traffic Congestion Measures

The FHWA revises section 490.709(h) in the final rule to be consistent with the revised section 490.807(c), which includes the language that nonattainment and maintenance areas will be revised if changes to the designations made by EPA are effective 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA. As discussed in section 490.101 maintenance areas that have reached the end of their 20-year maintenance period will not be subject to the requirements of this subpart.

Discussion Section of § 490.711 Calculation of Traffic Congestion Metrics

The FHWA revised the metric for the Peak Hour Excessive Delay per capita measure to be a reflection of person hours of delay instead of vehicle hours of delay as proposed in the NPRM. The new metric, Total Peak Hour Excessive Delay (person-hours), is calculated for each reporting segment and reported annually to FHWA. There is no metric required for the Percent non-SOV travel

measure as segment level data is not available for this measure.

The FHWA revises section 490.711(b)(1) for the peak period to include 9:00 to 10:00 a.m. and to provide flexibility to State DOTs and MPOs to add a fourth hour (either 3:00 to 4:00 p.m. or 7:00 to 8:00 p.m.) for the afternoon peak period consistent with the changes made to section 490.705. The FHWA provides flexibility within the 6:00 a.m. to 8:00 p.m. time period to be consistent with the dataset used in the reliability measure under § 490.103.

The FHWA changed the length of the NPMRDS time bins from 5 minutes to 15 minutes. This also changed the maximum travel time segment delay from 300 seconds to 900 seconds. The hourly volume is thus divided by four instead of 12.

The FHWA revised section 490.711(e) to express the PHED in person-hours of delay by incorporating average vehicle occupancy (AVO) into the calculation of the delay metric. To incorporate AVO into the metric, State DOTs will refer to either the AVO information for cars, buses, and trucks provided by FHWA or their own AVO information along with information about the percentage of cars, buses, and trucks as a share of total AADT to calculate a weighted AVO. This weighted AVO will then be multiplied by the vehicle-hours of excessive delay to establish the total person-hours of excessive delay. The FHWA recognizes the variations in AVO among and within urbanized areas and the challenges in obtaining segment-level AVOs. The FHWA will provide AVO for cars, trucks, and on-road bus transit for applicable urbanized areas. The FHWA also recognizes that urbanized areas may have more specific AVO data and thus, provides flexibility for State DOTs and MPOs to substitute these data.

Discussion Section of § 490.713 Calculation of Traffic Congestion Measures

Section 490.713(a) has been revised to more clearly identify that State DOTs and MPOs will calculate measures in this section for the purpose of carrying out the traffic congestion related performance requirements of part 490 and that FHWA will calculate measures in this section for the purpose of reporting on PHED performance.

The method to calculate the Excessive Delay per capita measure proposed in the NPRM has been retained in the final rule for the PHED per capita measure as the changes to limit to peak hours and account for all travelers are contained within the metric calculation discussed in the section 490.711. The measure is

calculated by summing the hours of excessive delay experienced by all travelers on all reporting segments by the most recent annual population estimate published by the U.S. Census for the applicable area.

The FHWA revises the final rule to include a measure of non-SOV mode share, providing flexibility for State DOTs and MPOs to choose between three options for calculating this measure. When employing the option using ACS data to calculate the percent non-SOV travel, State DOTs and MPOs calculate the measure by subtracting the estimated percent SOV from 100 percent. When employing the option using data derived from local surveys, State DOTs and MPOs will report the results of their calculations (as a percent of non-SOV travel). When employing the option using data derived from system use measurements to calculate percent non-SOV travel, State DOTs and MPOs will divide the non-SOV volume by total volume, where non-SOV volume includes travel modes other than driving alone in a motorized vehicle, including travel avoided by teleworking.

In addition, in recognition of expected improvements in the ability to accurately measure multimodal travel, FHWA plans to revisit this measure after the completion of FHWA's multimodal research study in Fall 2018.

E. Subpart H—National Performance Measure for the CMAQ Program—On Road Mobile Source Emissions

Discussion Section of § 490.803 Applicability

The performance measure is applicable to all States and MPOs with projects financed with funds from the 23 U.S.C. 149 CMAQ program apportioned to State DOTs for areas designated as nonattainment or maintenance for ozone (O₃), carbon monoxide (CO), or particulate matter (PM).

Discussion Section of § 490.805 Definitions

The proposed definitions of “donut area” and “isolated rural nonattainment and maintenance areas” were removed because those terms do not appear in the final regulation.

Discussion Section of § 490.809 Data Requirements

Section 490.809(c) was revised to specify that the baseline nonattainment and maintenance area designations should be based on area status one year before the date that the State DOT Baseline Performance Period Report is

due to FHWA, which means as of October 1, 2017, for the first State DOT Baseline Performance Period Report. The FHWA also revised the language in section 490.809(c) so that the nonattainment and maintenance areas will be revised if an area is no longer nonattainment or maintenance for any pollutant in section 490.803. This determination will be based on area status 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA.

Discussion Section of § 490.811 Calculation of Emissions Metric

Section 490.811 as proposed in the NPRM was removed in response to comments.

Discussion Section of Former § 490.813 Calculation of Emissions Measure

Section 490.813 in the NPRM has been renumbered as § 490.811 in the final rule, due to the deletion of proposed § 490.811 regarding an emissions metric. The section was also revised due to the removal of the emissions metric as that resulted in a change in the units for the emissions measure in this section.

VII. Rulemaking Analyses and Notices

The FHWA considered all comments received before the close of business on the comment closing date indicated above. The comments are available for examination in the docket FHWA–2013–0054 at www.regulations.gov.

A. Rulemaking Analysis and Notices Executive Order 12866 (Regulatory Planning and Review), Executive Order 13563 (Improving Regulation and Regulatory Review), and DOT Regulatory Policies and Procedures

The FHWA has determined that this action is a significant regulatory action within the meaning of Executive Order (E.O.) 12866 and within the meaning of DOT regulatory policies and procedures due to the significant public interest in regulations related to performance management. It is anticipated that the economic impact of this rulemaking will not be economically significant within the meaning of E.O. 12866 as discussed below. This action complies with E.O.s 12866 and 13563 to improve regulation. This action is considered significant because of widespread public interest in the transformation of the Federal-aid highway program to be performance-based, although it is not economically significant within the meaning of E.O. 12866. The FHWA is presenting an RIA (or regulatory impact analysis) in support of the final rule on Assessing Performance of the National Highway

System, Freight Movement on the Interstate System, and Congestion Mitigation and Air Quality Improvement Program. The RIA evaluates the economic impact, in terms of costs and benefits, on Federal, State, and local governments, as well as private entities regulated under this action, as required by E.O. 12866 and E.O. 13563. However, the RIA did not attempt to directly quantify the changes from the improved decisionmaking. The estimated costs are measured on an incremental basis, relative to current NHS performance, freight movement, and traffic congestion and emissions reporting practices.

The RIA estimated costs and benefits resulting from the final rule in order to inform policymakers and the public of its relative value. The complete RIA may be accessed from the docket (docket number FHWA–2013–0054).

The cornerstone of MAP–21's highway program transformation is the transition to a performance-based program. In accordance with the law, State DOTs will invest resources in projects to achieve performance targets that make progress toward national goal

areas. The MAP–21 establishes national performance goals for system reliability, freight movement and economic vitality, and environmental sustainability.

This final rule establishes performance measures to assess the following: System performance on the Interstate System and non-Interstate NHS for the purpose of carrying out the NHPP, freight movement on the Interstate, and traffic congestion and on-road mobile source emissions for the purpose of carrying out the CMAQ program. The three NHPP-related measures are (1) Percent of person-miles traveled on reliable Interstate System roadways, (2) Percent of person-miles traveled on reliable non-Interstate NHS roadways, and (3) Percent Change in Tailpipe CO₂ Emissions on the NHS from the Calendar Year 2017. The performance measure to assess freight movement on the Interstate is Weighted Percent of the Interstate System Mileage providing for Reliable Truck Travel Times. The three measures to assess the CMAQ program includes two measures for traffic congestion: (1) Annual Hours of Peak-Hour Excessive Delay Per Capita and (2) Percent of non-Single

Occupancy Vehicle (SOV) Travel—and one measure to assess on-road mobile source emissions—Total Emission Reductions for applicable criteria pollutants or precursors.

Estimated Cost of the Final Rule

To estimate costs, FHWA assessed the level of effort, expressed in labor hours and categories, and the capital needed to comply with each component of the final rule. Level of effort by labor category is monetized with loaded wage rates to estimate total costs.

Because there is some uncertainty regarding the availability of NPMRDS data for use by State DOTs and MPOs, FHWA estimated the cost of the final rule according to two scenarios. Under Scenario 1, FHWA assumes that it will provide State DOTs and MPOs with the required data from NPMRDS. Table 3 displays the total cost of the final rule under Scenario 1 for the 10-year study period (2017–2026). Total costs are estimated to be \$144.0 million undiscounted, \$106.4 million discounted at 7 percent, and \$125.5 million discounted at 3 percent.

TABLE 3—TOTAL COST OF THE FINAL RULE UNDER SCENARIO 1

Cost components	10-year total cost		
	Undiscounted	7%	3%

* Totals may not sum due to rounding.

The costs in Tables 3 and 4 assume a portion of the estimated 409 MPOs will establish their own targets, and the rest will adopt State DOT targets. It is assumed that State DOTs and MPOs serving Transportation Management Areas (TMA)⁷⁴ will use staff to establish performance targets. Conversely, it is assumed that MPOs not serving a TMA will agree to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT targets. Therefore, they will not incur any incremental costs. There are currently an estimated 201 MPOs

serving TMAs.⁷⁵ The FHWA made this assumption because larger MPOs may have more resources available to develop performance targets. The FHWA believes that this is a conservative estimate, as larger MPOs may elect not to establish their own targets for a variety of reasons, including resource availability.

The final rule's 10-year undiscounted cost (\$144.0 million in Scenario 1 and

\$205.5 million in Scenario 2, in 2014 dollars) decreased relative to the proposed rule (\$165.3 million in Scenario 1 and \$224.5 million in Scenario 2, in 2012 dollars). As discussed below, FHWA made a number of changes that affected cost.

General Updates

In the final rule RIA, FHWA updated all costs to 2014 dollars from the 2012 dollars used in the proposed rule RIA. In addition, FHWA updated labor costs to reflect current BLS data. These general updates increased the estimated cost of the final rule relative to the proposed rule.

The FHWA deferred the effective date from 2016 to 2017 and shortened the period of analysis from 11 years in the proposed rule to 10 years in the final rule. All costs that related to activities

⁷⁴ A TMA is an urbanized area having a population of over 200,000 or otherwise requested by the Governor and the MPO and officially designated by FHWA or FTA. 23 U.S.C. 134(k).

⁷⁵ The FHWA updated the estimated total number of MPOs to 409, which is less than the 420 MPOs used at the time that the NPRM was published. The estimated number of MPOs serving TMAs is now 201, less than the estimate of 210 in the NPRM. At the time the RIA was prepared for the NPRM, FHWA assumed that the 36 new urbanized areas resulting from the 2010 Census would have MPOs designated for them. In reality, some of the newly designated urbanized areas merged with existing MPOs, resulting in the designation of fewer new MPOs than expected.

that were scheduled to begin in 2016 under the NPRM will now begin in 2017, and costs are estimated for 10 years instead of 11 years to be consistent with the other two performance measure rulemaking RIAs. This reduction in the period of analysis led FHWA to remove the cost of the Initial Performance Report, which State DOTs have already submitted to the agency. Therefore, estimated costs of the final rule decreased relative to the proposed rule.

The FHWA also updated the estimated total number of MPOs to 409, which is less than the 420 MPOs used at the time that the NPRM was published. The estimated number of MPOs serving TMAs is now 201, less than the estimate of 210 in the NPRM. The number of non-TMA MPOs is 208, less than the estimate of 210 in the NPRM. At the time the RIA was prepared for the NPRM, FHWA assumed that the 36 new urbanized areas resulting from the 2010 Census would have MPOs designated for them. However, some of these newly designated urbanized areas merged with existing MPOs, resulting in the designation of fewer new MPOs than expected. The FHWA estimates that, on average, only the 201 larger MPOs serving TMAs will establish their own quantifiable performance targets. The FHWA also estimates that the 208 smaller MPOs serving non-TMAs will choose to agree to plan and program projects so that they contribute toward the accomplishment of State DOT NHS performance, freight movement, and traffic congestion and emissions condition-related performance targets. Therefore, only the 201 larger MPOs serving TMAs will incur costs to reprogram and upgrade their software to be able to perform calculations of the performance measures. The reduction in the number of MPOs decreased the estimated costs to comply with the requirements of the final rule relative to the proposed rule.

Other Updates

In the final rule, FHWA eliminated three of the proposed performance measures (one of the proposed freight measures for percent of the Interstate congested and merging two proposed peak-hour travel time measures under NHPP with proposed excessive delay measure under CMAQ Traffic Congestion into one measure under CMAQ). In addition, the final rule does not include one of the proposed performance metrics (On-Road Mobile Source Emissions). At the same time, the final rule created two new performance measures (Percent of Non-SOV Travel and Percent Change in

Tailpipe CO₂ Emissions on the NHS Compared to the Calendar Year 2017 Level). Additionally, in the RIA, FHWA adjusted estimates for level of effort and number of affected State DOTs and MPOs to be consistent with the final rule requirements. On balance, these changes reduced the total estimated cost of the final rule relative to the proposed rule.

Break-Even Analysis

Currently, State DOTs differ in the way they evaluate the performance of the NHS, freight movement, traffic congestion, and on-road mobile source emissions. These differences hinder accurate analysis at the national level. The final rulemaking will not only establish uniform performance measures, but also will establish processes that (1) State DOTs and MPOs use to report measures and establish performance targets and (2) FHWA uses to assess progress that State DOTs have made toward achieving targets.

Upon implementation, FHWA expects that the will rule will result in some significant benefits that are not easily monetized, but nonetheless deserve mention in this analysis. Specifically, the final rule will allow for more informed decisionmaking on traffic congestion-, freight-, and air-quality-related project, program, and policy choices. The final rule also will yield greater accountability because the MAP-21-mandated reporting will increase visibility and transparency. In addition the final rule will help focus the Federal-aid highway program on achieving balanced performance outcomes.

The expected benefits discussed above (*i.e.*, more informed decisionmaking, greater accountability, and the focus on making progress toward the national goal for infrastructure condition) will lead to an enhanced performance of the NHS due to reduced traffic congestion, improved freight movement, and reduced emissions. The benefits, while real and substantial, are difficult to forecast and monetize. Therefore, FHWA addresses this issue by using the break-even analysis method suggested by OMB Circular A-4. Break-even analyses calculate the threshold a specific variable must achieve in order for benefits to equal costs while holding every other variable in the analysis constant.

The FHWA identified four variables (or outcomes) for which to estimate break-even thresholds: (1) Number of passenger travel hours, (2) tons of transportation-related carbon dioxide emissions, (3) number of truck travel

hours, and (4) kilograms of on-road mobile source emissions, comprising volatile organic compounds, nitrogen oxide, particulate matter, and carbon monoxide. The FHWA selected these variables because it is reasonable to assume that the performance measures will influence each of these variables relative to current baseline levels.

After identifying these variables, FHWA combined the final rule costs associated with the performance measures that will influence each variable. The FHWA expects that implementation of four of the rule's performance measures (Percent of Person-Miles Traveled on the Interstate That Are Reliable, Percent of Person-Miles Traveled on the Non-Interstate NHS That Are Reliable, Annual Hours of Peak Hour Excessive Delay Per Capita, and Percent of Non-SOV Travel) will influence passenger travel hours. The FHWA expects that implementation of the performance measure for Percent Change in Tailpipe CO₂ Emissions on the NHS Compared to the Calendar Year 2017 Level will influence tons of carbon dioxide emissions. The FHWA expects that implementation of the performance measure for Truck Travel Time Reliability Index will influence number of truck travel hours. The FHWA expects that implementation of the performance measure for Total Emissions Reduction will influence kilograms of on-road mobile source emissions.

The FHWA chose to present two of the break-even variables (number of passenger travel hours and tons of carbon dioxide emissions) together because the performance measure expected to improve tons of carbon dioxide emissions, Percent Change in Tailpipe CO₂ Emissions on the NHS Compared to the Calendar Year 2017 Level, is one of three performance measures used to assess the performance of the Interstate System and the non-Interstate NHS for the purpose of carrying out the National Highway Performance Program (NHPP). The other two performance measures under NHPP are Percent of Person-Miles Traveled on the Interstate That Are Reliable and Percent of Person-Miles Traveled on the Non-Interstate NHS That Are Reliable, both of which are expected to influence passenger travel hours. In order to assess NHPP performance measures together, FHWA presents the break-even thresholds for these variables together. The remaining two performance measures included in the break-even analysis for number of passenger travel hours (Annual Hours of Peak Hour Excessive Delay Per Capita and Percent of Non-SOV Travel) assess

the CMAQ program but are expected to influence passenger travel hours.

Two variables (number of passenger travel hours and number of truck travel hours) are associated with performance measures whose costs differ under two scenarios feasible under the final rule; in Scenario 1, FHWA provides travel time data to State DOTs, in Scenario 2, State DOTs acquire the necessary data independently. To account for this, FHWA performed the break-even analyses twice for these two variables (*i.e.*, once using Scenario 1 costs, and a second time using Scenario 2 costs). The costs associated with the remaining two variables (tons of carbon dioxide emissions and kilograms of on-road mobile source emissions) do not change under Scenarios 1 and 2, therefore only one break-even threshold is calculated for each analysis. In all, FHWA presents six break-even thresholds: (1) Number of passenger travel hours under Scenario 1, (2) number of passenger travel hours under Scenario 2, (3) tons of carbon dioxide emissions, (4) number of truck travel hours under Scenario 1, (5) number of truck travel hours under Scenario 2, and (6) kilograms of on-road mobile source emissions.

For the break-even analyses associated with passenger travel hours

and tons of carbon dioxide emissions, FHWA summed the costs associated with the following final rule sections:

- Sections 490.103. Seventy-five percent of the total cost of complying with the data requirements;
- Section 490.105. Approximately 71 percent of the cost of establishing performance targets;
- Section 490.107. Approximately 71 percent of the cost of documenting and submitting a description of coordination between State DOTs and MPOs;
- Section 490.107. Approximately 71 percent of the cost of reporting performance targets;
- Section 490.107. Approximately 67 percent of the cost of preparing CMAQ performance plan;
- Section 490.107. Seventy-five percent of the cost of adjusting HPMS and processing data;
- Section 490.109. Cost of assessing significant progress for NHPP measures;
- Section 490.511. The cost of calculating the system performance metrics;
- Section 490.513. The cost of calculating the system performance management measures;
- Section 490.711. Cost of calculating the traffic congestion metric; and
- Section 490.713. Cost of calculating the traffic congestion measure.

Table 5 presents the savings in passenger travel hours and carbon dioxide emissions that the final rule under Scenario 1 would need to save in order to be cost-beneficial (*i.e.*, FHWA provides NPMRDS data to State DOTs). The results represent two break-even points: (1) The passenger car travel time (in hours) that will need to be saved in order to justify the costs, and (2) the amount of carbon dioxide emissions (in tons) that will need to be saved in order to justify the costs. The analysis shows that the final rule will need to result in the reduction of approximately 370,000 hours of passenger car travel time, or 3.7 million hours over 10 years, as well as 31,000 tons of carbon dioxide emissions, or 312,000 tons over 10 years. To provide context, private commuters in 471 urban areas across the United States experience 6.9 billion hours of travel delay per year.⁷⁶ The EPA data indicates that the transportation sector emitted approximately 1.74 billion tons of carbon dioxide in 2014.⁷⁷ As a result, the reduction represents a less than 0.01 percent decrease in the amount of travel delay per year for major U.S. urban areas and in the average annual amount of carbon dioxide emissions from the transportation sector.

TABLE 5—BREAK-EVEN ANALYSIS OF NHPP AND CMAQ TRAFFIC CONGESTION PERFORMANCE MEASURES UNDER SCENARIO 1

	Undiscounted 10-year costs	Average commuter value of time (\$ per hour)	Number of hours of travel that need to be reduced	Average annual number of hours of travel that need to be reduced
	a	b	c = a ÷ b	d = c ÷ 10
Passenger Travel Hours	\$86,069,537	\$23.42	3,674,733	367,473
	Undiscounted 10-year costs	Average emission ton cost (\$ per ton)	Number of emissions tons needed to be reduced	Average annual number of emissions tons needed to be reduced
Carbon dioxide emissions	\$13,906,452	\$44.53	312,302	31,230

Table 6 presents the results from the break-even analysis under Scenario 2 (*i.e.*, State DOTs independently acquire the necessary data). The results represent two break-even points: (1) The passenger car travel time (in hours) that will need to be saved in order to justify the costs, and (2) the amount of carbon

dioxide emissions (in tons) that will need to be saved in order to justify the costs. The analysis shows that the final rule will need to result in the reduction of approximately 560,000 hours annually, or 5.6 million hours over 10 years as well as 31,000 tons of carbon dioxide emissions, or 312,000 tons over

10 years. To provide context, private commuters in 471 urban areas across the United States experience 6.9 billion hours of travel delay per year.⁷⁸ The EPA data indicates that the transportation sector emitted approximately 1.74 billion tons of

⁷⁶ Texas A&M Transportation Institute, "2015 Urban Mobility Scorecard," 2014, Table 2, p. 25. <http://d2dtl5nnlppfr0r.cloudfront.net/tti.tamu.edu/documents/mobility-scorecard-2015.pdf>.

⁷⁷ In 2014, the transportation sector accounted for 1.74 billion tons of carbon dioxide emissions, according to the EPA's Greenhouse Gas Inventory Data Explorer.

⁷⁸ Texas A&M Transportation Institute, "2015 Urban Mobility Scorecard," 2014, Table 2, p. 25. <http://d2dtl5nnlppfr0r.cloudfront.net/tti.tamu.edu/documents/mobility-scorecard-2015.pdf>.

carbon dioxide in 2014.⁷⁹ As a result, the reduction represents a less than 0.01 percent decrease in the amount of travel

delay per year for major U.S. urban areas and in the average annual amount

of carbon dioxide emissions from the transportation sector.

TABLE 6—BREAK-EVEN ANALYSIS OF NHPP AND CMAQ TRAFFIC CONGESTION PERFORMANCE MEASURES UNDER SCENARIO 2

	Undiscounted 10-year costs	Average commuter value of time (\$ per hour)	Number of hours of travel that need to be reduced	Average annual number of hours of travel that need to be reduced
	a	b	c = a ÷ b	d = c ÷ 10
Passenger travel hours	\$132,201,018	\$23.42	5,644,314	564,431
	Undiscounted 10-year costs	Average emission ton cost (\$ per ton)	Total number of emissions tons that need to be reduced	Average annual number of emissions tons that need to be reduced
Carbon dioxide emissions	\$13,906,452	\$44.53	312,302	31,230

* Please refer to the Summary Report for details on the methodology used in the analysis.

Relative to the proposed rule, the thresholds for the NHS performance break-even analysis increased in the final rule. Specifically, under Scenario 1, the number of annual hours of reduction in passenger car travel time increased from approximately 350,000 in the proposed rule to approximately 370,000 in the final rule. Under Scenario 2, the number of annual hours of reduction in passenger car travel time increased from approximately 500,000 in the proposed rule to 560,000 in the final rule. The break-even points increased primarily due to the addition of the Percent of Non-SOV Travel performance measure. No break-even point was estimated for carbon dioxide emissions in the proposed rule stage because the relevant performance measure, Percent Change in Tailpipe CO₂ Emissions on the NHS Compared to

the Calendar Year 2017 Level, was added to the final rule.

For the break-even analyses associated with improving freight performance, the costs associated with the following final rule sections are summed together to estimate the total cost of provisions aimed at reducing freight congestion:

- Section 490.103. Twenty-five percent of the cost of obtaining data requirements;
- Section 490.105. Approximately 14 percent of the cost of establishing performance targets;
- Section 490.107. Approximately 14 percent of the cost of documenting and submitting a description of coordination between State DOTs and MPOs;
- Section 490.107. Approximately 14 percent of the cost of reporting performance targets;
- Section 490.107. Twenty-five percent of the cost of adjusting HPMS and processing data;

- Section 490.109. Cost of assessing significant progress for NHFP measure;
- Section 490.611. Cost of calculating freight movement metric; and
- Section 490.613. Cost of calculating freight movement measure.

Table 7 presents the results from the freight movement break-even analysis under Scenario 1. The results represent the freight travel time (in hours) that will need to be saved in order to justify the costs. The analysis shows that the final rule will need to result in the reduction of approximately 98,000 hours annually, or 982,000 hours over 10 years. To provide context, truck drivers in 498 urban areas across the United States experience 353 million hours of travel delay per year.⁸⁰ This reduction represents a 0.03 percent decrease in the amount of travel delay per year for major U.S. urban areas.

TABLE 7—BREAK-EVEN ANALYSIS OF NHFP PERFORMANCE MEASURE UNDER SCENARIO 1

Undiscounted 10-year costs	Average truck value of time (\$ per hour)	Number of hours of travel that need to be reduced	Average an- nual number of hours of travel that need to be reduced
A	B	c = a ÷ b	d = c ÷ 10
\$25,752,858	\$26.22	982,239	98,224

⁷⁹In 2014, the transportation sector accounted for 1.74 billion tons of carbon dioxide emissions, according to the EPA's Greenhouse Gas Inventory Data Explorer.

⁸⁰Texas A&M Transportation Institute, "TTI's 2012 Urban Mobility Report," 2011, Table 5, p. 43. <https://assets.documentcloud.org/documents/566377/2012-urban-mobility-report.pdf>.

Table 8 presents the results from the freight movement break-even analysis under Scenario 2 (*i.e.*, State DOTs independently acquire the necessary data). The results represent the freight travel time (in hours) that will need to

be saved in order to justify the costs. The analysis shows that the final rule will need to result in the reduction of approximately 157,000 hours annually, or 1.6 million hours over 10 years. To provide context, truck drivers in 498

urban areas across the United States experience 353 million hours of travel delay per year.⁸¹ This reduction represents a 0.04 percent decrease in the amount of travel delay per year for major U.S. urban areas.

TABLE 8—BREAK-EVEN ANALYSIS OF NHFP PERFORMANCE MEASURE UNDER SCENARIO 2

Undiscounted 10-year costs	Average truck value of time (\$ per hour)	Number of hours of travel that need to be reduced	Average annual number of hours of travel that need to be reduced
A	B	c = a ÷ b	d = c ÷ 10
\$41,130,019	\$26.22	1,568,738	156,874

* Please refer to the Summary Report for details on the methodology used in the analysis.

Relative to the proposed rule, the thresholds for the freight performance break-even analysis decreased in the final rule. Specifically, under Scenario 1, the number of annual hours of reduction in freight travel time decreased from approximately 140,000 in the proposed rule to 98,000 in the final rule. Under Scenario 2, the number of annual hours of reduction in freight travel time decreased from 250,000 in the proposed rule to 160,000 in the final rule. The break-even points decreased primarily due to the elimination of the Average Truck Speed performance measure.

For the break-even analysis associated with the performance measure for Total

Emissions Reduction, the costs associated with the following final rule sections are summed together to estimate the total cost of provisions aimed at reducing total emissions:

- Section 490.105. Approximately 14 percent of the cost of establishing performance targets;
- Section 490.107. Approximately 14 percent of the cost of documenting and submitting a description of coordination between State DOTs and MPOs;
- Section 490.107. Approximately 14 percent of the cost of reporting performance targets;
- Section 490.107. Approximately 33 percent of the cost of preparing CMAQ performance plan;

- Section 490.811. Cost of calculating emissions metric; and
- Section 490.813. Cost of calculating emissions measure.

Tables 9, 10, and 11 present the results from the total emissions break-even analysis. The costs associated with the Total Emissions Reduction performance measure are identical under Scenario 1 and Scenario 2 because State DOTs would not need data from NPMRDS. Therefore, FHWA presents one set of results. The results represent the amount of emissions (in kilograms) that will need to be reduced in order to justify the costs. To calculate the cost of a kilogram of emissions, the analysis used the following inputs:

TABLE 9—INPUTS FOR CALCULATING COST PER KILOGRAM OF EMISSIONS

Emission	Passenger consumption rate (grams per VMT)	Percentage of “emission kilogram“	Societal cost of emissions (\$ per long ton)	Weighted “emission kilogram“
	A	b = a ÷ Σa	C	d = b c
Volatile Organic Compound (VOC)	1.034	9.289	\$1.46	\$0.14
Nitrogen Oxide (NO _x)	0.693	6.226	5.96	0.37
Particulate Matter (PM _{2.5})	0.0041	0.037	325.88	0.12
Carbon Monoxide (CO)	9.4	84.448	0.00	0.00
Cost of an Emission Kilogram				0.63

Based on this cost per kilogram, the analysis shows that the final rule will need to result in the reduction of approximately 2.9 million kilograms annually, or 29.1 million kilograms over

10 years. To provide context, data from the EPA Office of Air Quality Planning and Standards indicate that highway vehicles emitted 2 billion kilograms of VOCs, 4.1 billion kilograms of NO_x, 0.2

billion kilograms of PM_{2.5}, and 20.2 billion kilograms CO in 2014.⁸² This reduction represents approximately 0.01 percent of total annual national emissions of these pollutants.

⁸¹ Texas A&M Transportation Institute, "TTI's 2012 Urban Mobility Report," 2011, Table 5, p. 43. <https://assets.documentcloud.org/documents/566377/2012-urban-mobility-report.pdf>.

⁸² EPA, "Air Pollutant Emissions Trends Data," Average Annual Emissions. <https://www.epa.gov/air-emissions-inventories/air-pollutant-emissions-trends-data>.

TABLE 10—BREAK-EVEN ANALYSIS OF TOTAL EMISSIONS REDUCTION PERFORMANCE MEASURE USING EMISSION KILOGRAM METRIC

Undiscounted 10-year costs	Average emission kilogram cost (\$ per long ton)	Number of emissions kilograms needed to be reduced	Average annual number of emissions kilograms needed to be reduced
a	B	c = a ÷ b	d = c ÷ 10
\$18,244,195	\$0.63	29,119,356	2,911,936

This amount was split into specific emissions reductions in volatile organic compounds, nitrogen oxide, particulate

matter 2.5, and carbon monoxide. Table 11 shows these reductions.

TABLE 11—CALCULATION OF AVERAGE ANNUAL REQUIRED EMISSIONS REDUCTION

Average annual number of emissions kilograms needed to be reduced	
VOC Kilograms	270,498
NO _x Kilograms	181,291
PM _{2.5} Kilograms	1,073
CO Kilograms	2,459,074
Total "Emission" Kilograms	2,911,936

Relative to the proposed rule, the thresholds for the total emissions break-even analysis decreased in the final rule. Specifically, the reduction in total emissions decreased from 4,400 emission tons (approximately 4 million kilograms⁸³) in the proposed rule to 2.9 million emission kilograms in the final rule. The break-even points decreased primarily due to the elimination of the performance metric for on-road mobile source emissions.

Responses to Public Comments on the NPRM's Regulatory Impact Analysis

A number of State DOTs, MPOs, and other organizations provided comments on the regulatory impact analysis for the NPRM.⁸⁴ In terms of benefits, the Association for Commuter Transportation, an advocacy group, expressed support and asserted that the costs of the rule are minimal relative to the planning process used to determine how to spend nearly \$50 billion a year.

The Michigan and Montana DOTs and Sarasota/Manatee MPO claimed that the costs of the rule do not justify the

benefits. As described in Section 5 of the RIA, FHWA believes that the final rule will result in many benefits (both qualitative and quantitative). Through five break-even analyses, FHWA demonstrates the levels of change needed to justify the costs of the rule. The full analysis is available in the docket of this final rulemaking.

The AMPO asserted that the rule will require MPOs to adjust current operations to accommodate new roles and responsibilities. The final rule for Statewide and Nonmetropolitan Transportation Planning; Metropolitan Transportation Planning (Docket No. FHWA–2013–0037) accounts for activities unique to this planning process, including specific items suggested by this commenter. The FHWA considered the new roles and responsibilities MPOs would face under the final rule, separately from costs related to the planning process so as not to double count effort, and estimated the associated costs in this final rule's RIA. For a detailed description of the analysis, see Section 4 of the RIA found in the docket of this rulemaking.

The Denver Regional Council of Governments and the New York Metropolitan Transportation Council suggested that FHWA underestimated the costs of the rule. Under the final rule, MPOs are not required to provide separate reporting to FHWA, but must agree on a reporting process with State DOTs and report certain requirements to the State. The final rule for Statewide

and Nonmetropolitan Transportation Planning; Metropolitan Transportation Planning (Docket No. FHWA–2013–0037) accounts for activities unique to this planning process. The FHWA, however, has estimated the costs for State DOTs and MPOs to prepare and submit reports as well as the costs of all other provisions specific to this final rule. For a detailed analysis, see Section 4 of the RIA.

Two commenters questioned FHWA's estimate of the cost of data requirements. The Oregon Department of Transportation and the Washington State Department of Transportation requested more details from FHWA on the costs of obtaining NPMRDS if FHWA does not provide the data to State DOTs. Due to uncertainty regarding the long-term funding of NPMRDS, FHWA estimated the costs of this rule under two scenarios: One in which NPMRDS data are made available to State DOTs and another in which State DOTs must acquire their own data. Based on interviews with Federal and State DOT SMEs, FHWA confirmed that the data required for calculating performance metrics and measures are readily accessible from the NPMRDS or equivalent data sources. Use of NPMRDS or other data sources would constitute an incremental burden on State DOTs in the form of sharing data, training staff, acquiring and processing data, and other processes. The level of this burden would depend on each individual State DOT's existing level of

⁸³ Using a conversion rate of 1 U.S. ton = 907.185 kilograms.

⁸⁴ Association of Metropolitan Planning Organizations, Denver Regional Council of Governments, Association for Commuter Transportation, Michigan Department of Transportation, Montana Department of Transportation, New York Metropolitan Transportation Council, Oregon Department of Transportation, Sarasota/Manatee Metropolitan Planning Organization, Washington State Department of Transportation.

sophistication in current roadway traffic data analysis. For a detailed analysis, see Section 4 of the RIA.

B. Regulatory Flexibility Act

In compliance with the Regulatory Flexibility Act (Pub. L. 96–354, 5 U.S.C. 601–612), FHWA has evaluated the effects of this action on small entities and has determined that the action would not have a significant economic impact on a substantial number of small entities. The final rule addresses the obligation of Federal funds to State DOTs for Federal-aid highway projects. The rule affects two types of entities: State governments and MPOs. State governments do not meet the definition of a small entity under 5 U.S.C. 601, which have a population of less than 50,000.

The MPOs are considered governmental jurisdictions, and to qualify as a small entity they would need to serve less than 50,000 people. The MPOs serve urbanized areas with populations of 50,000 or more. As discussed in the RIA, the rule is expected to impose costs on MPOs that serve populations exceeding 200,000. Therefore, the MPOs that incur economic impacts under this proposed rule do not meet the definition of a small entity.

I hereby certify that this regulatory action would not have a significant impact on a substantial number of small entities.

C. Unfunded Mandates Reform Act of 1995

The FHWA has determined that this action does not impose unfunded mandates as defined by the Unfunded Mandates Reform Act of 1995 (Pub. L. 104–4, March 22, 1995, 109 Stat. 48). This rule does not include a Federal mandate that may result in expenditures of \$151 million or more in any 1 year (when adjusted for inflation) in 2012 dollars for either State, local, and tribal governments in the aggregate, or by the private sector. Additionally, the definition of “Federal mandate” in the Unfunded Mandates Reform Act excludes financial assistance of the type in which State, local, or tribal governments have authority to adjust their participation in the program in accordance with changes made in the program by the Federal Government. The Federal-aid highway program permits this type of flexibility.

D. Executive Order 13132 (Federalism Assessment)

The FHWA has analyzed this action in accordance with the principles and criteria contained in Executive Order

13132. The FHWA has determined that this action does not have sufficient federalism implications to warrant the preparation of a federalism assessment. The FHWA has also determined that this action does not preempt any State law or State regulation or affect the States’ ability to discharge traditional State governmental functions.

E. Executive Order 12372 (Intergovernmental Review)

The regulations implementing Executive Order 12372 regarding intergovernmental consultation on Federal programs and activities apply to this program. Local entities should refer to the Catalog of Federal Domestic Assistance Program Number 20.205, Highway Planning and Construction, for further information.

F. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA) (44 U.S.C. 3501, *et seq.*), Federal agencies must obtain approval from the OMB for each collection of information they conduct, sponsor, or require through regulations. The DOT has analyzed this action under the PRA and has determined that this rulemaking contains collection of information requirements for the purposes of the PRA.

This rule provides definitions and outlines processes for performance elements of this final rule. Some burdens in this rule would be realized in other reporting areas as described below. The PRA activities that are already covered by existing OMB Clearances have reference numbers for those clearances as follows: HPMS information collection, OMB No. 2125–0028 with an expiration of May 2019 and CMAQ Program OMB 2125–0614 with an expiration date of August 2018. Any increase in PRA burdens caused by MAP–21 and the FAST Act in these areas will be addressed in PRA approval requests associated with those rulemakings.

This rulemaking requires the submittal of performance reports. The DOT has analyzed this final rule under the PRA and has determined the following:

Respondents: Approximately 262 applicants consisting of State DOTs and MPOs.

Frequency: Biennially.

Estimated Average Burden per

Response: Approximately 416 hours to complete and submit the report.

Estimated Total Annual Burden

Hours: Approximately 65,312 hours annually.

G. National Environmental Policy Act

The FHWA has analyzed this action for the purpose of the National Environmental Policy Act of 1969, as amended (42 U.S.C. 4321 *et seq.*), and has determined that this action would not have any effect on the quality of the environment and meets the criteria for the categorical exclusion at 23 CFR 771.117(c)(20).

H. Executive Order 12630 (Taking of Private Property)

The FHWA has analyzed this action under Executive Order 12630, Governmental Actions and Interference with Constitutionally Protected Property Rights. The FHWA does not anticipate that this action would affect a taking of private property or otherwise have taking implications under Executive Order 12630.

I. Executive Order 12988 (Civil Justice Reform)

This action meets applicable standards in sections 3(a) and 3(b)(2) of Executive Order 12988, Civil Justice Reform, to minimize litigation, eliminate ambiguity, and reduce burden.

J. Executive Order 13045 (Protection of Children)

We have analyzed this rule under Executive Order 13045, Protection of Children from Environmental Health Risks and Safety Risks. The FHWA certifies that this action would not cause an environmental risk to health or safety that might disproportionately affect children.

K. Executive Order 13175 (Tribal Consultation)

The FHWA has analyzed this action under Executive Order 13175, dated November 6, 2000, and believes that the action would not have substantial direct effects on one or more Indian tribes; would not impose substantial direct compliance costs on Indian tribal governments; and would not preempt tribal laws. The rulemaking addresses obligations of Federal funds to State DOTs for Federal-aid highway projects and would not impose any direct compliance requirements on Indian tribal governments. Therefore, a tribal summary impact statement is not required.

L. Executive Order 13211 (Energy Effects)

The FHWA has analyzed this action under Executive Order 13211, Actions Concerning Regulations That Significantly Affect Energy Supply, Distribution, or Use. The FHWA has

determined that this is not a significant energy action under that order and is not likely to have a significant adverse effect on the supply, distribution, or use of energy. Therefore, a Statement of Energy Effects is not required.

*M. Executive Order 12898
(Environmental Justice)*

The E.O. 12898 requires that each Federal agency make achieving environmental justice part of its mission by identifying and addressing, as appropriate, disproportionately high and adverse human health or environmental effects of its programs, policies, and activities on minorities and low-income populations. The FHWA has determined that this rule does not raise any environmental justice issues.

N. Privacy Impact Assessment

The FHWA continues to assess the privacy impacts of this rule as required by section 522(a)(5) of the FY 2005 Omnibus Appropriations Act, Public Law 108-447, 118 Stat. 3268 (December 8, 2004) [set out as a note to 5 U.S.C. 552a].

The FHWA has selected the use of the new NPMRDS as the data source to calculate the metrics for the travel time/speed based measures to ensure consistency and coverage at a national level. This private sector data set provides average travel times derived from vehicle/passenger probe data traveling on the NHS. The FHWA recognizes that probe data is an evolving field and we will continue to evaluate the privacy risks associated with its use.

O. Regulation Identifier Number

An RIN is assigned to each regulatory action listed in the Unified Agenda of Federal Regulations. The Regulatory Information Service Center publishes the Unified Agenda in April and October of each year. The RIN number contained in the heading of this document can be used to cross-reference this action with the Unified Agenda.

List of Subjects in 23 CFR Part 490

Bridges, Highway safety, Highways and roads, Incorporation by reference, Reporting and recordkeeping requirements.

Issued in Washington, DC, on January 9, 2017, under authority delegated in 49 CFR 1.85.

Gregory G. Nadeau,
Administrator, Federal Highway Administration.

In consideration of the foregoing, FHWA amends 23 CFR part 490 as follows:

**PART 490—NATIONAL
PERFORMANCE MANAGEMENT
MEASURES**

■ 1. The authority citation for part 490 continues to read as follows:

Authority: 23 U.S.C. 134, 135, 148(i), and 150; 49 CFR 1.85.

■ 2. Revise subpart A to read as follows:

Subpart A—General Information

Sec.

490.101 Definitions.

490.103 Data requirements.

490.105 Establishment of performance targets.

490.107 Reporting on performance targets.

490.109 Assessing significant progress toward achieving the performance targets for the National Highway Performance Program and the National Highway Freight Program.

490.111 Incorporation by reference.

§ 490.101 Definitions.

Unless otherwise specified, the following definitions apply to this part:
American Community Survey (ACS) is a national level ongoing survey from the U.S. Census Bureau that includes data on jobs, occupations, educational attainment, transportation patterns, and other topics of the Nation's population.

Attainment area as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

Bridge as used in this part is defined in § 650.305 of this chapter, the National Bridge Inspection Standards.

Criteria pollutant is any pollutant for which there is established a NAAQS at 40 CFR part 50. The transportation related criteria pollutants per 40 CFR 93.102(b)(1) are carbon monoxide, nitrogen dioxide, ozone, and particulate matter (PM₁₀ and PM_{2.5}).

Full extent means continuous collection and evaluation of pavement condition data over the entire length of the roadway.

Highway Performance Monitoring System (HPMS) is a national level highway information system that includes data on the extent, condition, performance, use, and operating characteristics of the Nation's highways.

Mainline highways means the through travel lanes of any highway. Mainline highways specifically exclude ramps, shoulders, turn lanes, crossovers, rest areas, and other pavement surfaces that are not part of the roadway normally traveled by through traffic.

Maintenance area as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions. For the

purposes of this part, areas that have reached the end of their 20-year maintenance period¹ are not considered as maintenance areas.

Measure means an expression based on a metric that is used to establish targets and to assess progress toward achieving the established targets (e.g., a measure for flight on-time performance is percent of flights that arrive on time, and a corresponding metric is an arithmetic difference between scheduled and actual arrival time for each flight).

Metric means a quantifiable indicator of performance or condition.

Metropolitan Planning Organization (MPO) as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

Metropolitan Planning Area as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

National Ambient Air Quality Standards (NAAQS) as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

National Bridge Inventory (NBI) is an FHWA database containing bridge information and inspection data for all highway bridges on public roads, on and off Federal-aid highways, including tribally owned and federally owned bridges, that are subject to the National Bridge Inspection Standards (NBIS).

National Performance Management Research Data Set (NPMRDS) means a data set derived from vehicle/passenger probe data (sourced from Global Positioning Station (GPS), navigation units, cell phones) that includes average travel times representative of all traffic on each mainline highway segment of the National Highway System (NHS), and additional travel times representative of freight trucks for those segments that are on the Interstate System. The data set includes records that contain average travel times for every 15 minutes of every day (24 hours) of the year recorded and calculated for every travel time segment where probe data are available. The NPMRDS does not include any imputed travel time data.

Nonattainment area as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

¹ The maintenance period in CAA Section 175A (42 U.S.C. 7505a) requires the submittal of two maintenance plans totaling 20 years, unless the applicable implementation plan specifies a longer maintenance period. The end of the maintenance period is 20-years from the effective date of the re-designation to attainment and approval of the first 10-year maintenance plan.

Non-SOV travel is defined as any travel mode other than driving alone in a motorized vehicle (*i.e.*, single occupancy vehicle or SOV travel), including travel avoided by telecommuting.

Non-urbanized area means a single geographic area that comprises all of the areas in the State that are not “urbanized areas” under 23 U.S.C. 101(a)(34).

Performance period means a determined time period during which condition/performance is measured and evaluated to: Assess condition/performance with respect to baseline condition/performance; and track progress toward the achievement of the targets that represent the intended condition/performance level at the midpoint and at the end of that time period. The term “performance period” applies to all measures in this part, except the measures for the Highway Safety Improvement Program (HSIP) in subpart B of this part. Each performance period covers a 4-year duration beginning on a specified date (provided in § 490.105).

Reporting segment means the length of roadway that the State Department of Transportation (DOT) and MPOs define for metric calculation and reporting and is comprised of one or more travel time segments.

Target means a quantifiable level of performance or condition, expressed as a value for the measure, to be achieved within a time period required by the Federal Highway Administration (FHWA).

Transportation Management Area (TMA) as used in this part is defined in § 450.104 of this chapter, Transportation Planning and Programming Definitions.

Travel time data set means either the NPMRDS or an equivalent data set that is used by State DOTs and MPOs as approved by FHWA, to carry out the requirements in subparts E, F, and G of this part.

Travel time reliability means the consistency or dependability of travel times from day to day or across different times of the day.

Travel time segment means a contiguous stretch of the NHS for which average travel time data are summarized in the travel time data set.

Truck freight bottleneck, as used in this part, is defined as a segment of roadway identified by the State DOT as having constraints that cause a significant impact on freight mobility and reliability. Bottlenecks may include highway sections that do not meet thresholds for freight reliability identified in § 490.613 or other locations identified by the State DOT. Causes may

include recurring congestion, causing delays in freight movement, or roadway features that impact truck movements, such as steep grades, substandard vertical or horizontal clearances, weight restrictions, delays at border crossings or terminals, or truck operating restrictions.

§ 490.103 Data requirements.

(a) *In general.* Unless otherwise noted in paragraphs (b) through (g) of this section, the data requirements in this section apply to the measures identified in subparts C through H of this part. Additional data requirements for specific performance management measures are identified in 23 CFR sections—

- (1) 490.309 for the condition of pavements on the Interstate System;
- (2) 490.309 for the condition of pavements on the non-Interstate NHS;
- (3) 490.409 for the condition of bridges on the NHS;
- (4) 490.509 for the performance of the Interstate System;
- (5) 490.509 for the performance of the non-Interstate NHS;
- (6) 490.609 for the freight movement on the Interstate System;
- (7) 490.709 for traffic congestion; and
- (8) 490.809 for on-road mobile source emissions.

(b) *Urbanized area data.* The State DOTs shall submit urbanized area data, including boundaries of urbanized areas, in accordance with the HPMS Field Manual for the purpose of the additional targets for urbanized and non-urbanized areas in § 490.105(e) and establishing and reporting on targets for the CMAQ Traffic Congestion measures in § 490.707. The boundaries of urbanized areas shall be identified based on the most recent U.S. Decennial Census, unless FHWA approves adjustments to the urbanized area as provided by 23 U.S.C. 101(a)(34) and these adjustments are submitted to HPMS.

(c) *Nonattainment and maintenance areas data.* The State DOTs shall use the nonattainment and maintenance areas boundaries based on the effective date of U.S. Environmental Protection Agency (EPA) designations in 40 CFR part 81.

(d) *National Highway System data.* The State DOTs shall document and submit the extent of the NHS in accordance with the HPMS Field Manual.

(e) *Travel time data set.* Travel time data needed to calculate the measures in subparts E, F, and G of this part will come from the NPMRDS, unless the State DOT requests, and FHWA approves, the use of an equivalent data

source(s) that meets the requirements of this section. The State DOT shall establish, in coordination with applicable MPOs, a single travel time data set (*i.e.*, NPMRDS or equivalent data set) that will be used to calculate the annual metrics in subparts E, F, and G of this part. The same data source shall be used for each calendar year. A State DOT and MPO(s) must use the same travel time data set for each reporting segment for the purposes of calculating the metrics and measures. The use of equivalent data source(s) shall comply with the following:

(1) State DOTs and MPOs shall use the same equivalent data source(s) for a calendar year;

(2) The State DOT shall request FHWA approval for the use of such equivalent data source(s) no later than October 1st before the beginning of the calendar year in which the data source would be used to calculate metrics and FHWA must approve the use of that data source prior to a State DOT and MPO(s)’s implementation and use of that data source;

(3) The State DOT shall make the equivalent data source(s) available to FHWA, on request;

(4) The State DOT shall maintain and use a documented data quality plan to routinely check the quality and accuracy of data contained within the equivalent data source(s); and

(5) If approved by FHWA, the equivalent data source(s) shall:

- (i) Be used by both the State DOT and all MPOs within the State for all applicable travel time segments and be referenced by HPMS location referencing standards; and
- (ii) In combination with or in place of NPMRDS data, include:

(A) Contiguous segments that cover the mainline highways full NHS, as defined in 23 U.S.C. 103, within the State and MPO boundary; and

(B) Average travel times for at least the same number of 15 minute intervals and the same locations that would be available in the NPMRDS;

(iii) Be populated with observed measured vehicle travel times and shall not be populated with travel times derived from imputed (historic travel times or other estimates) methods. Segment travel times may be derived from travel times reported over a longer time period of measurement (path processing or equivalent);

(iv) Include, for each segment at 15 minute intervals throughout the time periods specified in paragraphs (e)(5)(iv)(A) and (B) of this section for each day of the year, the average travel time, recorded to the nearest second,

representative of at least one of the following:

(A) All traffic on each segment of the NHS (24 hours on Interstate; 6 a.m. to 8 p.m. for non-Interstate NHS); or

(B) Freight vehicle traffic on each segment of the Interstate System (24 hours);

(v) Include, for each segment, a recording of the time and date of each 15 minute travel time record;

(vi) Include the location (route, functional class, direction, State), length and begin and end points of each segment; and

(vii) Be available within 60 days of measurement.

(f) *Reporting segments.* State DOTs, in coordination with MPOs, shall define a single set of reporting segments of the Interstate System and non-Interstate NHS for the purpose of calculating the travel time-based measures specified in §§ 490.507, 490.607, and 490.707 in accordance with the following:

(1) Reporting segments shall be comprised of one or more contiguous Travel Time Segments of same travel direction. State DOTs have the option to accept the Travel Time Segments in the NPMRDS as the reporting segments;

(2) Reporting segments shall not exceed 1 mile in length in urbanized areas unless an individual Travel Time Segment is longer and 10 miles in length in non-urbanized areas unless an individual Travel Time Segment is longer;

(3) All reporting segments collectively shall be contiguous and cover the full extent of the directional mainline highways of the Interstate System and non-Interstate NHS required for reporting the measure; and

(4) The State DOT and applicable MPOs shall document, in manner that mutually agreed upon by all relevant parties, the coordination and agreement on the travel time data set and the defined reporting segments.

(g) *Posted speed limit.* State DOTs are encouraged to report the posted speed limits for the full extent of the NHS in their State via HPMS (HPMS Data Item "Speed_Limit").

§ 490.105 Establishment of performance targets.

(a) *In general.* State DOTs shall establish performance targets for all measures specified in paragraph (c) of this section for the respective target scope identified in paragraph (d) of this section with the requirements specified in paragraph (e) of this section. The MPOs shall establish performance targets for all measures specified in paragraph (c) of this section for respective target scope identified in

paragraph (d) of this section with the requirements specified in paragraph (f) of this section.

(b) *Highway Safety Improvement Program measures.* State DOTs and MPOs shall establish performance targets for the Highway Safety Improvement Program (HSIP) measures in accordance with § 490.209.

(c) *Applicable measures.* State DOTs and MPOs that include, within their respective geographic boundaries, any portion of the applicable transportation network or area shall establish performance targets for the performance measures identified in 23 CFR sections—

(1) 490.307(a)(1) and (2) for the condition of pavements on the Interstate System;

(2) 490.307(a)(3) and (4) for the condition of pavements on the NHS (excluding the Interstate);

(3) 490.407(c)(1) and (2) for the condition of bridges on the NHS;

(4) 490.507(a)(1) and (2) for the NHS Travel Time Reliability;

(5) 490.507(b) for the greenhouse gas (GHG) performance for the NHS;

(6) 490.607 for the freight movement on the Interstate System;

(7) 490.707(a) and (b) for traffic congestion; and

(8) 490.807 for on-road mobile source emissions.

(d) *Target scope.* Targets established by State DOTs and MPOs shall, regardless of ownership, represent the transportation network or geographic area, including bridges that cross State borders, that are applicable to the measures as specified in paragraphs (d)(1) and (2) of this section.

(1) State DOTs and MPOs shall establish statewide and metropolitan planning area wide targets, respectively, that represent the condition/performance of the transportation network or geographic area that are applicable to the measures, as specified in 23 CFR sections—

(i) 490.303 for the condition of pavements on the Interstate System measures specified in § 490.307(a)(1) and (2);

(ii) 490.303 for the condition of pavements on the NHS (excluding the Interstate) measures specified in § 490.307(a)(3) and (4);

(iii) 490.403 for the condition of bridges on the NHS measures specified in § 490.407(c)(1) and (2);

(iv) 490.503(a)(1) for the Travel Time Reliability measures specified in § 490.507(a)(1) and (2);

(v) 490.503(b) for the GHG measure for the NHS specified in § 490.507(b);

(vi) 490.603 for the Freight Reliability measure specified in § 490.607; and

(vii) 490.803 for the Total Emissions Reduction measure identified in § 490.807.

(2) State DOTs and MPOs shall establish a single urbanized area target that represents the performance of the transportation network in each applicable area for the CMAQ Traffic Congestion measures, as specified in § 490.703.

(3) For the purpose of target establishment in this section and reporting targets and progress evaluation in § 490.107, State DOTs shall describe the urbanized area boundaries within the State boundary in the Baseline Performance Period Report required by § 490.107(b)(1).

(e) *Establishment.* State DOTs shall establish targets for each of the performance measures identified in paragraph (c) of this section for respective target scope identified in paragraph (d) of this section as follows:

(1) *Schedule.* State DOTs shall establish targets not later than February 20, 2018, and for each performance period thereafter, in a manner that allows for the time needed to meet the requirements specified in this section and so that the final targets are submitted to FHWA by the due date provided in § 490.107(b).

(2) *Coordination.* State DOTs shall coordinate with relevant MPOs on the selection of targets in accordance with 23 U.S.C. 135(d)(2)(B)(i)(II) to ensure consistency, to the maximum extent practicable.

(3) *Additional targets for urbanized and non-urbanized areas.* In addition to statewide targets, described in paragraph (d)(1) of this section, State DOTs may, as appropriate, for each statewide target establish additional targets for portions of the State.

(i) State DOTs shall describe in the Baseline Performance Period Report required by § 490.107(b)(1) the boundaries used to establish each additional target.

(ii) State DOTs may select any number and combination of urbanized area boundaries and may also select a non-urbanized area boundary for the establishment of additional targets.

(iii) The boundaries used by the State DOT for additional targets shall be contained within the geographic boundary of the State.

(iv) State DOTs shall evaluate separately the progress of each additional target and report that progress as required under § 490.107(b)(2)(ii)(B) and (b)(3)(ii)(B).

(v) Additional targets for urbanized areas and the non-urbanized area are not applicable to the CMAQ Traffic Congestion measures and the Total

Emissions Reduction measure in paragraphs (c)(7) and (8) of this section, respectively.

(4) *Time horizon for targets.* State DOTs shall establish targets for a performance period as follows:

(i) The performance period will begin on:

(A) January 1st of the year in which the Baseline Performance Period Report is due to FHWA and will extend for a duration of 4 years for the measures in paragraphs (c)(1) through (7) of this section; and

(B) October 1st of the year prior to which the Baseline Performance Report is due to FHWA and will extend for a duration of 4 years for the measure in paragraph (c)(8) of this section.

(ii) The midpoint of a performance period will occur 2 years after the beginning of a performance period described in paragraph (e)(4)(i) of this section.

(iii) Except as provided in paragraphs (e)(7) and (e)(8)(v) of this section, State DOTs shall establish 2-year targets that reflect the anticipated condition/performance level at the midpoint of each performance period for the measures in paragraphs (c)(1) through (7) of this section, and the anticipated cumulative emissions reduction to be reported for the first 2 years of a performance period by applicable criteria pollutant and precursor for the measure in paragraph (c)(8) of this section.

(iv) State DOTs shall establish 4-year targets that reflect the anticipated condition/performance level at the end of each performance period for the measures in paragraphs (c)(1) through (7) of this section, and the anticipated cumulative emissions reduction to be reported for the entire performance period by applicable criteria pollutant and precursor for the measure in paragraph (c)(8) of this section.

(5) *Reporting.* State DOTs shall report 2-year targets, 4-year targets, the basis for each established target, progress made toward the achievement of targets, and other requirements to FHWA in accordance with § 490.107. State DOTs shall provide relevant MPO(s) targets to FHWA, upon request, each time the relevant MPOs establish or adjust MPO targets, as described in paragraph (f) of this section.

(6) *Target adjustment.* State DOTs may adjust an established 4-year target in the Mid Performance Period Progress Report, as described in § 490.107(b)(2). State DOTs shall coordinate with relevant MPOs when adjusting their 4-year target(s). Any adjustments made to 4-year targets established for the CMAQ Traffic Congestion measures in

paragraph (c)(7) of this section shall be agreed upon and made collectively by all State DOTs and MPOs that include any portion of the NHS in the respective urbanized area applicable to the measures.

(7) *Phase-in of new requirements for Interstate System pavement condition measures and the non-Interstate NHS Travel Time Reliability measures.* The following requirements apply only to the first performance period and to the measures in §§ 490.307(a)(1) and (2) and 490.507(a)(2):

(i) State DOTs shall establish their 4-year targets, required under paragraph (e)(4)(iv) of this section, and report these targets in their Baseline Performance Period Report, required under § 490.107(b)(1);

(ii) State DOTs shall not report 2-year targets, described in paragraph (e)(4)(iii) of this section, and baseline condition/performance in their Baseline Performance Period Report; and

(iii) State DOTs shall use the 2-year condition/performance in their Mid Performance Period Progress Report, described in § 490.107(b)(2)(ii)(A) as the baseline condition/performance. State DOTs may also adjust their 4-year targets, as appropriate.

(8) *Urbanized area specific targets.* The following requirements apply to establishing targets for the CMAQ Traffic Congestion measures in paragraph (c)(7) of this section, as their target scope provided in paragraph (d)(2) of this section:

(i) For the performance period that begins on January 1, 2018, State DOTs, with mainline highways on the NHS that cross any part of an urbanized area with a population more than 1 million within its geographic State boundary and that urbanized area contains any part of a nonattainment or maintenance area for any one of the criteria pollutants, as specified in § 490.703, shall establish targets for the CMAQ Traffic Congestion measures specified in § 490.707(a) and (b).

(ii) Beginning with the performance period that begins on January 1, 2022, and all subsequent performance periods thereafter, State DOTs, with mainline highways on the NHS that cross any part of an urbanized area with a population more than 200,000 within its geographic State boundary and that urbanized area contains any part of a nonattainment or maintenance area for any one of the criteria pollutants, as specified in § 490.703, shall establish targets for the CMAQ Traffic Congestion measures specified in § 490.707(a) and (b).

(iii) If required to establish targets for the CMAQ Traffic Congestion measures,

as described in paragraphs (e)(8)(i) and/or (ii) of this section, State DOTs shall comply with the following:

(A) For each urbanized area, only one 2-year target and one 4-year target for the entire urbanized area shall be established regardless of roadway ownership.

(B) For each urbanized area, all State DOTs and MPOs that contain, within their respective boundaries, any portion of the NHS network in that urbanized area shall agree on one 2-year and one 4-year target for that urbanized area. In accordance with paragraphs (e)(5) and (f)(9) of this section, the targets reported by the State DOTs and MPOs for that urbanized area shall be identical.

(C) Except as provided in paragraphs (e)(8)(iii)(F) and (e)(8)(v) of this section, State DOTs shall meet all reporting requirements in § 490.107 for the entire performance period even if there is a change of population, NHS designation, or nonattainment/maintenance area designation during that performance period.

(D) The 1 million and 200,000 population thresholds, in paragraphs (e)(8)(i) and (ii) of this section, shall be determined based on the most recent annual population estimates published by the U.S. Census available 1 year before when the State DOT Baseline Performance Period Report is due to FHWA.

(E) NHS designations and urbanized areas, in paragraphs (e)(8)(i) and (ii) of this section, shall be determined from the data, contained in HPMS, 1 year before when the State DOT Baseline Performance Period Report is due to FHWA.

(F) The designation of nonattainment or maintenance areas, in paragraphs (e)(8)(i) and (ii) of this section, shall be determined based on the effective date of U.S. EPA's designation under the NAAQS in 40 CFR part 81, as of the date 1 year before the State DOT Baseline Performance Period Report is due to FHWA. The nonattainment and maintenance areas shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report in § 490.107(b)(2)(ii) is due to FHWA, the area is no longer in nonattainment or maintenance for a criteria pollutant included in § 490.703.

(iv) If a State DOT does not meet the criteria specified in paragraph (e)(8)(i) or (ii) of this section 1 year before when the State DOT Baseline Performance Period Report is due to FHWA, then that State DOT is not required to establish targets for the CMAQ Traffic Congestion measures for that performance period.

(v) If the urbanized area, in paragraph (e)(8)(i) or (ii) of this section, does not

contain any part of a nonattainment or maintenance area for the applicable criteria pollutants, as specified in § 490.703, 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA, as described in paragraph (e)(8)(iii)(F) of this section, then that State DOT is not required to meet the requirements in § 490.107 for the CMAQ Traffic Congestion measures for that urbanized area for the remainder of that performance period.

(vi) The following requirements apply only the Peak Hour Excessive Delay (PHED) measure in § 490.707(a) to assess CMAQ Traffic Congestion in to the first performance period:

(A) State DOTs shall establish their 4-year targets, required under paragraph (e)(4)(iv) of this section, and report these targets in their Baseline Performance Period Report, required under § 490.107(b)(1).

(B) State DOTs shall not report 2-year targets, described in paragraph (e)(4)(ii) of this section, and baseline condition/performance in their Baseline Performance Period Report.

(C) State DOTs shall use the 2-year condition/performance in their Mid Performance Period Progress Report, described in § 490.107(b)(2)(ii)(A) as the baseline condition/performance. The established baseline condition/performance shall be collectively developed and agreed upon with relevant MPOs.

(D) State DOTs may, as appropriate, adjust their 4-year target(s) in their Mid Performance Period Progress Report, described in § 490.107(b)(2)(ii)(A). Adjusted 4-year target(s) shall be developed and collectively agreed upon with relevant MPO(s), as described in paragraph (e)(6) of this section.

(E) State DOTs shall annually report metrics for all mainline highways on the NHS for all applicable urbanized area(s) throughout the performance period, as required in § 490.711(f).

(9) *Targets for Total Emissions Reduction measure.* The following requirements apply to establishing targets for the measures specified in paragraph (c)(8) of this section:

(i) The State DOTs shall establish statewide targets for the Total Emissions Reduction measure for all nonattainment and maintenance areas for all applicable criteria pollutants and precursors specified in § 490.803.

(ii) For all nonattainment and maintenance areas within the State geographic boundary, the State DOT shall establish separate statewide targets for each of the applicable criteria pollutants and precursors specified in § 490.803.

(iii) The established targets, as specified in paragraph (e)(4) of this section, shall reflect the anticipated cumulative emissions reduction to be reported in the CMAQ Public Access System required in § 490.809(a).

(iv) In addition to the statewide targets in paragraph (e)(9)(i) of this section, State DOTs may, as appropriate, establish additional targets for any number and combination of nonattainment and maintenance areas by applicable criteria pollutant within the geographic boundary of the State. If a State DOT establishes additional targets for nonattainment and maintenance areas, it shall report the targets in the Baseline Performance Period Report required by § 490.107(b)(1). State DOTs shall evaluate separately the progress of each of these additional targets and report that progress as required under § 490.107(b)(2)(ii)(B) and (b)(3)(ii)(B).

(v) The designation of nonattainment or maintenance areas shall be determined based on the effective date of U.S. EPA's designation under the NAAQS in 40 CFR part 81, as of the date 1 year before the State DOT Baseline Performance Period Report is due to FHWA. The nonattainment and maintenance areas shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report in § 490.107(b)(2)(ii) is due to FHWA, the area is no longer in nonattainment or maintenance for a criteria pollutant included in § 490.803.

(vi) Except as provided in paragraphs (e)(9)(vii) and (viii) of this section, the State DOT shall meet all reporting requirements in § 490.107 for the entire performance period even if there is a change of nonattainment or maintenance area during that performance period.

(vii) If a State geographic boundary does not contain any part of nonattainment or maintenance areas for applicable criteria pollutants and precursors, as specified in § 490.803, 1 year before the State DOT Baseline Performance Period Report is due to FHWA, then that State DOT is not required to establish targets for Total Emissions Reduction measures for that performance period.

(viii) If the State geographic boundary, in paragraph (e)(9)(ii) of this section, does not contain any part of the nonattainment or maintenance area for an applicable criteria pollutant or precursor, as specified in § 490.803, 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA as described in paragraph (e)(9)(v) of this section, then that State DOT is not required to meet the

requirements in § 490.107 for the Total Emissions Reduction measure for that applicable criteria pollutant or precursor for the remainder of that performance period.

(f) *MPO establishment.* The MPOs shall establish targets for each of the performance measures identified in paragraph (c) of this section for the respective target scope identified in paragraph (d) of this section as follows:

(1) *Schedule.* The MPOs shall establish targets no later than 180 days after the respective State DOT(s) establishes their targets, as provided in paragraph (e)(1) of this section.

(i) The MPOs shall establish 4-year targets, described in paragraph (e)(4)(iv) of this section, for all applicable measures, described in paragraphs (c) and (d) of this section.

(ii) Except as provided in paragraph (f)(5)(vi) of this section, the MPOs shall establish 2-year targets, described in paragraph (e)(4)(iii) of this section for the CMAQ Traffic Congestion and Total Emissions Reduction measures, described in paragraphs (c) and (d) of this section as their applicability criteria described in paragraphs (f)(5)(i) and (ii) and (f)(6)(iii) of this section, respectively.

(iii) If an MPO does not meet the criteria described in paragraph (f)(5)(i), (f)(5)(ii), or (f)(6)(iii) of this section, the MPO is not required to establish 2-year target(s) for the corresponding measure(s).

(2) *Coordination.* The MPOs shall coordinate with relevant State DOT(s) on the selection of targets in accordance with 23 U.S.C. 134(h)(2)(B)(i)(II) to ensure consistency, to the maximum extent practicable.

(3) *Target establishment options.* For each performance measure identified in paragraph (c) of this section, except the CMAQ Traffic Congestion measures in paragraph (f)(5) of this section, and MPOs meeting the criteria under paragraph (f)(6)(iii) of this section for Total Emissions Reduction measure, the MPOs shall establish targets by either:

(i) Agreeing to plan and program projects so that they contribute toward the accomplishment of the relevant State DOT target for that performance measure; or

(ii) Committing to a quantifiable target for that performance measure for their metropolitan planning area.

(4) *MPOs serving a multistate planning area.* Except as provided in the CMAQ Traffic Congestion measures in paragraph (f)(5) of this section, and MPOs meeting the criteria under paragraph (f)(6)(iii) of this section, for Total Emissions Reduction measure, MPOs with planning areas extending

across State boundaries shall follow these requirements for each performance measure identified in paragraph (c) of this section:

(i) For each measure, MPOs may choose different target establishment options, provided in paragraph (f)(3) of this section, for the portion of the planning area within each State.

(ii) If MPOs choose the option to agree to plan and program projects to contribute toward State DOT targets, in accordance with paragraph (f)(3)(i) of this section, for a measure, then they shall plan and program projects in support of State DOT targets for the portion of the planning area within each State.

(5) *Urbanized area specific targets.* The following requirements apply to establishing targets for the CMAQ Traffic Congestion measures in paragraph (c)(7) of this section, as their target scope provided in paragraph (d)(2) of this section:

(i) For the performance period that begins on January 1, 2018, MPOs shall establish targets for the CMAQ Traffic Congestion measures specified in § 490.707(a) and (b) when mainline highways on the NHS within their metropolitan planning area boundary cross any part of an urbanized area with a population more than 1 million, and that portion of their metropolitan planning area boundary also contains any portion of a nonattainment or maintenance area for any one of the criteria pollutants, as specified in § 490.703. If an MPO with mainline highways on the NHS within their metropolitan planning area boundary cross any part of an urbanized area with a population more than 1 million and that urbanized area contains any part of a nonattainment or maintenance area, for any one of the criteria pollutant as specified in § 490.703, outside of its metropolitan planning area boundary, then that MPO should coordinate with relevant State DOT(s) and MPO(s) in the target establishment process for the CMAQ Traffic Congestion measures specified in § 490.707.

(ii) Beginning with the performance period that begins on January 1, 2022, and all subsequent performance periods thereafter, MPOs shall establish targets for the CMAQ Traffic Congestion measures specified in § 490.707(a) and (b) when mainline highways on the NHS within their metropolitan planning area boundary cross any part of an urbanized area with a population more than 200,000, and that portion of their metropolitan planning area boundary also contains any portion of a nonattainment or maintenance area for any one of the criteria pollutants, as

specified in § 490.703. If an MPO with mainline highways on the NHS within their metropolitan planning area boundary cross any part of an urbanized area with a population more than 200,000 and that urbanized area contains any part of a nonattainment or maintenance area, for any one of the criteria pollutant as specified in § 490.703, outside of its metropolitan planning area boundary, then that MPO should coordinate with relevant State DOT(s) and MPO(s) in the target establishment process for the CMAQ Traffic Congestion measures specified in § 490.707.

(iii) If required to establish a target for the CMAQ Traffic Congestion measures, as described in paragraphs (f)(5)(i) and/or (ii) of this section, MPOs shall comply with the following:

(A) For each urbanized area, only one 2-year target and one 4-year target for the entire urbanized area shall be established regardless of roadway ownership.

(B) For each urbanized area, all State DOTs and MPOs that contain, within their respective boundaries, any portion of the NHS network in that urbanized area shall agree on one 2-year and one 4-year target for that urbanized area. The targets reported, in accordance with paragraphs (e)(5) and (f)(9) of this section, by the State DOTs and MPOs for that urbanized area shall be identical.

(C) Except as provided in paragraphs (f)(5)(iii)(F) and (f)(5)(v) of this section, MPOs shall meet all reporting requirements in § 490.107(c) for the entire performance period even if there is a change of population, NHS designation, or nonattainment/maintenance area during that performance period.

(D) The 1 million and 200,000 population thresholds, in paragraph (f)(5)(i) and (ii) of this section, shall be determined based on the most recent annual population estimates published by the U.S. Census available 1 year before the State DOT Baseline Performance Period Report is due to FHWA.

(E) NHS designations and urbanized areas, in paragraphs (f)(5)(i) and (ii) of this section, shall be determined from the data, contained in HPMS, 1 year before State DOT Baseline Performance Period Report is due to FHWA.

(F) The designation of nonattainment or maintenance areas, in paragraph (f)(5)(i) and (ii) of this section, shall be determined based on the effective date of U.S. EPA's designation under the NAAQS in 40 CFR part 81, as of the date 1 year before the State DOT Baseline Performance Period Report is due to

FHWA. The nonattainment and maintenance areas shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report in § 490.107(b)(2)(ii) is due to FHWA, the area is no longer in nonattainment or maintenance for a criteria pollutant included in § 490.703.

(iv) If an MPO does not meet the criteria specified in paragraph (f)(5)(i) or (ii) of this section at the time that is 1 year before when the State DOT Baseline Performance Period Report is due to FHWA, then that MPO is not required to establish targets for the CMAQ Traffic Congestion measure for that performance period.

(v) If the portion of the metropolitan planning area boundary within the urbanized area, in paragraph (f)(5)(i) or (ii) of this section, does not contain any part of a nonattainment or maintenance area for the applicable criteria pollutants, as specified in § 490.703, at the time that is 1 year before when the State DOT Mid Performance Period Progress Report is due to FHWA, as described in paragraph (f)(5)(iii)(F) of this section, then that MPO is not required to meet the requirements in § 490.107 for the CMAQ Traffic Congestion measures for that urbanized area for the remainder of that performance period.

(vi) The following requirements apply only to the first performance period and the PHED measure to assess traffic congestion in § 490.707(a):

(A) The MPOs shall not report 2-year targets, described in paragraph (f)(5)(iii)(A) of this section;

(B) The MPOs shall use the 2-year condition/performance in the State DOT Mid Performance Period Progress Report, described in § 490.107(b)(2)(ii)(A) as baseline condition/performance. The established baseline condition/performance shall be agreed upon and made collectively with relevant State DOTs; and

(C) The MPOs may, as appropriate, adjust their 4-year target(s). Adjusted 4-year target(s) shall be collectively developed and agreed upon with all relevant State DOT(s), as described in paragraph (f)(8) of this section.

(6) *Targets for the Total Emissions Reduction measure.* The following requirements apply to establishing targets for the measure in paragraph (c)(8) of this section:

(i) The MPO shall establish targets for each of the applicable criteria pollutants and precursors, specified in § 490.803, for which it is in nonattainment or maintenance, within its metropolitan planning area boundary.

(ii) The established targets, as specified in paragraph (e)(4) of this

section, shall reflect the anticipated cumulative emissions reduction to be reported in the CMAQ Public Access System required in § 490.809(a).

(iii) If any part of a designated nonattainment and maintenance area within the metropolitan planning area overlaps the boundary of an urbanized area with a population more than 1 million in population, as of 1 year before the State DOT Baseline Performance Period Report is due to FHWA, then that MPO shall establish both 2-year and 4-year targets for their metropolitan planning area. The population threshold shall be determined based on the most recent annual population estimates published by the U.S. Census available 1 year before the State DOT Baseline Performance Period Report is due to FHWA.

(iv) For the nonattainment and maintenance areas within the metropolitan planning area that do not meet the criteria in paragraph (f)(6)(iii) of this section, MPOs shall establish 4-year targets for their metropolitan planning area, as described in paragraph (f)(3) of this section.

(v) The designation of nonattainment or maintenance areas shall be determined based on the effective date of U.S. EPA's designation under the NAAQS in 40 CFR part 81, as of the date 1 year before the State DOT Baseline Performance Period Report is due to FHWA. The nonattainment and maintenance areas shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report in § 490.107(b)(2)(ii) is due to FHWA, the area is no longer in nonattainment or maintenance for a criteria pollutant included in § 490.803.

(vi) Except as provided in paragraphs (f)(6)(v) and (viii) of this section, MPOs shall meet all reporting requirements in § 490.107(c) for the entire performance period even if there is a change of nonattainment or maintenance area or population during that performance period.

(vii) If a metropolitan planning area boundary does not contain any part of nonattainment or maintenance areas for applicable criteria pollutants 1 year before when the State DOT Baseline Performance Period Report is due to FHWA, then that MPO is not required to establish targets for the Total Emissions Reduction measure for that performance period.

(viii) If the metropolitan planning area boundary, in paragraph (f)(6)(i) of this section, does not contain any part of a nonattainment or maintenance area for the applicable criteria pollutants, as specified in § 490.803, 1 year before the

State DOT Mid Performance Period Progress Report is due to FHWA, as described in paragraph (f)(6)(v) of this section, then that MPO is not required to meet the requirements in § 490.107 for the Total Emissions Reduction measure for that applicable criteria pollutant or precursor for the remainder of that performance period.

(7) *MPO response to State DOT target adjustment.* For the established targets in paragraph (f)(3) of this section, if the State DOT adjusts a 4-year target in the State DOT's Mid Performance Period Progress Report and if, for that respective target, the MPO established a target by supporting the State DOT target as allowed under paragraph (f)(3)(i) of this section, then the MPO shall, within 180 days, report to the State DOT whether it will either:

(i) Agree to plan a program of projects so that they contribute to the adjusted State DOT target for that performance measure; or

(ii) Commit to a new quantifiable target for that performance measure for its metropolitan planning area.

(8) *Target adjustment.* If the MPO establishes its target by committing to a quantifiable target, described in paragraph (f)(3)(ii) of this section or establishes target(s) for the Total Emissions Reduction measure required in paragraph (f)(6)(iii) of this section, then the MPOs may adjust its target(s) in a manner that is collectively developed, documented, and mutually agreed upon by the State DOT and MPO. Any adjustments made to 4-year targets, established for CMAQ Traffic Congestion measures in paragraph (f)(5)(i) or (ii) of this section, shall be collectively developed and agreed upon by all State DOTs and MPOs that include any portion of the NHS in the respective urbanized area applicable to the measure.

(9) *Reporting.* The MPOs shall report targets and progress toward the achievement of their targets as specified in § 490.107(c). After the MPOs establish or adjust their targets, the relevant State DOT(s) must be able to provide these targets to FHWA upon request.

§ 490.107 Reporting on performance targets.

(a) *In general.* All State DOTs and MPOs shall report the information specified in this section for the targets required in § 490.105.

(1) All State DOTs and MPOs shall report in accordance with the schedule and content requirements under paragraphs (b) and (c) of this section, respectively.

(2) For the measures identified in § 490.207(a), all State DOTs and MPO shall report on performance in accordance with § 490.213.

(3) State DOTs shall report using an electronic template provided by FHWA.

(b) *State Biennial Performance Report.* State DOTs shall report to FHWA baseline condition/performance at the beginning of a performance period and progress achievement at both the midpoint and end of a performance period. State DOTs shall report at an ongoing 2-year frequency as specified in paragraphs (b)(1) through (3) of this section.

(1) *Baseline Performance Period Report*—(i) *Schedule.* State DOTs shall submit a Baseline Performance Period Report to FHWA by October 1st of the first year in a performance period. State DOTs shall submit their first Baseline Performance Period Report to FHWA by October 1, 2018, and subsequent Baseline Performance Period Reports to FHWA by October 1st every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information in each Baseline Performance Period Report:

(A) *Targets.* 2-year and 4-year targets for the performance period, as required in § 490.105(e), and a discussion, to the maximum extent practicable, of the basis for each established target;

(B) *Baseline condition/performance.* Baseline condition/performance derived from the latest data collected through the beginning date of the performance period specified in § 490.105(e)(4)(i) for each target, required under paragraph (b)(1)(ii)(A) of this section;

(C) *Relationship with other performance expectations.* A discussion, to the maximum extent practicable, on how the established targets in paragraph (b)(1)(ii)(A) of this section support expectations documented in longer range plans, such as the State asset management plan required by 23 U.S.C. 119(e) and the long-range statewide transportation plan provided in part 450 of this chapter;

(D) *Urbanized area boundaries and population data for targets.* For the purpose of establishing additional targets for urbanized and non-urbanized areas in § 490.105(e)(3) and the urbanized area specific targets in § 490.105(e)(8), State DOTs shall document the boundary extent for all applicable urbanized areas based on information in HPMS;

(E) *Congestion at truck freight bottlenecks.* The State DOT shall document the location of truck freight bottlenecks within the State, including those identified in the National Freight Strategic Plan. If a State has prepared a

State Freight Plan under 49 U.S.C. 70202, within the last 2 years, then the State Freight Plan may serve as the basis for identifying truck freight bottlenecks;

(F) *Nonattainment and maintenance area for targets.* Where applicable, for the purpose of determining target scope in § 490.105(d) and any additional targets under § 490.105(e)(9)(iv), State DOTs shall describe the boundaries of U.S. EPA's designated nonattainment and maintenance areas, as described in §§ 490.103(c) and 490.105(e)(9)(v);

(G) *MPO CMAQ Performance Plan.* Where applicable, State DOTs shall include as an attachment the MPO CMAQ Performance Plan, described in paragraph (c)(3) of this section;

(H) *GHG metrics for the GHG measure.* Total tailpipe CO₂ emissions for the calendar year 2017, as described in § 490.511(f)(1) and total tailpipe CO₂ emissions for the 2 preceding calendar years of the year in which Baseline Performance Period Report is due to FHWA, as described in § 490.511(f)(2) for the GHG measure in § 490.507(b); and

(I) *Data collection method for the Percent of Non-SOV Travel measure.* Where applicable, State DOTs shall report the data collection method that is used to determine the Percent of Non-SOV Travel measure, in § 490.707(b), for each applicable urbanized area in the State, as provided in § 490.709(f)(2).

(2) *Mid Performance Period Progress Report—(i) Schedule.* State DOTs shall submit a Mid Performance Period Progress Report to FHWA by October 1st of the third year in a performance period. State DOTs shall submit their first Mid Performance Period Progress Report to FHWA by October 1, 2020, and subsequent Mid Performance Period Progress Reports to FHWA by October 1st every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information in each Mid Performance Period Progress Report:

(A) *2-year condition/performance.* The actual condition/performance derived from the latest data collected through the midpoint of the performance period, specified in § 490.105(e)(4), for each State DOT reported target required in paragraph (b)(1)(ii)(A) of this section;

(B) *2-year progress in achieving performance targets.* A discussion of the State DOT's progress toward achieving each established 2-year target in paragraph (b)(1)(ii)(A) of this section. The State DOT shall compare the actual 2-year condition/performance in paragraph (b)(2)(ii)(A) of this section, within the boundaries and limits documented in paragraphs (b)(1)(ii)(D)

and (E) of this section, with the respective 2-year target and document in the discussion any reasons for differences in the actual and target values;

(C) *Investment strategy discussion.* A discussion on the effectiveness of the investment strategies developed and documented in the State asset management plan for the NHS required under 23 U.S.C. 119(e);

(D) *Congestion at truck freight bottlenecks.* Discussion on progress of the State DOT's efforts in addressing congestion at truck freight bottlenecks within the State, as described in paragraph (b)(1)(ii)(F) of this section, through comprehensive freight improvement efforts of State Freight Plan or MPO freight plans; the Statewide Transportation Improvement Program and Transportation Improvement Program; regional or corridor level efforts; other related planning efforts; and operational and capital activities targeted to improve freight movement on the Interstate System. If a State has prepared a State Freight Plan under 49 U.S.C. 70202 within the previous 2 years, then the State Freight Plan may serve as the basis for addressing congestion at truck freight bottlenecks. If the State Freight Plan has not been updated since the previous State Biennial Performance Report, then an updated analysis of congestion at truck freight bottlenecks must be completed;

(E) *Target adjustment discussion.* When applicable, a State DOT may submit an adjusted 4-year target to replace an established 4-year target in paragraph (b)(1)(ii)(A) of this section. If the State DOT adjusts its target, it shall include a discussion on the basis for the adjustment and how the adjusted target supports expectations documented in longer range plans, such as the State asset management plan and the long-range statewide transportation plan. The State DOT may only adjust a 4-year target at the midpoint and by reporting the change in the Mid Performance Period Progress Report;

(F) *2-year significant progress discussion for the National Highway Performance Program (NHPP) targets and the National Highway Freight Program (NHFP) target.* State DOTs shall discuss the progress they have made toward the achievement of all 2-year targets established for the NHPP measures in § 490.105(c)(1) through (5) and the Freight Reliability measure in § 490.105(c)(6). This discussion should document a summary of prior accomplishments and planned activities that will be conducted during the remainder of the performance period to

make significant progress toward that achievement of 4-year targets for applicable measures;

(G) *Extenuating circumstances discussion on 2-year Targets.* When applicable, for 2-year targets for the NHPP or NHFP, a State DOT may include a discussion on the extenuating circumstance(s), described in § 490.109(e)(5), beyond the State DOT's control that prevented the State DOT from making 2-year significant progress toward achieving NHPP or NHFP target(s) in paragraph (b)(2)(ii)(F) of this section;

(H) *Applicable target achievement discussion.* If FHWA determined that a State DOT has not made significant progress toward the achievement of any 4-year NHPP or NHFP targets in the FHWA determination made after the State DOT submits the Full Performance Period Progress Report for the immediate prior performance period, then the State DOT shall include a description of the actions they will undertake to better achieve those targets as required under § 490.109(f). If FHWA determined under § 490.109(e) that the State DOT has made significant progress for immediate prior performance period's 4-year NHPP or NHFP targets, then the State DOT does not need to include this description for those targets;

(I) *MPO CMAQ Performance Plan.* Where applicable, State DOTs shall include as an attachment the MPO CMAQ Performance Plan, described in paragraph (c)(3) of this section; and

(J) *GHG metrics for the GHG measure.* Total tailpipe CO₂ emissions for 2 preceding calendar years of the year in which the Mid Performance Period Progress Report is due to FHWA, as described in § 490.511(f)(2), for the GHG measure in § 490.507(b).

(3) *Full Performance Period Progress Report—(i) Schedule.* State DOTs shall submit a progress report on the full performance period to FHWA by October 1st of the first year following the reference performance period. State DOTs shall submit their first Full Performance Period Progress Report to FHWA by October 1, 2022, and subsequent Full Performance Period Progress Reports to FHWA by October 1st every 4 years thereafter.

(ii) *Content.* The State DOT shall report the following information for each Full Performance Period Progress Report:

(A) *4-year condition/performance.* The actual condition/performance derived from the latest data collected through the end of the performance period, specified in § 490.105(e)(4), for

each State DOT reported target required in paragraph (b)(1)(ii)(A) of this section;

(B) *4-year progress in achieving performance targets.* A discussion of the State DOT's progress made toward achieving each established 4-year target in paragraph (b)(1)(ii)(A) or (b)(2)(ii)(E) of this section, when applicable. The State DOT shall compare the actual 4-year condition/performance in paragraph (b)(3)(ii)(A) of this section, within the boundaries and limits documented in paragraphs (b)(1)(ii)(D) and (E) of this section, with the respective 4-year target and document in the discussion any reasons for differences in the actual and target values;

(C) *Investment strategy discussion.* A discussion on the effectiveness of the investment strategies developed and documented in the State asset management plan for the NHS required under 23 U.S.C. 119(e);

(D) *Congestion at truck freight bottlenecks.* Discussion on progress of the State DOT's efforts in addressing congestion at truck freight bottlenecks within the State, as described in paragraphs (b)(1)(ii)(F) and (b)(2)(ii)(D) of this section;

(E) *4-year significant progress evaluation for applicable targets.* State DOTs shall discuss the progress they have made toward the achievement of all 4-year targets established for the NHPP measures in § 490.105(c)(1) through (5) and the Freight Reliability measure in § 490.105(c)(6). This discussion shall include a summary of accomplishments achieved during the performance period to demonstrate whether the State DOT has made significant progress toward achievement of 4-year targets for those measures;

(F) *Extenuating circumstances discussion on applicable targets.* When applicable, a State DOT may include discussion on the extenuating circumstance(s), described in § 490.109(e)(5), beyond the State DOT's control that prevented the State DOT from making a 4-year significant progress toward achieving NHPP or NHFP targets, described in paragraph (b)(3)(ii)(E) of this section;

(G) *Applicable target achievement discussion.* If FHWA determined that a State DOT has not made significant progress toward the achievement of any 2-year NHPP or NHFP targets in the biennial FHWA determination made after the State DOT submits the Mid Performance Period Progress Report for the performance period, then the State DOT shall include a description of the actions they will undertake to better achieve those targets as required under § 490.109(f). If FHWA determined in

§ 490.109(e) that the State DOT has made significant progress for the 2-year NHPP or NHFP targets for the performance period, then the State DOT does not need to include this description for those targets;

(H) *MPO CMAQ Performance Plan.* Where applicable, State DOTs shall include as an attachment the MPO CMAQ Performance Plan, described in paragraph (c)(3) of this section; and

(I) *GHG metrics for the GHG measure.* Total tailpipe CO₂ emissions for 2 preceding calendar years of the year in which the Full Performance Period Progress Report is due to FHWA, as described in § 490.511(f)(2), for the GHG measure in § 490.507(b).

(c) *MPO Report.* The MPOs shall establish targets in accordance with § 490.105 and report targets and progress toward the achievement of their targets in a manner that is consistent with the following:

(1) The MPOs shall report their established targets to their respective State DOT in a manner that is documented and mutually agreed upon by both parties.

(2) The MPOs shall report baseline condition/performance and progress toward the achievement of their targets in the system performance report in the metropolitan transportation plan in accordance with part 450 of this chapter.

(3) The MPOs serving a TMA and meeting criteria, specified in § 490.105(f)(6)(iii), shall develop a CMAQ performance plan as required by 23 U.S.C. 149(l). The CMAQ performance plan is not required when the MPO meets the criteria specified in § 490.105(f)(6)(vii) or (viii).

(i) The CMAQ performance plan shall be submitted to FHWA by the State DOT, and be updated biennially on the same schedule as the State Biennial Performance Reports.

(ii) For the CMAQ Traffic Congestion and Total Emissions Reduction measures in subparts G and H of this part, the CMAQ performance plan submitted with the State DOT's Baseline Performance Period Report to FHWA shall include:

(A) The 2-year and 4-year targets for the CMAQ Traffic Congestion measures, identical to the relevant State DOT(s) reported target under paragraph (b)(1)(ii)(A) of this section, for each applicable urbanized area;

(B) The 2-year and 4-year targets for the Total Emissions Reduction measure for the performance period;

(C) Baseline condition/performance for each MPO reported CMAQ Traffic Congestion targets, identical to the relevant State DOT(s) reported baseline

condition/performance under paragraph (b)(1)(ii)(B) of this section;

(D) Baseline condition/performance derived from the latest estimated cumulative emissions reductions from CMAQ projects for each MPO reported Total Emissions Reduction target; and

(E) A description of projects identified for CMAQ funding and how such projects will contribute to achieving the performance targets for these measures.

(iii) For the CMAQ Traffic Congestion and Total Emissions Reduction measures in subparts G and H of this part, the CMAQ performance plan submitted with the State DOT's Mid Performance Period Progress Report to FHWA shall include:

(A) 2-year condition/performance for the CMAQ Traffic Congestion measures, identical to the relevant State DOT(s) reported condition/performance under paragraph (b)(2)(ii)(A) of this section, for each applicable urbanized area;

(B) 2-year condition/performance derived from the latest estimated cumulative emissions reductions from CMAQ projects for each MPO reported Total Emissions Reduction target;

(C) An assessment of the progress of the projects identified in the CMAQ performance plan submitted with the Baseline Performance Period Report toward achieving the 2-year targets for these measures;

(D) When applicable, an adjusted 4-year target to replace an established 4-year target; and

(E) An update to the description of projects identified for CMAQ funding and how those updates will contribute to achieving the 4-year performance targets for these measures.

(iv) For the CMAQ Traffic Congestion and Total Emissions Reduction measures in subparts G and H of this part, the CMAQ performance plan submitted with the State DOT's Full Performance Period Progress Report to FHWA shall include:

(A) 4-year condition/performance for the CMAQ Traffic Congestion measures, identical to the relevant State DOT(s) reported condition/performance reported under paragraph (b)(3)(ii)(A) of this section, for each applicable urbanized area;

(B) 4-year condition/performance derived from the latest estimated cumulative emissions reductions from CMAQ projects for each MPO reported Total Emissions Reduction target; and

(C) An assessment of the progress of the projects identified in both paragraphs (c)(3)(ii)(C) and (c)(3)(iii)(D) of this section toward achieving the 4-year targets for these measures.

(4) If an MPO elected to establish a quantifiable target, as provided in

§ 490.105(f)(3)(ii), for the GHG measure in § 490.507(b), then that MPO shall report a description of its measure calculation method to its State DOT in a manner that is documented and mutually agreed upon by both the State DOT and the MPO.

§ 490.109 Assessing significant progress toward achieving the performance targets for the National Highway Performance Program and the National Highway Freight Program.

(a) *In general.* The FHWA will assess each of the State DOT targets separately for the NHPP measures specified in § 490.105(c)(1) through (5) and the Freight Reliability measure specified in § 490.105(c)(6) to determine the significant progress made toward the achievement of those targets.

(b) *Frequency.* The FHWA will determine whether a State DOT has or has not made significant progress toward the achievement of applicable targets as described in paragraph (e) of this section at the midpoint and the end of each performance period.

(c) *Schedule.* The FHWA will determine significant progress toward the achievement of a State DOT's NHPP and NHFP targets after the State DOT submits the Mid Performance Period Progress Report for progress toward the achievement of 2-year targets, and again after the State DOT submits the Full Performance Period Progress Report for progress toward the achievement of 4-year targets. The FHWA will notify State DOTs of the outcome of the determination of the State DOT's ability to make significant progress toward the achievement of its NHPP and NHFP targets.

(d) *Source of data/information.* (1) The FHWA will use the following sources of information to assess NHPP target achievement and condition/performance progress:

(i) Data contained within the HPMS on June 15th of the year in which the significant progress determination is made that represents conditions from the prior year for targets established for Interstate System pavement condition measures, as specified in § 490.105(c)(1);

(ii) Data contained within the HPMS on August 15th of the year in which the significant progress determination is made that represents conditions from the prior year for targets established for non-Interstate NHS pavement condition measures, as specified in § 490.105(c)(2);

(iii) The most recently available data contained within the NBI as of June 15th of the year in which the significant progress determination is made for

targets established for NHS bridge condition measures, as specified in § 490.105(c)(3);

(iv) Data contained within the HPMS on August 15th of the year in which the significant progress determination is made that represents performance from the prior year for targets established for the Travel Time Reliability measures, as specified in § 490.105(c)(4);

(v) On October 1st of the year in which the significant progress determination is made, the reported total tailpipe CO₂ emissions for the calendar year 2017 in the Baseline Performance Period Report, as described in § 490.107(b)(1)(ii)(I), and the reported total tailpipe CO₂ emissions in the State Biennial Performance Report, as described in § 490.107(b)(2)(ii)(J) or (b)(3)(ii)(I), in the year in which the significant progress determination is made for GHG measure in § 490.105(c)(5); and

(vi) Baseline condition/performance data contained in HPMS and NBI of the year in which the Baseline Period Performance Report is due to FHWA that represents baseline conditions/performances for the performance period for the measures in § 490.105(c)(1) through (4), and the HPMS data reported in the year in which Baseline Period Performance Report is due to FHWA and the total tailpipe CO₂ emissions reported in the Baseline Period Performance Report, as provided in § 490.107(b)(1)(ii)(I), for the GHG measure in § 490.105(c)(5).

(2) The FHWA will use the following sources of information to assess NHFP target achievement and condition/performance progress:

(i) Data contained within the HPMS on August 15th of the year in which the significant progress determination is made that represents performance from the prior year for targets established for the Freight Reliability measure, as specified in § 490.105(c)(6); and

(ii) Baseline condition/performance data contained in HPMS of the year in which the Baseline Period Performance Report is due to FHWA that represents baseline condition/performance for the performance period.

(e) *Significant progress determination for individual NHPP and NHFP targets—*(1) *In general.* The FHWA will biennially assess whether the State DOT has achieved or made significant progress toward each target established by the State DOT for the NHPP measures described in § 490.105(c)(1) through (5) and the Freight Reliability measure described in § 490.105(c)(6). The FHWA will assess the significant progress of each statewide target separately using the condition/

performance data/information sources described in paragraph (d) of this section. The FHWA will not assess the progress achieved for any additional targets a State DOT may establish under § 490.105(e)(3).

(2) *Significant progress toward individual NHPP and NHFP targets.* The FHWA will determine that a State DOT has made significant progress toward the achievement of each 2-year or 4-year applicable target if either:

(i) The actual condition/performance level is better than the baseline condition/performance; or

(ii) The actual condition/performance level is equal to or better than the established target.

(3) *Phase-in of new requirements.* The following requirements shall only apply to the first performance period and only to the Interstate System pavement condition targets and non-Interstate NHS Travel Time Reliability targets, described in § 490.105(e)(7):

(i) At the midpoint of the first performance period, FHWA will not make a determination of significant progress toward the achievement of 2-year targets for Interstate System pavement condition measures:

(ii) The FHWA will classify the assessment of progress toward the achievement of targets in paragraph (e)(3)(i) of this section as "progress not determined" so that they will be excluded from the requirement under paragraph (e)(2) of this section; and

(iii) The FHWA will not make a determination of significant progress toward the achievement of 2-year targets for the Non-Interstate NHS Travel Time Reliability measure.

(4) *Insufficient data and/or information.* The FHWA will determine that a State DOT has not made significant progress toward the achievement of an individual NHPP or NHFP target if:

(i) A State DOT does not submit a required report, individual target, or other information as specified in § 490.107 for the each of the measures in § 490.105(c)(1) through (6);

(ii) The data contained in HPMS do not meet the requirements under § 490.313(b)(4)(i) by the data extraction date specified in paragraph (d)(1) of this section for the each of the Interstate System pavement condition measures in § 490.105(c)(1);

(iii) The data contained in HPMS do not meet the requirements under § 490.313(b)(4)(i) by the data extraction date specified in paragraph (d)(2) of this section for the each of the non-Interstate NHS pavement condition measures in § 490.105(c)(2);

(iv) A State DOT reported data are not cleared in the NBI by the data extraction data specified in paragraph (d)(3) of this section for the each of the NHS bridge condition measures in § 490.105(c)(3); or

(v) The data were determined insufficient, as described in paragraphs (e)(4)(ii) through (iv) of this section, in the year in which the Baseline Period Performance Report is due to FHWA for the measures in § 490.105(c)(1) through (3).

(5) *Extenuating circumstances.* The FHWA will consider extenuating circumstances documented by the State DOT in the assessment of progress toward the achievement of NHPP and NHFP targets in the relevant State Biennial Performance Report, provided in § 490.107.

(i) The FHWA will classify the assessment of progress toward the achievement of an individual 2-year or 4-year target as “progress not determined” if the State DOT has provided an explanation of the extenuating circumstances beyond the control of the State DOT that prevented it from making significant progress toward the achievement of a 2-year or 4-year target and the State DOT has quantified the impacts on the condition/performance that resulted from the circumstances, which are:

(A) Natural or man-made disasters that caused delay in NHPP or NHFP project delivery, extenuating delay in data collection, and/or damage/loss of data system;

(B) Sudden discontinuation of Federal government furnished data due to natural and man-made disasters or sudden discontinuation of Federal government furnished data due to lack of funding; and/or

(C) New law and/or regulation directing State DOTs to change metric and/or measure calculation.

(ii) If the State DOT’s explanation, described in paragraph (e)(5)(i) of this section, is accepted by FHWA, FHWA will classify the progress toward achieving the relevant target(s) as “progress not determined,” and those targets will be excluded from the requirement in paragraph (e)(2) of this section.

(f) *Performance achievement.* (1) If FHWA determines that a State DOT has not made significant progress toward the achieving of NHPP targets, then the State DOT shall include as part of the next performance target report under 23 U.S.C. 150(e) [the Biennial Performance Report] a description of the actions the State DOT will undertake to achieve the targets related to the measure in which

significant progress was not achieved as follows:

(i) If significant progress is not made for either target established for the Interstate System pavement condition measures, § 490.307(a)(1) and (2), then the State DOT shall document the actions it will take to achieve Interstate Pavement condition targets;

(ii) If significant progress is not made for either target established for the Non-Interstate System pavement condition measures, § 490.307(a)(3) and (4), then the State DOT shall document the actions it will take to achieve Non-Interstate Pavement condition target;

(iii) If significant progress is not made for either target established for the NHS bridge condition measures, § 490.407(c)(1) and (2), then the State DOT shall document the actions it will take to achieve NHS bridge condition target;

(iv) If significant progress is not made for either target established for the Travel Time Reliability measures, § 490.507(a)(1) and (2), then the State DOT shall document the actions it will take to achieve the NHS travel time targets; and

(v) If significant progress is not made for the target established for the GHG measure described in § 490.507(b), then the State DOT shall document the actions it will take to achieve the target for the GHG measure.

(2) If FHWA determines that a State DOT has not made significant progress toward achieving the target established for the Freight Reliability measure in § 490.607, then the State DOT shall include as part of the next performance target report under 23 U.S.C. 150(e) [the Biennial Performance Report] the following:

(i) An identification of significant freight system trends, needs, and issues within the State.

(ii) A description of the freight policies and strategies that will guide the freight-related transportation investments of the State.

(iii) An inventory of truck freight bottlenecks within the State and a description of the ways in which the State DOT is allocating funding under title 23 U.S.C. to improve those bottlenecks.

(A) The inventory of truck freight bottlenecks shall include the route and milepost location for each identified bottleneck, roadway section inventory data reported in HPMS, Average Annual Daily Traffic (AADT), Average Annual Daily Truck Traffic (AADTT), Travel-time data and measure of delay, such as travel time reliability, or Average Truck Speeds, capacity feature causing the bottleneck or any other constraints

applicable to trucks, such as geometric constraints, weight limits or steep grades.

(B) For those facilities that are State-owned or operated, the description of the ways in which the State DOT is improving those bottlenecks shall include an identification of methods to address each bottleneck and improvement efforts planned or programed through the State Freight Plan or MPO freight plans; the Statewide Transportation Improvement Program and Transportation Improvement Program; regional or corridor level efforts; other related planning efforts; and operational and capital activities.

(iv) A description of the actions the State DOT will undertake to achieve the target established for the Freight Reliability measure in § 490.607.

(3) The State DOT should, within 6 months of the significant progress determination, amend its Biennial Performance Report to document the information specified in this paragraph to ensure actions are being taken to achieve targets.

§ 490.111 Incorporation by reference.

(a) Certain material is incorporated by reference into this part with the approval of the Director of the Federal Register under 5 U.S.C. 552(a) and 1 CFR part 51. To enforce any edition other than that specified in this section, FHWA must publish a notice of change in the **Federal Register** and the material must be available to the public. All approved material is available for inspection at the Federal Highway Administration, Office of Highway Policy Information (202–366–4631) 1200 New Jersey Avenue SE., Washington, DC 20590, www.fhwa.dot.gov and is available from the sources listed below. It is also available for inspection at the National Archives and Records Administration (NARA). For information on the availability of this material at NARA, call 202–741–6030 or go to http://www.archives.gov/federal_register/code_of_federal_regulations/ibr_locations.html.

(b) The Federal Highway Administration, 1200 New Jersey Avenue SE., Washington, DC 20590, www.fhwa.dot.gov.

(1) Highway Performance Monitoring System (HPMS) Field Manual, IBR approved for §§ 490.103, 490.309, 490.311, and 490.319.

(2) Recording and Coding Guide for the Structure Inventory and Appraisal of the Nation’s Bridges, includes: Errata Sheet for Coding Guide 06/2011, Report No. FHWA–PD–96–001, December

1995, IBR approved for §§ 490.409 and 490.411.

(c) The American Association of State Highway and Transportation Officials, 444 North Capitol Street NW., Suite 249, Washington, DC 20001, (202) 624-5800, www.transportation.org.

(1) AASHTO Standard M328-14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Inertial Profiler, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(2) AASHTO Standard R57-14, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Operating Inertial Profiling Systems, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(3) AASHTO Standard R48-10 (2013), Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Determining Rut Depth in Pavements, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(4) AASHTO Standard R36-13, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Evaluating Faulting of Concrete Pavements, 2014, 34th/2014 Edition, IBR approved for § 490.309.

(5) AASHTO Standard R43-13, Standard Specification for Transportation Materials and Methods of Sampling and Testing, Standard Practice for Quantifying Roughness of Pavement, 2014, 34th/2014 Edition, IBR approved for § 490.311.

■ 3. Add subpart E to read as follows:

Subpart E—National Performance Management Measures To Assess Performance of the National Highway System

Sec.	
490.501	Purpose.
490.503	Applicability.
490.505	Definitions.
490.507	National performance management measures for system performance.
490.509	Data requirements.
490.511	Calculation of National Highway System performance metrics.
490.513	Calculation of National Highway System performance measures.

§ 490.501 Purpose.

The purpose of this subpart is to implement the requirements of 23 U.S.C. 150(c)(3)(A)(ii)(IV) and (V) to establish performance measures for State Departments of Transportation (State DOTs) and Metropolitan Planning Organizations (MPOs) to use to assess:

(a) Performance of the Interstate System; and

(b) Performance of the non-Interstate National Highway System (NHS).

§ 490.503 Applicability.

(a) The performance measures are applicable to those portions of the mainline highways on the NHS as provided in paragraphs (a)(1) and (2) of this section (and in more detail in § 490.507):

(1) The Travel Time Reliability measures in § 490.507(a) are applicable to all directional mainline highways on the Interstate System and non-Interstate NHS.

(2) The Greenhouse Gas (GHG) measure in § 490.507(b) is applicable to all mainline highways on the Interstate and non-Interstate NHS.

(b) [Reserved]

§ 490.505 Definitions.

All definitions in § 490.101 apply to this subpart. Unless otherwise specified in this subpart, the following definitions apply to this subpart:

Greenhouse gas (GHG) is any gas that absorbs infrared radiation (traps heat) in the atmosphere. Ninety-five percent of transportation GHG emissions are carbon dioxide (CO₂) from burning fossil fuel. Other transportation GHGs are methane (CH₄), nitrous oxide (N₂O), and hydrofluorocarbons (HFCs).

Level of Travel Time Reliability is a comparison, expressed as a ratio, of the 80th percentile travel time of a reporting segment to the “normal” (50th percentile) travel time of a reporting segment occurring throughout a full calendar year.

Normal Travel Time (or 50th percentile travel time) is the time of travel to traverse the full extent of a reporting segment which is greater than the time for 50 percent of the travel in a calendar year to traverse the same reporting segment.

Travel time cumulative probability distribution means a representation of all the travel times for a road segment during a defined reporting period (such as annually) presented in a percentile ranked order as provided in the travel time data set. The normal (50th percentile) and 80th percentile travel times used to compute the Travel Time Reliability measures may be identified by the travel time cumulative probability distribution.

§ 490.507 National performance management measures for system performance.

There are three performance measures to assess the performance of the Interstate System and the performance of the non-Interstate NHS for the purpose of carrying out the National

Highway Performance Program (referred to collectively as the NHS Performance measures).

(a) Two measures are used to assess reliability (referred to collectively as the Travel Time Reliability measures). They are:

(1) Percent of the person-miles traveled on the Interstate that are reliable (referred to as the Interstate Travel Time Reliability measure); and

(2) Percent of person-miles traveled on the non-Interstate NHS that are reliable (referred to as the Non-Interstate Travel Time Reliability measure).

(b) One measure is used to assess GHG emissions, which is the percent change in tailpipe CO₂ emissions on the NHS compared to the calendar year 2017 level (referred to as the GHG measure).

§ 490.509 Data requirements.

(a) Travel time data needed to calculate the Travel Time Reliability measures in § 490.507(a) shall come from the travel time data set, as specified in § 490.103(e).

(1) State DOTs, in coordination with MPOs, shall define reporting segments in accordance with § 490.103(f). Reporting segments must be contiguous so that they cover the full extent of the mainline highways of the NHS in the State.

(2) [Reserved]

(b) State DOTs shall not replace missing travel times when data are not available in the travel time data set (data not reported, or reported as “0” or null) as specified in § 490.511(b)(1)(v).

(c) AADT needed to calculate the Travel Time Reliability measures will be used, as reported to HPMS in June of the reporting year, to assign an annual volume to each reporting segment. Annual volume will be calculated as: Annual Volume = AADT × 365 days

(d) The average occupancy factors for the State and/or metropolitan area (as applicable) needed to calculate Travel Time Reliability measures shall come from the most recently available data tables published by FHWA unless using other allowed data source(s).

(e) If an NHS roadway is closed, the State DOT is not required to include those time periods for those segments of road in the calculations required for the Level of Travel Time Reliability (LOTTR) metric (see § 490.511(a)(1)).

(f) The FHWA will post on the FHWA Web site the tailpipe CO₂ emissions factors State DOTs and MPOs shall use in the calculation.

(g) Fuel sales information needed to calculate the GHG measure in § 490.507(b) shall come from either of the following two sources:

(1) The most recent final annual fuel sales data posted on the Web site by FHWA in Highway Statistics under “Motor Fuel Use (MF–21)” as of August 15th of the HPMS reporting year (<https://www.fhwa.dot.gov/policyinformation/statistics.cfm>); or

(2) The State DOT’s fuel sales data used to create the summary data included in FHWA’s MF–21, if it allows for a greater level of detail by fuel type. State DOTs shall make this data available to FHWA, upon request.

(h) Final annual vehicle miles traveled (VMT) needed to calculate the GHG measure in § 490.507(b) shall come from the most recently available data posted by FHWA in Highway Statistics in Table VM–3, “Federal-Aid Highway Travel” as of August 15th of the HPMS reporting year.

§ 490.511 Calculation of National Highway System performance metrics.

(a) Two performance metrics are required for the NHS Performance measures specified in § 490.507. These are:

(1) Level of Travel Time Reliability (LOTTR) for the Travel Time Reliability measures in § 490.507(a) (referred to as the LOTTR metric).

(2) Annual Total Tailpipe CO₂ Emissions on the NHS for the GHG

measure in § 490.507(b) (referred to as the GHG metric).

(b) The State DOT shall calculate the LOTTR metrics for each NHS reporting segment in accordance with the following:

(1) Data sets shall be created from the travel time data set to be used to calculate the LOTTR metrics. This data set shall include, for each reporting segment, a ranked list of average travel times for all traffic (“all vehicles” in NPMRDS nomenclature), to the nearest second, for 15 minute periods of a population that:

(i) Includes travel times occurring between the hours of 6 a.m. and 10 a.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year;

(ii) Includes travel times occurring between the hours of 10 a.m. and 4 p.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year;

(iii) Includes travel times occurring between the hours of 4 p.m. and 8 p.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year; and

(iv) Includes travel times occurring between the hours of 6: a.m. and 8: p.m. for every weekend day (Saturday–

Sunday) from January 1st through December 31st of the same year.

(2) The Normal Travel Time (50th percentile) shall be determined from each data set defined under paragraph (b)(1) of this section as the time in which 50 percent of the times in the data set are shorter in duration and 50 percent are longer in duration. The 80th percentile travel time shall be determined for each data set defined under paragraph (b)(1) of this section as the time in which 80 percent of the times in the data set are shorter in duration and 20 percent are longer in duration. Both the Normal and 80th percentile travel times can be determined by plotting the data on a travel time cumulative probability distribution graph or using the percentile functions available in spreadsheet and other analytical tools.

(3) Four LOTTR metrics shall be calculated for each reporting segment; one for each data set defined under paragraph (b)(1) of this section as the 80th percentile travel time divided by the 50th percentile travel time and rounded to the nearest hundredth.

(c) Tailpipe CO₂ emissions on the NHS for a given year are calculated as follows:

$$(\text{Tailpipe CO}_2 \text{ Emissions on NHS})_{\text{CY}} = \left(\sum_{t=1}^T (\text{Fuel Consumed})_t \times (\text{CO}_2 \text{ Factor})_t \right) \times \left(\frac{\text{NHS VMT}}{\text{Total VMT}} \right)$$

Where:

(Tailpipe CO₂ Emissions on NHS)_{CY} = Total tailpipe CO₂ emissions on the NHS in a calendar year (to the nearest thousand tons);

T = the total number of on-road fuel types;

t = an on-road fuel type;

(Fuel Consumed)_t = the quantity of total annual fuel consumed for on-road fuel type “t” (to the nearest thousand gallons);

(CO₂ Factor)_t = is the amount of CO₂ released per unit of fuel consumed for on-road fuel type “t”;

NHS VMT = annual total vehicle-miles traveled on NHS (to the nearest one million vehicle-miles); and

Total VMT = annual total vehicle-miles traveled on all public roads (to the nearest one million vehicle-miles).

(d) For the GHG measure listed in § 490.507(b), MPOs are granted additional flexibility in how they calculate the GHG metric. MPOs may use the MPO share of the State’s VMT as a proxy for the MPO share of CO₂ emissions, VMT estimates along with

MOVES² emissions factors, FHWA’s Energy and Emissions Reduction Policy Analysis Tool (EERPAT) model, or other method the MPO can demonstrate has valid and useful results for CO₂ measurement.

(e) Starting in 2018 and annually thereafter, State DOTs shall report the LOTTR metrics, defined in paragraph (b) of this section, in accordance with HPMS Field Manual by June 15th of each year for the previous year’s measures.

(1) Metrics are reported to HPMS by reporting segment. All reporting segments where the NPMRDS is used shall be referenced by NPMRDS TMC(s) or HPMS section(s). If a State DOT elects to use, in part or in whole, the equivalent data set, all reporting segment shall be referenced by HPMS section(s); and

(2) The LOTTR metric (to the nearest hundredths) for each of the four time periods identified in paragraphs (b)(1)(i) through (iv) of this section: the corresponding 80th percentile travel times (to the nearest second), the corresponding Normal (50th percentile) Travel Times (to the nearest second), and directional AADTs. If a State DOT does not elect to use FHWA supplied occupancy factor, as provided in § 490.507(d), that State DOT shall report vehicle occupancy factor (to the nearest tenth) to HPMS.

(f) Starting in 2018 and biennially thereafter, State DOTs shall report, as required in § 490.107, the GHG metrics, defined in paragraph (c) of this section. Specifically, the following GHG metric shall be reported in the State Biennial Performance Reports, as required in § 490.107:

(1) Total tailpipe CO₂ emissions, as specified in paragraph (c) of this section, generated by on-road sources travelling on the NHS (the GHG metric), and total on-road CO₂ emissions (the step in the calculation prior to

² MOVES (Motor Vehicle Emission Simulator) is EPA’s emission modeling system that estimates emissions for mobile sources at the national, county, and project level for criteria air pollutants, greenhouse gases, and air toxics. See <https://www.epa.gov/moves>.

computing the GHG metric), in each of the following calendar years:

- (i) 2017 (reported in 2018, unless FHWA states on its Web site, noted in § 490.509 (f), that there has been a change sufficient to warrant recalculation of the 2017 value); and
- (ii) The 2 years preceding the reporting years.

(2) [Reserved]

§ 490.513 Calculation of National Highway System performance measures.

(a) The NHS Performance measures in § 490.507 shall be calculated in accordance with this section by State DOTs and MPOs to carry out the Interstate System and non-Interstate NHS performance-related requirements

of this part, and by FHWA to make the significant progress determinations specified in § 490.109 and to report on system performance.

(b) The Interstate Travel Time Reliability measure specified in § 490.507(a)(1) shall be computed to the nearest tenth of a percent as follows:

$$100 \times \frac{\sum_{i=1}^R SL_i \times AV_i \times OF_j}{\sum_{i=1}^T SL_i \times AV_i \times OF_j}$$

Where:

R = total number of Interstate System reporting segments that are exhibiting an LOTTR below 1.50 during all of the time periods identified in § 490.511(b)(1)(i) through (iv);

I = Interstate System reporting segment “i”;

$$100 \times \frac{\sum_{i=1}^R SL_i \times AV_i \times OF_j}{\sum_{i=1}^T SL_i \times AV_i \times OF_j}$$

Where:

R = total number of non-Interstate NHS reporting segments that are exhibiting an LOTTR below 1.50 during all of the time periods identified in § 490.511(b)(1)(i) through (iv);

i = non-Interstate NHS reporting segment “i”;

SL_i = length, to the nearest thousandth of a mile, of non-Interstate NHS reporting segment “i”;

AV_i = total annual traffic volume to the nearest 1 vehicle, of the Interstate System reporting segment “i”;

j = geographic area in which the reporting segment “i” is located where a unique occupancy factor has been determined;

OF_j = occupancy factor for vehicles on the NHS within a specified geographic area within the State/Metropolitan planning area; and

SL_i = length, to the nearest thousandth of a mile, of Interstate System reporting segment “i”;

AV_i = total annual traffic volume to the nearest single vehicle, of the Interstate System reporting segment “i”;

J = geographic area in which the reporting segment “i” is located where a unique occupancy factor has been determined;

OF_i = occupancy factor for vehicles on the NHS within a specified geographic area within the State/Metropolitan planning area; and

T = total number of Interstate System reporting segments.

(c) The Non-Interstate Travel Time Reliability measure specified in § 490.507(a)(2) shall be computed to the nearest tenth of a percent as follows:

T = total number of non-Interstate NHS reporting segments.

(d) The GHG measure specified in § 490.507(b) shall be computed to the nearest tenth of a percent as follows:

$$\frac{(\text{Tailpipe CO}_2 \text{Emissions on NHS})_{CY} - (\text{Tailpipe CO}_2 \text{Emissions on NHS})_{2017}}{(\text{Tailpipe CO}_2 \text{Emissions on NHS})_{2017}} \times 100$$

Where:

(Tailpipe CO₂ Emissions on NHS)_{CY} = total tailpipe CO₂ emissions on the NHS in a calendar year (to the nearest thousand tons); and

(Tailpipe CO₂ Emissions on NHS)₂₀₁₇ = total tailpipe CO₂ emissions on the NHS in the calendar year 2017 (to the nearest thousand tons).

■ 4. Add subpart F to read as follows:

Subpart F—National Performance Management Measures To Assess Freight Movement on the Interstate System

Sec.

490.601 Purpose.

490.603 Applicability.

490.605 Definitions.

490.607 National performance management measures to assess freight movement on the Interstate System.

490.609 Data requirements.

490.611 Calculation of Truck Travel Time Reliability metrics.

490.613 Calculation of Freight Reliability measure.

§ 490.601 Purpose.

The purpose of this subpart is to implement the requirements of 23 U.S.C. 150(c)(6) to establish performance measures for State Departments of Transportation (State DOTs) and the Metropolitan Planning Organizations (MPOs) to use to assess the national freight movement on the Interstate System.

§ 490.603 Applicability.

The performance measures to assess the national freight movement are applicable to the Interstate System.

§ 490.605 Definitions.

The definitions in § 490.101 apply to this subpart.

§ 490.607 National performance management measures to assess freight movement on the Interstate System.

The performance measure to assess freight movement on the Interstate System is the: Truck Travel Time Reliability (TTTR) Index (referred to as the Freight Reliability measure).

§ 490.609 Data requirements.

(a) Travel time data needed to calculate the Freight Reliability measure in § 490.607 shall come from the travel time data set, as specified in § 490.103(e).

(b) State DOTs, in coordination with MPOs, shall define reporting segments in accordance with § 490.103(f). Reporting segments must be contiguous so that they cover the full extent of the directional mainline highways of the Interstate in the State.

(c) When truck travel times are not available in the travel time data set (data not reported, or reported as “0” or null) as specified in § 490.611(a)(1)(ii) for a given 15 minute interval, State DOTs shall replace the missing travel time with an observed travel time that represents all traffic on the roadway during the same 15 minute interval (“all vehicles” in NPMRDS nomenclature).

(d) If an NHS roadway is closed, the State DOT is not required to include those time periods for those segments of

road in the calculations required for the Freight Reliability metric/measure.

§ 490.611 Calculation of Truck Travel Time Reliability metrics.

(a) The State DOT shall calculate the TTTR Index metric (referred to as the TTTR metric) for each Interstate System reporting segment in accordance with the following:

(1) A truck travel time data set shall be created from the travel time data set to be used to calculate the TTTR metric. This data set shall include, for each reporting segment, a ranked list of average truck travel times, to the nearest second, for 15 minute periods of a 24-hour period for an entire calendar year that:

(i) Includes “AM Peak” travel times occurring between the hours of 6 a.m. and 10 a.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year;

(ii) Includes “Mid Day” travel times occurring between the hours of 10 a.m. and 4 p.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year;

(iii) Includes “PM Peak” travel times occurring between the hours of 4 p.m. and 8 p.m. for every weekday (Monday–Friday) from January 1st through December 31st of the same year;

(iv) Includes “Overnight” travel times occurring between the hours of 8 p.m. and 6 a.m. for every day (Sunday–Saturday) from January 1st through December 31st of the same year; and

(v) Includes “Weekend” travel times occurring between the hours of 6 a.m. and 8 p.m. for every weekend day (Saturday–Sunday) from January 1st through December 31st of the same year.

(2) The Normal Truck Travel Time (50th percentile) shall be determined from each of the truck travel time data sets defined under paragraph (a)(1) of this section as the time in which 50 percent of the times in the data set are shorter in duration and 50 percent are longer in duration. The 95th percentile truck travel time shall be determined from each of the truck travel time data sets defined under paragraph (a)(1) of this section as the time in which 95 percent of the times in the data set are shorter in duration. Both the Normal and 95th percentile truck travel times can be determined by plotting the data on a travel time cumulative probability distribution graph or using the percentile functions available in spreadsheet and other analytical tools.

(3) Five TTTR metrics shall be calculated for each reporting segment; one for each data set defined under paragraph (a)(1) of this section as the 95th percentile travel time divided by

the Normal Truck Travel Time and rounded to the nearest hundredth.

(b) Starting in 2018 and annually thereafter, State DOTs shall report the TTTR metrics, as defined in this section, in accordance with the HPMS Field Manual by June 15th of each year for the previous year’s Freight Reliability measures.

(1) All metrics shall be reported to HPMS by reporting segments. When the NPMRDS is used metrics shall be referenced by NPMRDS TMC(s) or HPMS section(s). If a State DOT elects to use, in part or in whole, the equivalent data set, all reporting segment shall be referenced by HPMS section(s).

(2) The TTTR metric shall be reported to HPMS for each reporting segment (to the nearest hundredths) for each of the five time periods identified in paragraphs (a)(1)(i) through (v) of this section; the corresponding 95th percentile travel times (to the nearest second) and the corresponding normal (50th percentile) travel times (to the nearest second).

§ 490.613 Calculation of Freight Reliability measure.

(a) The performance for freight movement on the Interstate in § 490.607 (the Freight Reliability measure) shall be calculated in accordance with this section by State DOTs and MPOs to carry out the freight movement on the Interstate System related requirements of this part, and by FHWA to make the significant progress determinations specified in § 490.109 and to report on freight performance of the Interstate System.

(b) The Freight Reliability measure shall be computed to the nearest hundredth as follows:

$$\frac{\sum_{i=1}^T (SL_i \times \max TTTR_i)}{\sum_{i=1}^T (SL_i)}$$

Where:

i = An Interstate System reporting segment;
 $\max TTTR_i$ = The maximum TTTR of the five time periods in paragraphs (a)(1)(i) through (v) of § 490.611, to the nearest hundredth, of Interstate System reporting segment “ i ”;

SL_i = Segment length, to the nearest thousandth of a mile, of Interstate System reporting segment “ i ”; and
 T = A total number of Interstate System reporting segments.

■ 5. Add subpart G to read as follows:

Subpart G—National Performance Management Measure for Assessing the Congestion Mitigation and Air Quality Improvement Program—Traffic Congestion

Sec.

490.701 Purpose.

490.703 Applicability.

490.705 Definitions.

490.707 National performance management measure for traffic congestion.

490.709 Data requirements.

490.711 Calculation of Peak Hour Excessive Delay metric.

490.713 Calculation of Traffic Congestion measures.

§ 490.701 Purpose.

The purpose of this subpart is to implement the requirements of 23 U.S.C. 150(c)(5)(A) to establish performance measures for State DOTs and the MPOs to use in assessing CMAQ Traffic Congestion for the purpose of carrying out the CMAQ program.

§ 490.703 Applicability.

The CMAQ Traffic Congestion performance measures are applicable to all urbanized areas that include NHS mileage and with a population over 1 million for the first performance period and in urbanized areas with a population over 200,000 for the second and all other performance periods, that are, in all or part, designated as nonattainment or maintenance areas for ozone (O₃), carbon monoxide (CO), or particulate matter (PM₁₀ and PM_{2.5}) National Ambient Air Quality Standards (NAAQS).

§ 490.705 Definitions.

All definitions in § 490.101 apply to this subpart. Unless otherwise specified, the following definitions apply in this subpart:

Excessive delay means the extra amount of time spent in congested conditions defined by speed thresholds that are lower than a normal delay threshold. For the purposes of this rule, the speed threshold is 20 miles per hour (mph) or 60 percent of the posted speed limit, whichever is greater.

Peak Period is defined as weekdays from 6 a.m. to 10 a.m. and either 3 p.m. to 7 p.m. or 4 p.m. to 8 p.m. State DOTs and MPOs may choose whether to use 3 p.m. to 7 p.m. or 4 p.m. to 8 p.m.

§ 490.707 National performance management measures for traffic congestion.

There are two performance measures to assess traffic congestion for the purpose of carrying out the CMAQ program (referred to collectively as the CMAQ Traffic Congestion measures. They are:

(a) Annual Hours of Peak Hour Excessive Delay (PHED) Per Capita (referred to as the PHED measure); and

(b) Percent of Non-SOV Travel.

§ 490.709 Data requirements.

(a) Travel time data needed to calculate the PHED measure in § 490.707(a) shall come from the travel time data set, as specified in § 490.103(e).

(b) State DOTs, in coordination with MPOs, shall define reporting segments in accordance with § 490.103(f). Reporting segments must be contiguous so that they cover the full extent of the directional mainline highways of the NHS in the urbanized area(s).

(c) State DOTs shall develop hourly traffic volume data for each reporting segment as follows:

(1) State DOTs shall measure or estimate hourly traffic volumes for Peak Periods on each weekday of the reporting year by using either paragraph (c)(1)(i) or (ii) of this section.

(i) State DOTs may use hourly traffic volume counts collected by continuous count stations and apply them to multiple reporting segments; or

(ii) State DOTs may use Annual Average Daily Traffic (AADT) reported to the HPMS to estimate hourly traffic volumes when no hourly volume counts exist. In these cases the AADT data used should be the most recently available, but not more than 2 years older than the reporting period (e.g., if reporting for calendar year 2018, AADT should be from 2016 or 2017) and should be split to represent the appropriate direction of travel of the reporting segment.

(2) State DOTs shall assign hourly traffic volumes to each reporting segment by hour (e.g., between 8 a.m. and 8:59 a.m.).

(3) State DOTs shall report the methodology they use to develop hourly traffic volume estimates to FHWA no later than 60 days before the submittal of the first Baseline Performance Period Report.

(4) If a State DOT elects to change the methodology it reported under paragraph (c)(3) of this section, then the State DOT shall submit the changed methodology no later than 60 days before the submittal of next State Biennial Performance Report required in § 490.107(b).

(5) If an NHS roadway is closed, the State DOT is not required to include those time periods for the segment of road in the calculation required for this metric and measure.

(d) State DOTs shall develop annual vehicle classification data for each reporting segment using data as follows:

(1) State DOTs shall measure or estimate the percentage of cars, buses, and trucks, relative to total AADT for each segment using either paragraph (d)(1)(i) or (ii) of this section.

(i) State DOTs may use annual traffic volume counts collected by continuous count stations to estimate the annual percent share of traffic volumes for cars, buses, and trucks for each segment; or

(ii) State DOTs may use AADT reported to the HPMS to estimate the annual percent share of traffic volumes for cars, buses, and trucks, where:

(A) Buses = value in HPMS Data Item "AADT_Single_Unit";

(B) Trucks = value in HPMS Data Item "AADT_Combination"; and

(C) Cars = subtract values for Buses and Trucks from the value in HPMS Data Item "AADT".

(iii) If a State DOT uses the data reported to the HPMS in paragraph (d)(1)(ii) of this section, then the data values should be split to represent the appropriate direction of travel of the reporting segment.

(2) State DOTs shall report the methodology they use to develop annual percent share of traffic volume by vehicle class to FHWA no later than 60 days before the submittal of the first Baseline Performance Period Report.

(3) If a State DOT elects to change the methodology it reported under paragraph (d)(2) of this section, then the State DOT shall submit the changed methodology no later than 60 days before the submittal of next State Biennial Performance Report required in § 490.107(b).

(e) State DOTs shall develop annual average vehicle occupancy (AVO) factors for cars, buses, and trucks in applicable urbanized areas using either method under paragraph (e)(1)(i) or (ii) of this section.

(1) State DOTs shall measure or estimate annual vehicle occupancy factors for cars, buses, and trucks in applicable urbanized areas.

(i) State DOTs shall use estimated annual vehicle occupancy factors for cars, buses, and trucks in urbanized areas provided by FHWA; and/or

(ii) State DOTs may use an alternative estimate of annual vehicle occupancy factors for a specific reporting segment(s) for cars, buses, and trucks in urbanized areas, provided that it is more specific than the data provided by FHWA.

(f) All State DOTs and MPOs contributing to the unified target for the applicable area as specified in § 490.105(d)(2) shall agree to using one of the methods specified in paragraph (f)(1)(i), (ii), or (iii) of this section to identify the data that will be used to determine the Percent of Non-SOV Travel for the applicable urbanized area.

(1) The data to determine the Percent of Non-SOV Travel measure shall be

developed using any one of the following methods.

(i) *Method A—American Community Survey.* Populations by predominant travel to commute to work may be identified from Table DP03 of the American Community Survey using the totals by transportation mode listed within the "Commuting to Work" subject heading under the "Estimate" column of the table. The "5 Year Estimate" DP03 table using a geographic filter that represents the applicable "Urban Area" shall be used to identify these populations. The Percent of Non-SOV Travel measure shall be developed from the most recent data as of August 15th of the year in which the State Biennial Performance Report is due to FHWA.

(ii) *Method B—local survey.* The Percent of Non-SOV Travel may be estimated from a local survey focused on either work travel or household travel for the area and conducted as recently as 2 years before the beginning of the performance period. The survey method shall estimate travel mode choice for the full urbanized area using industry accepted methodologies and approaches resulting in a margin of error that is acceptable to industry standards, allow for updates on at least a biennial frequency, and distinguish non-SOV travel occurring in the area as a percent of all work or household travel.

(iii) *Method C—system use measurement.* The volume of travel using surface modes of transportation may be estimated from measurements of actual use of each transportation mode. Sample or continuous measurements may be used to count the number of travelers using different surface modes of transportation. The method used to count travelers shall estimate the total volume of annual travel for the full urbanized area within a margin of error that is acceptable to industry standards and allows for updates on at least a biennial frequency. The method shall include sufficient information to calculate the amount of non-SOV travel occurring in the area as a percentage of all surface transportation travel. State DOTs are encouraged to report use counts to FHWA that are not included in currently available national data sources.

(2) State DOTs shall report the data collection method that is used to determine the Percent of Non-SOV Travel measure for each applicable urbanized area in the State to FHWA in their first Baseline Performance Period Report required in § 490.107(b)(1). The State DOT shall include sufficient detail to understand how the data are

collected if either Method B or Method C are used for the urbanized area. This method shall be used for the full performance period for each applicable urbanized area.

(3) If State DOTs and MPOs that contribute to an applicable urbanized area elect to change the data collection method reported under paragraph (f)(2) of this section, then each respective State DOT shall report this change in their next Baseline Performance Report required in § 490.107(b)(1). The new method reported as a requirement of this paragraph shall not be used until the beginning of the next performance period for the Baseline Performance Report in which the method was reported to be changed.

(g) Populations of urbanized areas shall be as identified based on the most recent annual estimates published by the U.S. Census available 1 year before the State DOT Baseline Performance Period Report is due to FHWA to identify applicability of the CMAQ Traffic Congestion measures in § 490.707(a) and (b) for each performance period, as described in § 490.105(e)(8)(iii)(D) and (f)(5)(iii)(D). For computing the PHED measure in § 490.713(b), the most recent annual

population estimate published by the U.S. Census, at the time when the State DOT Biennial Performance Period Report is due to FHWA shall be used.

(h) Nonattainment and maintenance area determinations for the CMAQ Traffic Congestion measures:

(1) The CMAQ Traffic Congestion measures apply to nonattainment and maintenance areas. Such areas shall be identified based on the effective date of U.S. EPA's designations under the NAAQS in 40 CFR part 81, as of the date 1 year before the State DOT Baseline Performance Period Report is due to FHWA.

(2) The nonattainment and maintenance areas to which the CMAQ Traffic Congestion measures applies shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA, the area is no longer in nonattainment or maintenance for a criteria pollutant included in § 490.703.

§ 490.711 Calculation of Peak Hour Excessive Delay metric.

(a) The performance metric required to calculate the measure specified in § 490.707(a) is Total Peak Hour Excessive Delay (person-hours)(referred to as the PHED metric). The following

paragraphs explain how to calculate this PHED metric.

(b) State DOTs shall use the following data to calculate the PHED metric:

(1) Travel times of all traffic ("all vehicles" in NPMRDS nomenclature) during each 15 minute interval for all applicable reporting segments in the travel time data set occurring for peak periods from January 1st through December 31st of the same year;

(2) The length of each applicable reporting segment, reported as required under § 490.709(b);

(3) Hourly volume estimation for all days and for all reporting segments where excessive delay is measured, as specified in § 490.709(c);

(4) Annual vehicle classification data for all days and for all reporting segments where excessive delay is measured, as specified in § 490.709(d); and

(5) Annual vehicle occupancy factors for cars, buses, and trucks for all days and for all reporting segments where excessive delay is measured, as specified in § 490.709(e).

(c) The State DOT shall calculate the "excessive delay threshold travel time" for all applicable travel time segments as follows:

Excessive Delay Threshold Travel Time_s

$$= \left(\frac{\text{Travel Time Segment Length}_s}{\text{Threshold Speed}_s} \right) \times 3,600$$

Where:

Excessive Delay Threshold Travel Time_s = the time of travel, to the nearest whole second, to traverse the Travel Time Segment at which any longer measured travel times would result in excessive delay for the travel time segment "s";

Travel Time Segment Length_s = total length of travel time segment to the nearest thousandth of a mile for travel time reporting segment "s"; and

Threshold Speed_s = the speed of travel at which any slower measured speeds would result in excessive delay for travel time reporting segment "s." As defined in § 490.705, the speed threshold is 20 miles per hour (mph) or 60 percent of the posted speed limit travel time reporting segment "s," whichever is greater.

(d) State DOTs shall determine the "excessive delay" for each 15 minute

bin of each reporting segment for every hour and every day in a calendar year as follows:

(1) The travel time segment delay (RSD) shall be calculated to the nearest whole second as follow:

$$RSD_{s,b} - \text{Excessive Delay Threshold Travel Time}_s \text{ and } RSD_{s,b} \leq 900 \text{ seconds}$$

Where:

RSD_{s,b} = travel time segment delay, calculated to the nearest whole second, for a 15-minute bin "b" of travel time reporting segment "s" for in a day in a calendar year. RSD(s)_b not to exceed 900 seconds;

Travel time_{s,b} = a measured travel time, to the nearest second, for 15-minute time bin "b" recorded for travel time reporting segment "s";

Excessive Delay Threshold Travel Time_s =

The maximum amount of time, to the nearest second, for a vehicle to traverse through travel time segment "s" before excessive delay would occur, as specified in paragraph (c) of this section;

b = a 15-minute bin of a travel time reporting segment "s"; and

s = a travel time reporting segment.

(2) Excessive delay, the additional amount of time to traverse a travel time segment in a 15-minute bin as compared to the time needed to traverse the travel time segment when traveling at the excessive delay travel speed threshold, shall be calculated to the nearest thousandths of an hour as follows:

$$\text{Excessive Delay}_{s,b} = \begin{cases} \frac{RSD_{s,b}}{3,600} & \text{when } RSD_{s,b} \geq 0 \\ \text{or} \\ 0 & \text{when } RSD_{s,b} < 0 \end{cases}$$

Where:

Excessive Delay_{s,b} = excessive delay, calculated to the nearest thousandths of an hour, for 15-minute bin “b” of travel time reporting segment “s”;

RSD_{s,b} = the calculated travel time reporting segment delay for fifteen minute bin “b” of a travel time reporting segment “s,” as described in paragraph (d)(1) of this section;
b = a fifteen minute bin of a travel time reporting segment “s”; and

s = a travel time reporting segment.

(e) State DOTs shall use the hourly traffic volumes as described in § 490.709(c) to calculate the PHED metric for each reporting segment as follows:

Total Excessive Delay_s

= AVO

$$\times \sum_{d=1}^{TD} \left\{ \sum_{h=1}^{TH} \left[\sum_{b=1}^{TB} \left(\text{Excessive Delay}_{s,b,h,d} \times \left(\frac{\text{hourly volume}}{4} \right)_{s,h,d} \right) \right] \right\}_d$$

Where:

Total Excessive Delay_s (in person-hours) = the sum of the excessive delay, to the nearest thousandths, for all traffic traveling through single travel time reporting segment “s” on NHS within an urbanized area, specified in § 490.703, accumulated over the full reporting year;

AVO = Average Vehicle Occupancy;

s = a travel time reporting segment;

d = a day of the reporting year;

TD = total number of days in the reporting year;

h = single hour interval of the day where the first hour interval is 12 a.m. to 12:59 a.m.;

TH = total number of hour intervals in day “h”;

b = 15-minute bin for hour interval “h”;

TB = total number of 15-minute bins where travel times are recorded in

the travel time data set for hour interval “h”;

Excessive Delay_{s,b,h,d} = calculated excessive travel time, in hundredths of an hour, for 15 minute bin (b), hour interval (h), day (d), and travel time segment (s), as described in paragraph (d)(2) of this section; and

$$\left(\frac{\text{hourly volume}}{4} \right)_{s,h,d}$$

Where the equation equals hourly traffic volume, to the nearest tenth, for hour interval “h” and day “d” that corresponds to 15-minute bin “b” and travel time reporting segment “s” divided by 4. For example, the 9 a.m. to 9:15 a.m. minute bin would be assigned one fourth of the hourly traffic volume for the 9 a.m. to 9:59 a.m. hour on the roadway in which travel time segment is included;

$$AVO = (P_C \times AVO_C) + (P_B \times AVO_B) + (P_T \times AVO_T)$$

Where:

P_C = the percent of cars as a share of total AADT on the segment as specified in § 490.709(d);

P_B = the percent of buses as a share of total AADT on the segment as specified in § 490.709(d);

P_T = the percent of trucks as a share of total AADT on the segment as specified in § 490.709(d);

AVO_C = the average vehicle occupancy of cars as specified in § 490.709(e);

AVO_B = the average vehicle occupancy of buses as specified in § 490.709(e); and

AVO_T = the average vehicle occupancy of trucks as specified in § 490.709(e).

(f) Starting in 2018 and annually thereafter, State DOTs shall report the PHED metric (to the nearest one hundredth hour) in accordance with HPMS Field Manual by June 15th of each year for the previous year’s PHED measures. The PHED metric shall be reported for each reporting segment. All reporting segments of the NPMRDS shall be referenced by NPMRDS TMC or HPMS section(s). If a State DOT elects to use, in part or in whole, the equivalent data set, all reporting segments shall be referenced by HPMS sections.

§ 490.713 Calculation of Traffic Congestion measures.

(a) The performance measures in § 490.707 shall be computed in accordance with this section by State DOTs and MPOs to carry out CMAQ traffic congestion performance-related requirements of this part and by FHWA to report on traffic congestion performance.

(b) The performance measure for CMAQ traffic congestion specified in § 490.707, Annual Hours of Peak Hour Excessive Delay Per Capita (the PHED measure), shall be computed to the nearest tenth, and by summing the PHED metrics of all reporting segments in each of the urbanized area, specified in § 490.703, and dividing it by the population of the urbanized area to produce the PHED measure. The equation for calculating the PHED measure is as follows:

Annual Hours of Peak Hour Excessive Delay per Capita

$$= \frac{\sum_{s=1}^T \text{Total Excessive Delays}_s}{\text{Total Population}}$$

Where:

Annual Hours of Peak Hour Excessive Delay per Capita = the cumulative hours of excessive delay, to the nearest tenth, experienced by all people traveling through all reporting segments during peak hours in the applicable urbanized area for the full reporting calendar year;

s = travel time reporting segment within an urbanized area, specified in § 490.703;

T = total number of travel time reporting segments in the applicable urbanized area;

Total Population = total hours of excessive delay in § 490.711(e) for all people traveling through travel time reporting segment “s” during a calendar year (as defined in § 490.711(f)); and

Total Population = the total population in the applicable urbanized area from the most recent annual population published by the U.S. Census at the time that the State Biennial Performance Period Report is due to FHWA.

(c) Calculation for the PHED measure, described in paragraph (b) of this section, and target establishment for the measure shall be phased-in under the

requirements in § 490.105(e)(8)(vi) and (f)(5)(vi).

(d) The performance measure for CMAQ traffic congestion specified in § 490.707(b), Percent of Non-SOV Travel, shall be computed as specified in paragraphs (d)(1) through (3) of this section corresponding to the method reported by the State DOT to collect travel data for the applicable area under § 490.709(f)(2).

(1) *Method A—American Community Survey.* The Percent of Non-SOV Travel shall be calculated to the nearest tenth of a percent using the following formula:

$$\text{Percent of Non-SOV Travel} = 100\% - \% \text{ SOV}$$

Where:

Percent of Non-SOV Travel = percent of commuting working population, to the nearest tenth of a percent, that predominantly do not commute by driving alone in a car, van, or truck,

including travel avoided by telecommuting; and

% SOV = percent estimate for “Car, truck, or van—drive alone”.

(2) *Method B—local survey.* The Percent of Non-SOV Travel shall be calculated using the data derived from local survey results as specified in § 490.709(f)(1)(ii). The Percent of Non-SOV Travel measure shall be calculated to represent travel that is not occurring by driving alone in a motorized vehicle, including travel avoided by telecommuting, as a percentage of all surface transportation occurring in the applicable area. The Percent of Non-SOV Travel measure shall be calculated to the nearest tenth of a percent.

(3) *Method C—system use measurement.* The Percent of Non-SOV Travel shall be calculated to the nearest tenth of a percent from the data collected from system use measurements as specified in § 490.709(f)(1)(iii) using the general form of the following formula:

$$\text{Percent of Non-SOV Travel} = 100 \times \left(\frac{\text{Volume}_{\text{non-sov}}}{(\text{Volume}_{\text{non-sov}}) + (\text{Volume}_{\text{sov}})} \right)$$

Where:

Percent of Non-SOV Travel = percentage of travel, to the nearest tenth of a percent, that is not occurring by driving alone in a motorized vehicle, including travel avoided by telecommuting

Volume_{non-sov} Volume = Annual volume of person travel occurring while driving alone in a motorized vehicle; and

Volume_{sov} = Annual volume of person travel occurring on modes other than driving alone in a motorized vehicle, calculated as:

$$\sum_{m=1}^t \text{Volume}_m$$

Where:

m = travel mode (modes other than driving alone in a motorized vehicle, including travel avoided by telecommuting);

Volume_m = annual volume of person travel for each mode, “m”; and

t = total number of modes that are not driving alone in a motorized vehicle.

■ 6. Add a new subpart H to read as follows:

Subpart H- National Performance Management Measures to Assess the Congestion Mitigation and Air Quality Improvement Program—On-Road Mobile Source Emissions

Sec.

490.801 Purpose.

490.803 Applicability.

490.805 Definitions.

490.807 National performance management measure for assessing on-road mobile source emissions for the purposes of the Congestion Mitigation and Air Quality Improvement Program.

490.809 Data requirements.

490.811 Calculation of Total Emissions Reduction measure.

§ 490.801 Purpose.

The purpose of this subpart is to implement the requirements of 23 U.S.C. 150(c)(5)(B) to establish performance measures for State DOTs and the MPOs to use in assessing on-road mobile source emissions.

§ 490.803 Applicability.

(a) The on-road mobile source emissions performance measure (called the Total Emissions Reduction- see

§ 490.807) is applicable to all States and MPOs with projects financed with funds from the 23 U.S.C. 149 CMAQ program apportioned to State DOTs for areas designated as nonattainment or maintenance for ozone (O₃), carbon monoxide (CO), or particulate matter (PM₁₀ and PM_{2.5}) National Ambient Air Quality Standards (NAAQS).

(b) This performance measure does not apply to States and MPOs that do not contain any portions of nonattainment or maintenance areas for the criteria pollutants identified in paragraph (a) of this section.

§ 490.805 Definitions.

All definitions in § 490.101 apply to this subpart. Unless otherwise specified in this subpart, the following definitions apply in this subpart:

On-road mobile source means, within this part, emissions created by all projects and sources financed with funds from the 23 U.S.C. 149 CMAQ program.

§ 490.807 National performance management measure for assessing on-road mobile source emissions for the purposes of the Congestion Mitigation and Air Quality Improvement Program.

The performance measure for the purpose of carrying out the CMAQ Program and for State DOTs to use to assess on-road mobile source emissions is “Total Emissions Reduction,” which is the 2-year and 4-year cumulative reported emission reductions, for all projects funded by CMAQ funds, of each criteria pollutant and applicable precursors (PM_{2.5}, PM₁₀, CO, VOC, and NOx) under the CMAQ program for which the area is designated nonattainment or maintenance.

§ 490.809 Data requirements.

- (a) The data needed to calculate the Total Emission Reduction measure shall come from the CMAQ Public Access System and includes:
- (1) The applicable nonattainment or maintenance area;
- (2) The applicable MPO; and

(3) The emissions reduction estimated for each CMAQ funded project for each of the applicable criteria pollutants and their precursors for which the area is nonattainment or maintenance.

- (b) The State DOT shall:
- (1) Enter project information into the CMAQ project tracking system for each CMAQ project funded in the previous fiscal year by March 1st of the following fiscal year; and
- (2) Extract the data necessary to calculate the Total Emissions Reduction measures as it appears in the CMAQ Public Access System on July 1st for projects obligated in the prior fiscal year.
- (c) Nonattainment and maintenance area determinations for the CMAQ Total Emissions Reduction measure:
- (1) The CMAQ Total Emissions Reduction measure applies to nonattainment and maintenance areas. Such areas shall be identified based on the effective date of U.S. EPA’s designations under the NAAQS in 40 CFR part 81, as of the date 1 year before

the State DOT Baseline Performance Period Report is due to FHWA.

(2) The nonattainment and maintenance areas to which the Total Emissions Reduction measure applies shall be revised if, on the date 1 year before the State DOT Mid Performance Period Progress Report is due to FHWA, the area is no longer in nonattainment or maintenance for a pollutant included in § 490.803.

§ 490.811 Calculation of Total Emissions Reduction measure.

- (a) The Total Emission Reductions performance measure specified in § 490.807 shall be calculated in accordance with this section by State DOTs and MPOs to carry out CMAQ on-road mobile source emissions performance-related requirements of this part.
- (b) The Total Emission Reductions measure for each of the criteria pollutant or applicable precursor for all projects reported to the CMAQ Public Access System shall be calculated to the nearest one thousandths, as follows:

Total Emission Reduction_p

$$= \sum_{i=1}^T \text{Daily Kilograms of Emission Reductions}_{p,i}$$

Where:

i = applicable projects reported in the CMAQ Public Access System for the first 2 Federal fiscal years of a performance period and for the entire performance period, as described in in § 490.105(e)(4)(i)(B);

p = criteria pollutant or applicable precursor: PM_{2.5}, PM₁₀, CO, VOC, or NOx;

Daily Kilograms of Emission Reductions_{p,i} = total daily kilograms, to the nearest one

thousandths, of reduced emissions for a criteria pollutant or an applicable precursor “p” in the in the first year the project is obligated;

T = total number of applicable projects reported to the CMAQ Public Access System for the first 2 Federal fiscal years of a performance period and for the entire performance period, as described in § 490.105(e)(4)(i)(B); and

Total Emission Reduction_p = cumulative reductions in emissions over 2 and 4 Federal fiscal years, total daily kilograms, to the nearest one thousandths, of reduced emissions for criteria pollutant or precursor “p.”

Department of Health and Human Services

42 CFR Part 2

Confidentiality of Substance Use Disorder Patient Records; Final Rule

DEPARTMENT OF HEALTH AND HUMAN SERVICES

Office of the Secretary

42 CFR Part 2

[SAMHSA–4162–20]

RIN 0930–AA21

Confidentiality of Substance Use Disorder Patient Records

AGENCY: Substance Abuse and Mental Health Services Administration, HHS.

ACTION: Final rule.

SUMMARY: The Department of Health and Human Services (HHS) is issuing this final rule to update and modernize the Confidentiality of Alcohol and Drug Abuse Patient Records regulations and facilitate information exchange within new health care models while addressing the legitimate privacy concerns of patients seeking treatment for a substance use disorder. These modifications also help clarify the regulations and reduce unnecessary burden.

DATES: *Effective date:* This final rule is effective February 17, 2017.

FOR FURTHER INFORMATION CONTACT: Danielle Tarino, Telephone number: (240) 276–2857, Email address: PrivacyRegulations@samhsa.hhs.gov.

I. Executive Summary

A. Purpose of the Regulatory Action

The laws and regulations governing the confidentiality of substance use disorder records were written out of great concern about the potential use of substance use disorder information against individuals, causing individuals with substance use disorders not to seek needed treatment. The disclosure of records of individuals with substance use disorders has the potential to lead to a host of negative consequences, including: Loss of employment, loss of housing, loss of child custody, discrimination by medical professionals and insurers, arrest, prosecution, and incarceration. The purpose of the regulations at title 42 of the Code of Federal Regulations (CFR) part 2 (42 CFR part 2) is to ensure that a patient receiving treatment for a substance use disorder in a part 2 program is not made more vulnerable by reason of the availability of their patient record than an individual with a substance use disorder who does not seek treatment. Now, more than 29 years since the part 2 regulations were last substantively amended, this final rule makes policy changes to the regulations to better align them with advances in the U.S. health care delivery system while retaining important privacy protections.

Need for Regulatory Action

The last substantive update to these regulations was in 1987. Over the last 29 years, significant changes have occurred

within the U.S. health care system that were not envisioned by the current (1987) regulations, including new models of integrated care that are built on a foundation of information sharing to support coordination of patient care, the development of an electronic infrastructure for managing and exchanging patient information, and a new focus on performance measurement within the health care system. SAMHSA wants to ensure that patients with substance use disorders have the ability to participate in, and benefit from health system delivery improvements, including from new integrated health care models while providing appropriate privacy safeguards. These new integrated models are foundational to HHS's delivery system reform goals of better care, smarter spending, and healthier people.

Legal Authority for Regulatory Action

This final rule revises 42 CFR part 2, Confidentiality of Alcohol and Drug Abuse Patient Records regulations. The authorizing statute, Title 42, United States Code (U.S.C.) 290dd–2, protects the confidentiality of the records containing the identity, diagnosis, prognosis, or treatment of any patient that are maintained in connection with the performance of any federally assisted program or activity relating to substance abuse (now referred to as substance use disorder) education, prevention, training, treatment, rehabilitation, or research. Title 42 of the CFR part 2 was first promulgated in 1975 (40 FR 27802) and last substantively updated in 1987 (52 FR 21796).

B. Summary of the Major Provisions

Proposed modifications to 42 CFR part 2 were published as a Notice of Proposed Rulemaking (NPRM) on February 9, 2016 (81 FR 6988). After consideration of the public comments received in response to the NPRM, SAMHSA is issuing this final rule amending 14 major provisions of 42 CFR part 2, as follows:

Statutory authority for confidentiality of substance use disorder patient records (§ 2.1) combines old § 2.1 (Statutory authority for confidentiality of drug abuse patient records), and § 2.2 (Statutory authority for confidentiality of alcohol abuse patient records) and deleting references to 42 U.S.C. 290ee–3 and 42 U.S.C. 290dd–3, as these U.S.C. sections were omitted by Public Law 102–321 and combined and renamed into Section 290dd–2, Confidentiality of records. Because SAMHSA combined former §§ 2.1 and

2.2 into § 2.1, we redesignated §§ 2.2 through 2.5 accordingly.

Reports of violations (§ 2.4) revises the requirement for reporting violations of these regulations by methadone programs (now referred to as opioid treatment programs) to the Food and Drug Administration (FDA) because the authority over these programs was transferred from the FDA to the Substance Abuse and Mental Health Services Administration (SAMHSA) in 2001.

Definitions (§ 2.11) revises some existing definitions, adds new definitions of key terms that apply to 42 CFR part 2, and consolidates all but one of the definitions that are currently in other sections into § 2.11 (e.g., the definition of “Minor” previously found in § 2.14(a)). We revised the definitions of “Central registry,” “Disclose or disclosure,” “Maintenance treatment,” “Member program,” “Patient,” “Patient identifying information,” “Person,” “Program,” “Qualified service organization (QSO),” “Records,” and “Treatment.” We also added definitions of “Part 2 program,” “Part 2 program director,” “Substance use disorder,” “Treating provider relationship,” and “Withdrawal management,” some of which replaced existing definitions. In addition, SAMHSA revised the regulatory text to use terminology in a consistent manner. The following definitions were not revised substantively: “Diagnosis,” “Informant,” “Minor,” “Third-party payer,” and “Undercover agent.”

Applicability (§ 2.12) continues to apply the 42 CFR part 2 regulations to a program that is federally assisted and holds itself out as providing, and provides, substance use disorder diagnosis, treatment, or referral for treatment. Most changes to the applicability of the part 2 regulations result from SAMHSA's decision not to finalize one of its proposed changes to the definition of “Program” (*see* § 2.11, *Definitions*). Whereas the NPRM definition of “Program” included, under certain conditions, “general medical practices” in addition to “general medical facilities,” the definition in this final rule is limited to “general medical facilities.” However, consistent with the NPRM, the definition of “Program” continues to use the term “general medical facility” rather than both “general medical facility” and “general medical care facility” that were used interchangeably in the 1987 final rule definition of “Program.” For example, an identified unit within a general medical facility is subject to part 2 if it holds itself out as providing, and provides, substance use disorder

diagnosis, treatment, or referral for treatment. In addition, if the primary function of medical personnel or other staff in a general medical facility is the provision of such services and they are identified as providing such services, they are considered a "Program" and, thus, subject to part 2. This final rule revises § 2.12(d)(2)(i)(C) so that restrictions on disclosures also apply to individuals or entities who receive patient records from other lawful holders of patient identifying information, such that patient records subject to the part 2 regulations include substance use disorder records maintained by part 2 programs, as well as those records in the possession of "other lawful holders of patient identifying information."

Confidentiality restrictions and safeguards (§ 2.13) adds a requirement that, upon request, patients who have included a general designation in the "To Whom" section of their consent form (*see* § 2.31) must be provided a list of entities (referred to as a List of Disclosures) to which their information has been disclosed pursuant to the general designation.

Security for records (§ 2.16) clarifies that this section requires both part 2 programs and other lawful holders of patient identifying information to have in place formal policies and procedures addressing security, including sanitization of associated media, for both paper and electronic records.

Disposition of records by discontinued programs (§ 2.19) addresses both paper and electronic records. SAMHSA also added requirements for sanitizing associated media.

In Section I., Notice to Patients of Federal Confidentiality Requirements (§ 2.22), SAMHSA clarifies that the written summary of federal law and regulations may be provided to patients in either paper or electronic format. SAMHSA also revised § 2.22 to require the statement regarding the reporting of violations include contact information for the appropriate authorities.

Consent requirements (§ 2.31) permits, in certain circumstances, a patient to include a general designation in the "To Whom" section of the consent form, in conjunction with requirements that the consent form include an explicit description of the amount and kind of substance use disorder treatment information that may be disclosed. SAMHSA decided not to finalize its proposed changes to the "From Whom" section, but did make minor updates to the terminology in the text. SAMHSA also revised § 2.31 to require the part 2 program or other

lawful holder of patient identifying information to include a statement on the consent form when using a general designation in the "To Whom" section of the consent form that patients have a right to obtain, upon request, a list of entities to which their information has been disclosed pursuant to the general designation (*see* § 2.13). In addition, SAMHSA revised § 2.31 to permit electronic signatures to the extent that they are not prohibited by any applicable law.

In Section K., Prohibition on Re-disclosure (§ 2.32), SAMHSA clarifies that the prohibition on re-disclosure only applies to information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, such as indicated through standard medical codes, descriptive language, or both, and allows other health-related information shared by the part 2 program to be re-disclosed, if permissible under other applicable laws.

Disclosures to prevent multiple enrollments (§ 2.34) modernizes the terminology and definitions and moves the definitions to § 2.11 (Definitions).

Medical emergencies (§ 2.51) revises the medical emergency exception to make it consistent with the statutory language and to give providers more discretion to determine when a "bona fide medical emergency" exists.

Research (§ 2.52) revises the research exception to permit data protected by 42 CFR part 2 to be disclosed to qualified personnel for the purpose of conducting scientific research by a part 2 program or any other individual or entity that is in lawful possession of part 2 data if the researcher provides documentation of meeting certain requirements related to other existing protections for human research. SAMHSA also revised § 2.52 to address data linkages to enable researchers holding part 2 data to obtain linkages to other datasets, provided that appropriate safeguards are in place as outlined in section 2.52.

Audit and evaluation (§ 2.53) modernizes the requirements to include provisions governing both paper and electronic patient records. SAMHSA also revised § 2.53 to permit an audit or evaluation necessary to meet the requirements of a Centers for Medicare & Medicaid Services (CMS)-regulated accountable care organization (CMS-regulated ACO) or similar CMS-regulated organization (including a CMS-regulated Qualified Entity (QE)), under certain conditions.

The other sections in 42 CFR part 2 that are not referenced above are not

addressed in this final rule nor were they discussed in the NPRM because SAMHSA is maintaining their content substantively unchanged from the 1987 final rule.

C. Summary of Impacts

In the first year that the final rule is in effect, we estimate that the total costs associated with updates to 42 CFR part 2 will be roughly \$70,691,000. In year two we estimate that costs will be \$17,680,000, and increase annually as a larger share of entities implement List of Disclosures requirements and respond to disclosure requests. Over the 10-year period of 2016–2025, the total undiscounted cost of the part 2 changes will be about \$241 million in 2016 dollars. When future costs are discounted at 3 percent or 7 percent per year, the total costs become approximately \$217,586,000 or \$193,098,000, respectively. These costs are presented in the tables below.

Costs associated with the 42 CFR part 2 final rule, include: updates to health IT system costs, costs for staff training and updates to training curricula, costs to update patient consent forms, costs associated with providing patients a list of entities to which their information has been disclosed pursuant to a general designation on the consent form (*i.e.*, the List of Disclosures requirement), and implementation costs associated with the List of Disclosures requirements. We assumed that costs associated with modifications to existing health IT systems, staff training costs associated with updating staff training materials, and costs to update consent forms will be one-time costs the first year the final rule is in effect and will not carry forward into future years. Staff training costs other than those associated with updating training materials are assumed to be ongoing annual costs to part 2 programs, also beginning in the first year that the final rule is in effect. The List of Disclosures costs are assumed to be ongoing annual costs to entities named on a consent form that disclose patient identifying information to their participants under the general designation. Costs associated with the List of Disclosures provision are limited to implementation costs for entities that chose to upgrade their health IT systems in order to comply with the List of Disclosures requirements. Several provisions in the final rule reference other lawful holders of patient identifying information in combination with part 2 programs. These other lawful holders must comply with part 2 requirements with respect to information they maintain that is covered by part 2 regulations. However,

because this group is not clearly defined with respect to the range of organizations it may include, we are unable to include estimates regarding the number and type of these organizations and are only including part 2 programs in this analysis.

The benefits of modernizing the part 2 regulations is to increase opportunities for individuals with substance use disorders to participate in new and emerging health and health care models and health information technology (IT). The final rule will facilitate the sharing of information within the health care system to support new models of integrated health care which, among other things, improve patient safety while maintaining or strengthening privacy protections for individuals seeking treatment for substance use disorders. Moreover, as patients are allowed, in certain circumstances, to include a general designation in the "To Whom" section of the consent form, we anticipate there will be more individuals with substance use disorders participating in organizations that facilitate the exchange of health information (*e.g.*, health information exchanges (HIEs)) and organizations that coordinate care (*e.g.*, ACOs and coordinated care organizations (CCOs)), leading to increased efficiency and quality in the provision of health care for this population. In addition, the revisions to the research provision (§ 2.52) will allow additional scientific research to be conducted that will facilitate continual quality improvement of part 2 programs and the important services they offer.

II. Background

A. Significant Technology Changes

Since the promulgation of 42 CFR part 2, significant technology changes have impacted the delivery of health care. The Office of the National Coordinator for Health Information Technology (ONC) was established as an office within HHS under Executive Order 13335 on April 27, 2004. Subsequently, on February 17, 2009, the Health Information Technology for Economic and Clinical Health Act (HITECH Act) of the American Recovery and Reinvestment Act of 2009 (ARRA) (Pub. L. 111–5) expanded the Department's health IT work, including the expansion of ONC's authority and the provision of federal funds for ONC's activities consistent with the development of a nationwide health IT infrastructure. This work included the certification of health IT; the authorization of CMS' Electronic Health Record (EHR) Incentive Program, including payments

to eligible providers for the adoption and meaningful use of certified EHR technology; and numerous other federal agencies' programs—all of which served the objective of ensuring patient health information is secure, private, accurate, and available where and when needed. SAMHSA's role in encouraging the use of health IT by behavioral health (substance use disorder and mental health) providers, included: (1) Collaborating with ONC to develop two sets of Frequently Asked Questions (FAQs) and convening a number of stakeholder meetings to provide guidance on the application of 42 CFR part 2 to HIE models; (2) a one-year pilot project with five state HIEs to support the exchange of health information among behavioral health and physical health providers; and (3) the Data Segmentation for Privacy (DS4P) initiative within ONC's Standards and Interoperability (S&I) Framework facilitated:

- The development of standards to improve the interoperability of EHRs containing sensitive information that must be protected to a greater degree than other health information due to 42 CFR part 2 and similar state laws,
 - six DS4P Implementation Guide (IG) use case pilot projects including the Department of Veterans Affairs (VA)/SAMHSA Pilot that implemented all the DS4P use cases and passed all conformance tests, and
 - the development of the application branded Consent2Share, an open-source health IT solution based on DS4P which assists in consent management and data segmentation. Consent2Share is currently being used by the Prince Georges County (Maryland) Health Department to manage patient consent directives while sharing substance use disorder information with an HIE.
- Despite SAMHSA's efforts, some stakeholders continued to request modernization of 42 CFR part 2 out of concern that part 2, as written in the current (1987) regulation, continues to be a barrier to the integration of substance use disorder treatment and physical health care. As noted below, SAMHSA plans to release shortly an updated version of Consent2Share with improved functionality and ability to meet List of Disclosures requirements.

B. Statutory and Rulemaking History

The Confidentiality of Alcohol and Drug Abuse Patient Records regulations, 42 CFR part 2, implement Section 543 of the Public Health Service Act, 42 U.S.C. 290dd–2, as amended by Section 131 of the Alcohol, Drug Abuse and Mental Health Administration Reorganization Act (ADAMHA

Reorganization Act), Public Law 102–321 (July 10, 1992). The regulations were promulgated as a final rule on July 1, 1975 (40 FR 27802). In 1980, the Department invited public comment on 15 substantive issues arising out of its experience interpreting and implementing the regulations (45 FR 53). More than 450 public responses to that invitation were received and taken into consideration in the preparation of a 1983 NPRM (48 FR 38758). Approximately 150 comments were received in response to the NPRM and were taken into consideration in the preparation of the final rule released on June 9, 1987 (52 FR 21798).

The Department published an NPRM again in the **Federal Register** (FR) on August 18, 1994 (59 FR 42561), which proposed a clarification of the definition of "Program" in the regulations. Specifically, the Department proposed to clarify that, as to general medical care facilities, these regulations cover only specialized individuals or units in such facilities that hold themselves out as providing and provide alcohol or drug abuse (now referred to as substance use disorder) diagnosis, treatment, or referral for treatment and which are federally assisted, directly or indirectly. On May 5, 1995, the final rule was released (60 FR 22296).

SAMHSA posted a document in the FR on May 12, 2014, (79 FR 26929) announcing a public Listening Session planned for June 11, 2014, to solicit feedback on the Confidentiality of Alcohol and Drug Abuse Patient Records regulations, 42 CFR part 2. SAMHSA accepted written comments until June 25, 2014. The Listening Session comments are posted on the SAMHSA Web site at <http://www.samhsa.gov/about-us/who-we-are/laws-regulations/public-comments-confidentiality-regulations>.

Prompted by the need to update and modernize the Confidentiality of Alcohol and Drug Abuse Patient Records regulations at 42 CFR part 2, on February 9, 2016, SAMHSA published an NPRM that proposed revisions to the part 2 regulations and requested public input on the proposed changes during a 60-day public comment period (81 FR 6988). Although raised in the Listening Session public comments, SAMHSA decided not to address issues pertaining to e-prescribing and Prescription Drug Monitoring Programs (PDMPs) in the NPRM because they were not ripe for rulemaking at the time due to the state of technology and because the majority of part 2 programs are not prescribing controlled substances electronically. As noted in the NPRM, SAMHSA intends to monitor developments in this area to

see whether further action may be warranted in the future. SAMHSA received 376 public comment submissions on the part 2 NPRM. The comments received were detailed, thoughtful, and reflective of the complex issues addressed and balanced in the part 2 regulations. This final rule reflects SAMHSA's thorough consideration of all substantive issues raised in the public comments in response to its proposals in the NPRM.

III. Overview of the Final Rule

In this final rule, the Department finalizes the modifications to the Confidentiality of Alcohol and Drug Abuse Patient Records, 42 CFR part 2, including renaming it "Confidentiality of Substance Use Disorder Patient Records." The modifications modernize the rule by facilitating electronic exchange of substance use disorder information for treatment and other legitimate health care purposes while ensuring appropriate confidentiality protections for records that might identify an individual, directly or indirectly, as having or having had a substance use disorder.

Overview of Public Comments

We received 376 public comments from medical health care providers; behavioral health care providers; combined medical/behavioral health care providers; HIEs, ACOs, CCOs, and certified patient-centered medical homes (CPCMHs), sometimes called health homes; third-party payers; privacy/consumer advocates; medical health care provider associations; behavioral health care provider associations; accrediting organizations; researchers; individuals (with no stated affiliation); attorneys (with no stated affiliation); HIT vendors; and state/local governments. The comments ranged from general support or opposition to the proposed provisions to very specific questions or comments regarding the proposed rules.

Some comments were outside the scope of or inconsistent with SAMHSA's legal authority regarding the confidentiality of substance use disorder patient records. Likewise, other comments did not pertain to specific proposals made by SAMHSA in the NPRM. In some instances, commenters raised policy or operational issues that are best addressed through subregulatory guidance that SAMHSA will consider issuing subsequent to this final rule. Consequently, SAMHSA did not address these comments in this final rule.

Commenters have also provided SAMHSA with informative feedback on

how lawful holders, including third-party payers and others within the healthcare industry, use health data or hire others to use health data on their behalf to provide operational services such as independent auditing, legal services, claims processing, plan pricing and other functions that are key to the day-to-day operation of entities subject to this rule. We have previously clarified in responses to particular questions that contracted agents of individuals and/or entities may be treated as the individual/entity. Questions raised by commenters during this rulemaking have, however, highlighted varying interpretations of the current (1987) rule's restrictions on lawful holders and their contractors' and subcontractors' use and disclosure of part 2-covered data for purposes of carrying out payment, health care operations, and other health care related activities. In consideration of this feedback and given the critical role that third-party payers, other lawful holders, and their contractors and subcontractors play in the provision of health care services, SAMHSA is issuing a supplemental notice of proposed rulemaking (SNPRM) to seek further comments and information on this matter.

IV. Effective Date

In this final rule, SAMHSA has established a single effective date of 30 days after the publication of the final rule, or February 17, 2017. On this date, the revised 42 CFR part 2 will replace the 1987 version of part 2 in the CFR and all part 2 programs and other lawful holders of patient identifying information must comply with all aspects of the regulations. In the NPRM, SAMHSA proposed that, with the exception of § 2.13(d), part 2 programs and other lawful holders of patient identifying information would have to comply with applicable requirements of the revised part 2 regulations beginning 30 days after the publication of the final rule. See Section V.D.3 below for a discussion of "other lawful holders." We proposed that entities would not have to comply with the List of Disclosures requirements of § 2.13(d) until two-years after the effective date of the final rule. As explained below, because the right to obtain, upon request, a List of Disclosures is only available to patients who use a general designation in the "To Whom" section of the consent form, entities must only have the technical capability to provide the List of Disclosures if they take advantage of the general designation provision. Therefore, SAMHSA has revised the effective date from that

proposed to avoid confusion. However, signed consent forms in place prior to the effective date of this final rule will be valid until they expire. Nonetheless, part 2 programs may update signed consent forms consistent with the final rule, prior to the effective date of the final rule if they so choose. Consents obtained after the effective date will need to comply with the final rule, regardless of whether the consents involve patient identifying information obtained prior to or after the effective date of this final rule.

Public Comments

One commenter urged that the final rule allow for implementation of the research provision (§ 2.52) immediately or shortly after the rule takes effect. Several commenters raised concerns about how to interpret the two-year delayed implementation of List of Disclosures and whether the general designation will be used during that period.

SAMHSA Response

SAMHSA acknowledges commenters' confusion regarding the proposed two-year delayed compliance date for the List of Disclosures requirements. After considering the public comments received on this point, SAMHSA realized that such a two-year delayed compliance date for the requirements of § 2.13(d) is not helpful. As explained in the "To Whom" section of the part 2-compliant consent requirements (see Section V.J.2 below), an entity that serves as an intermediary (e.g., HIE, ACO, CCO) must comply with the List of Disclosures provision in order to disclose information pursuant to a general designation provided on the consent form (see § 2.31(a)(4)(iii)(B)(3)(i)). Therefore, an entity that serves as an intermediary would be prohibited from electing to disclose information pursuant to a general designation without the ability to comply with the List of Disclosures requirement. It would not make sense to implement a two-year delayed compliance date for the List of Disclosures requirements at § 2.13(d) because the only reason an entity that serves as an intermediary would have to comply with the List of Disclosures requirements would be if they wanted to disclose information pursuant to general designations that have been included in the "To Whom" section of the patient consent form, which requires alerting patients to the fact that they have a right to request a list of entities to which their information has been disclosed (per § 2.13(d)). Thus, an entity that serves as an intermediary is prohibited from

disclosing information pursuant to a general designation without having the capability to comply with the List of Disclosures requirements. For these reasons, it is not advisable to include a two-year delayed compliance date for the List of Disclosures provision. Some entities that serve as intermediaries as described by § 2.31(a)(4)(iii)(B) may elect never to disclose information pursuant to a general designation and, thus, would not need to comply with the List of Disclosures requirement. Those that choose to disclose information pursuant to general designations must ensure the capability to comply with the List of Disclosures requirements at § 2.13(d) before they disclose the information pursuant to a general designation. But there is no timeframe in which they need to comply; only the condition that if they choose to have the option of disclosing information pursuant to a general designation on a consent form, they must also be capable of providing a List of Disclosures upon request per § 2.13(d).

Regarding the suggestion to allow for implementation of the Research provision § 2.52 immediately after the final rule takes effect, SAMHSA declines to make this change. For clarity regarding part 2 compliance, the 1987 part 2 final rule remains in effect until the effective date for the 2016 part 2 regulations established in this final rule. Because of the revised definitions that impact the research provision, it would create unnecessary confusion to make effective § 2.52 before the rest of the final rule.

V. Discussion of Public Comments and Final Modifications to 42 CFR Part 2

In this section of the final rule, SAMHSA explains the finalized revisions to the part 2 regulations and responds to public comments received. If a part 2 CFR section is not addressed below, it is because SAMHSA did not propose changes to that part 2 provision and that this final rule maintains the existing language in that section. However, SAMHSA notes that in addition to the revisions discussed below, SAMHSA has made other technical, non-substantive, and nomenclature changes to various part 2 provisions. Those changes are reflected in the regulatory text at the end of this rule.

A. General Comments on the Proposed Rule

1. General Feedback on the Proposed Rule

a. General Support for the Proposed Rule

Public Comments

Many commenters expressed general support for the proposed rule, with some noting that the proposed rule would preserve the confidentiality rights of substance use disorder patients while facilitating the sharing of health information; would ensure that patients with a substance use disorder participate in, and benefit from, new integrated health care models without fear of putting themselves at risk of adverse consequences; would help reduce the stigma associated with substance use disorder; and would provide patients comfort in knowing they have control of their record.

Several commenters expressed general support for the NPRM's proposed part 2 changes to enhance integrated care and information exchange. Multiple commenters, with some stressing the need for patient privacy protections, suggested that integrated networks of care between medical and behavioral health services is current best practice and will benefit patients. Two commenters implied general support. The first of these two commenters stated that the current practice of keeping paper substance use records separate from the EHR system increases work required to maintain records, creates redundancies, and could contribute to providers missing critical information needed for treating patients. The second commenter stated that the current (1987) part 2 regulations are out of step with the health care system's rapid adoption of EHRs, its capacity to quickly exchange information (e.g., HIEs), the federal privacy and security regulations (Health Insurance and Portability and Accountability Act [HIPAA] and HITECH) governing these EHRs and exchanges, and the increasing treatment of patients' substance use in health care systems not covered by existing part 2 regulations, but by HIPAA.

Another commenter expressed support for the facilitation of electronic exchange of substance use disorder treatment information where the confidentiality protections historically afforded patients by part 2 are maintained.

A few commenters stated that the proposal would help patients with substance use disorders benefit from emerging care models that require

enhanced health information exchange for better care coordination (e.g., CPCMHS, ACOs).

SAMHSA Response

SAMHSA appreciates the support for updating the regulations. This final rule is intended to modernize the part 2 regulations by facilitating the electronic exchange of substance use disorder information for treatment and other legitimate health care purposes while ensuring appropriate confidentiality protections for records that might identify an individual, directly or indirectly, as having or having had a substance use disorder. Many new integrated care models rely on interoperable health IT and these proposed changes are expected to support the integration of substance use disorder treatment into primary and other specialty care, improving the patient experience, clinical outcomes, and patient safety while at the same time ensuring patient choice, confidentiality, and privacy. Due to its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA.

b. General Opposition to the Proposed Rule

Public Comments

Some commenters expressed general opposition to the proposed rule, with some arguing that it would eliminate the right of patients to protect and control personal health information; would introduce complexity, not simplification; and would maintain the stigma surrounding drug use. One commenter warned the proposed rule would create concessions to institutional stakeholders, both providers and researchers, who find the consent requirements inconvenient and burdensome.

Many commenters requested that part 2 remain unchanged, with some stating that loosening part 2 regulations would dissuade substance use disorder patients from seeking help out of fear of how their information could be used against them or that the proposed regulations would not offer the intended protection.

Some commenters asserted that maintaining a separate set of confidentiality restrictions aimed solely at substance use disorder providers and patients perpetuates the discrimination associated with substance use disorder and ultimately negatively impacts patients and the care they receive, suggesting that issues of substance use disorder information confidentiality

should be part of the broader general medical care confidentiality regulations. Others argued that the fear of discrimination is a real problem for many individuals suffering from a substance use disorder and being able to receive treatment without worrying that personal information will be leaked is crucial in helping these people get the help they need so that they can return to their communities as contributing members of society.

SAMHSA Response

SAMHSA wants to ensure that patients with substance use disorders have the ability to participate in, and benefit from, new and emerging health care models that promote integrated care and patient safety while respecting the legitimate privacy concerns of patients seeking treatment for a substance use disorder due to the potential for discrimination, harm to their reputations and relationships, and serious civil and criminal consequences. This approach is consistent with the intent of the governing statute (42 U.S.C. 290dd–2) and regulations at 42 CFR part 2, which is to protect the confidentiality of substance use disorder patient records. SAMHSA has added more flexibility to some of the consent provisions, including a range of “To Whom” consent options that includes the current (1987) “To Whom” consent requirement, but still retained core part 2 protections, including the prohibition on re-disclosure as well as requiring the “Amount and Kind” section of the consent form to include how much and what kind of information is to be disclosed, including an explicit description of the substance use disorder information that may be disclosed. Changes to the research provision also enable patients to benefit from advanced research protocols while still complying with part 2 protections regarding patient confidentiality. However, with these conflicting comments, as well as all other comments, SAMHSA was guided by the governing statute in developing the final rule, which restricts disclosure without consent other than under a small number of exceptions

2. The Proposed Rule Did Not Go Far Enough To Facilitate Information Exchange

Public Comments

Several commenters suggested that the proposed part 2 revisions did not go far enough to facilitate information exchange and data sharing. For example, some commenters asserted that the proposed regulations would

maintain previous barriers and create additional barriers that impede the sharing of information exchange and care coordination necessary to effectively treat patients who seek care in a variety of settings. A few commenters said the proposed part 2 revisions go beyond the protections intended by the statutory requirements in 42 U.S.C. 290dd–2 and suggested that the proposed changes would continue to decrease access to substance use disorder treatment and the achievement of positive health outcomes.

Citing concerns about people with substance use disorders who visit multiple health care providers to obtain medication, one commenter advocated that substance use disorder health care records should be accessible to all health care facilities for the sole purpose of better treating and rehabilitating these patients.

Other commenters requested further clarification on the regulations to ensure that coordination of care happens smoothly for all patients, especially those at the highest need of coordination, without unnecessary barriers. Citing a 2010 report from the President’s Council of Advisors on Science and Technology, a couple of commenters urged SAMHSA to initiate a broad conversation among other HHS agencies to develop a granular data specification standard that enables patients to be in full control of all their health data, not just part 2 data.

Citing technological barriers, a commenter asserted that additional changes to part 2 are necessary to allow for technological solutions for sharing data. One commenter said new funding for HIEs permitted by recent CMS guidance could be maximized by more substantial revisions to part 2 that would encourage the inclusion of substance use disorder providers in HIEs. Expressing uncertainty as to whether data segmentation can be implemented effectively absent clear standards, a commenter expressed concern the result would be a two-tier system of how substance use disorder data are defined both by payers and by local and state jurisdictions that has the effect of having substance use disorder data exchanged differently depending on if the patient received services within or beyond the veil of part 2 regulation.

Some commenters suggested that the current (1987) part 2 regulation and the proposed revisions maintain a status quo of segregated substance use disorder information with minimal benefits to patients, high compliance costs, and deterrence for organizations to provide substance use treatment. Some of these

commenters said the part 2 regulations keep the substance use disorder treatment system isolated from general health care providers and reduce access to substance use disorder treatment being added by general health care organizations, which, due to administrative burden and liability fears, are less likely to add substance use disorder treatment. A few of these commenters asserted that the part 2 regulations have unintended consequences, including disadvantaging persons with a substance use disorder and treatment providers because of the burdens associated with constantly updating expiring consents. One of these commenters said that the burdens caused by the part 2 regulations are particularly costly because patients with substance use disorder are among the highest cost utilizers in the health care system.

Some commenters asserted that maintaining a separate set of confidentiality restrictions aimed solely at substance use disorder providers and patients perpetuates the stigma associated with substance use disorder and ultimately negatively impacts patients and the care they receive, suggesting that issues of substance use disorder information confidentiality should be part of the broader general medical care confidentiality regulations.

Some commenters expressed concern that the proposed part 2 revisions did not address information exchange issues associated with specific types of health care services delivery, including integrated delivery systems operating with a behavioral health organization unit or department; organizations that include affiliated entities, such as jointly held and operated hospital-based systems and health insurance plans; risk-based Medicaid managed care; social service programs integrated with publicly financed health delivery systems; and combined behavioral health service delivery.

One commenter urged SAMHSA to include the release of previous substance use disorder treatment information from insurance companies to part 2 programs as disclosure permitted without consent under part 2. Another commenter expressed concern that SAMHSA did not propose an allowance under part 2 regarding appropriate disclosures by a health plan for the coordination of a health plan member’s care.

Expressing concern that the proposed part 2 revisions do not address many of the issues on which SAMHSA has issued guidance with respect to health information networks, a commenter asserted that such guidance is outdated

and creates unintended obstacles to the desired exchange of information on patients with substance use disorders.

SAMHSA Response

The governing statute (42 U.S.C. 290dd-2) and regulations at 42 CFR part 2 protect the confidentiality of substance use disorder patient records. Consistent with the governing statute, SAMHSA wants to ensure that patients with substance use disorders have the ability to participate in, and benefit from new and emerging health care models which promote integrated care and patient safety while respecting the legitimate privacy concerns of patients seeking treatment for a substance use disorder due to the potential for discrimination, harm to their reputations and relationships, and serious civil and criminal consequences. Toward that end, SAMHSA held a Listening Session on June 11, 2014, to solicit feedback on the Confidentiality of Alcohol and Drug Abuse Patient Records regulations. All the feedback received from the Listening Session was considered and helped to inform the development of the proposed and final rules. In addition, SAMHSA collaborated with its federal partner experts in developing this final rule.

Information exchange is addressed in both the applicability provision (§ 2.12) and the consent requirements provision (§ 2.31), among other places in this final rule. SAMHSA has added more flexibility to the "To Whom" section of the consent form, which will give patients the option to release their records to past, current, and/or future treating providers. In addition, § 2.13 requires a part 2-compliant consent form must list the date, event, or condition upon which the consent will expire, if not revoked before. Thus, it is not sufficient under part 2 for a consent form to merely state that that disclosures will be permitted until the consent is revoked by the patient. It is, however, permissible for a consent form to specify the event or condition that will result in revocation, such as having its expiration date be "upon my death." The Applicability provision includes: "The restrictions on disclosure in these regulations do not apply to communications of information between or among personnel having a need for the information in connection with their duties that arise out of the provision of diagnosis, treatment, or referral for treatment of patients with substance use disorders if the communications are within a part 2 program; or between a part 2 program and an entity that has direct administrative control over the program."

With this rulemaking, SAMHSA has attempted to facilitate the electronic exchange of substance use disorder treatment records while ensuring patient privacy. SAMHSA acknowledges that many EHRs and HIEs are experiencing technical barriers to segmenting or redacting substance use disorder treatment data. As a result, SAMHSA has spent several years supporting the continued development of the Consent2Share application, an open-source health IT solution based on DS4P, which assists in both consent management and data segmentation. It is designed to integrate with existing EHR and HIE systems via the developed standards. Consent2Share enables electronic implementation of various sensitive health information disclosure policies by applying the information-sharing rules needed to constrain the disclosure of sensitive data according to patient preferences. SAMHSA, in conjunction with ONC and other federal partners, also continues to support the development of data standards and IGs to further reduce technical barriers in the field.

Finally, SAMHSA has added additional information from previously issued FAQ guidance to the preamble discussion in this final rule, such as information about medical emergencies and "holds itself out," and plans to issue additional subregulatory guidance after publication of the final rule.

3. Final Rule Should Balance Patient Protections With Enhanced Information Exchange

Public Comments

Numerous commenters emphasized that the part 2 revisions must balance patient protections with enhanced information exchange and data sharing.

Some commenters suggested that patient confidentiality should not be compromised by any updates to the part 2 regulations, reasoning that the stigma associated with having or having had a substance use disorder and the fear that this information may be used against an individual would lead them to not seek treatment. To this end, a few of these commenters cautioned SAMHSA to remain diligent in the oversight of these regulations to ensure that the information is only being conveyed to the appropriate parties with the sole intent to improve patient care. Other commenters emphasized that sharing patient information should be solely for necessary medical purposes. Another commenter argued that the interest in integrating mental health care with physical health care should not result in the erosion or elimination of the heightened privacy protections that are

essential for effective mental health treatment.

A few commenters urged SAMHSA to ensure that the final rule respects patient choice for privacy in the treatment of sensitive information like substance use disorder treatment records, including the right to control how their records are disclosed, even for health and payment purposes. A commenter said the proposed part 2 changes have substantially weakened the privacy protections surrounding the sharing of a patient's substance use treatment data. One commenter stated that before an individual's health data can be accessed, there should be a specific, legitimate reason, and a careful review of the patient's set of permissions. In addition to suggesting that mental health and substance abuse records be blocked from view by any providers or staff not directly involved in the care and treatment of a patient, a commenter asserted that a patient has the right to have substance abuse and/or mental health treatment records blocked from view by even their primary care provider or nurses.

A couple of commenters asserted that it is both necessary and technologically possible to integrate substance use disorder and other health care information and effectively exchange substance use treatment data while maintaining the core protections of part 2, including consent requirements and the prohibition on re-disclosure.

Emphasizing the importance of patient confidentiality and privacy, a few commenters asserted that sacrificing the dignity and well-being of a person seeking help for a substance use disorder in the name of convenience, administrative efficiency, and research is a poor way to achieve the well-being of either the person in need or the community. One of these commenters recommended that SAMHSA delay the part 2 changes until the technology is available to protect persons with substance use disorder.

Another commenter encouraged a cautious, step-wise approach to making substance use treatment records more integrated with general medical records. This commenter expressed concern that making treatment records more accessible to other providers would exacerbate the stigmatization of substance use disorder, particularly among pregnant women, which could lead to these individuals not seeking treatment for their substance use disorder or prenatal care.

SAMHSA Response

SAMHSA reiterates its intent to ensure that patients with substance use

disorders have the ability to participate in, and benefit from new and emerging health care models which promote integrated care and patient safety while respecting the legitimate privacy concerns of patients seeking treatment for a substance use disorder due to the potential for discrimination, harm to their reputations and relationships, and serious civil and criminal consequences. This approach is consistent with the intent of the governing statute (42 U.S.C. 290dd-2) and regulations at 42 CFR part 2, which is to protect the confidentiality of substance use disorder patient records.

In response to the commenters who cautioned SAMHSA to remain diligent in the oversight of these regulations, SAMHSA has the statutory authority to promulgate 42 CFR part 2, but the Department of Justice retains the authority for enforcing 42 CFR part 2. Reports of violation of these regulations may be directed to the United States Attorney for the judicial district in which the violation occurs. The report of any violations of these regulations by an opioid treatment program may be directed to United States Attorney for the judicial district in which the violation occurs as well as the SAMHSA office for opioid treatment program oversight. SAMHSA has oversight of opioid treatment programs through 42 CFR part 8. Related to oversight and compliance education, SAMHSA expects to issue FAQs as it has done in the past and develop other subregulatory guidance such as education and outreach materials.

SAMHSA has added more flexibility to some of the consent provisions but still retained core part 2 protections, including prohibition on re-disclosure as well as consent options that would continue to give patients significant control. For example, the "To Whom" section of the consent form includes an option permitting a general designation under certain circumstances. However, SAMHSA retained the option of listing the name(s) of the individual(s) to whom a disclosure is made. In addition, any disclosure made under these regulations must comply with the "Amount and Kind" of information to be disclosed and the purpose of the disclosure, as provided on a part 2-compliant consent form. Furthermore, § 2.13(a) limits the information to be disclosed to that information which is necessary to carry out the purpose of the disclosure. Moreover, a patient has the option to withhold consent to disclosure of any of their substance use disorder information.

SAMHSA is aware that technology adoption is an ongoing process and that

many behavioral health providers have yet to adopt electronic health records as incentive payments have been unavailable for such purposes for these providers under the HITECH Meaningful Use Program. In addition, paper records are still used today in some part 2 programs and shared through facsimile (FAX). Therefore, in spite of advances in technology, some stakeholders are concerned that part 2, as currently written, continues to be a barrier to the integration of substance use disorder treatment and physical health care. Rather than waiting for the development and adoption of technology, SAMHSA decided to issue these final regulations to ensure that patients with substance use disorders have the ability to participate in, and benefit from new and emerging health care models which promote integrated care and patient safety while respecting the legitimate privacy concerns of patients seeking treatment for a substance use disorder due to the potential for discrimination, harm to their reputations and relationships, and serious civil and criminal consequences. SAMHSA understands the importance of not compromising patient protection, and has, in § 2.13(d) of these final regulations, required an entity that serves as an intermediary (upon request) to provide a List of Disclosures made pursuant to the general designation option. Further, as discussed later in this preamble, the general designation option may not be used until there is technical capability to provide the required List of Disclosures.

4. Part 2 Should Align With the Health Insurance Portability and Accountability Act

Public Comments

Many commenters expressed that part 2 should be aligned with HIPAA. Some commenters specifically mentioned various areas for HIPAA alignment, including the consent form; Business Associate Agreement standards; treatment, payment, and health care operations; patient-requested restrictions on disclosure; de-identification standards, medical emergencies; research; the definition of "Patient identifying information;" HIPAA penalties contained in the HITECH Act; and re-disclosure provisions. Many commenters asserted that aligning the regulations with HIPAA would help to strike an appropriate balance between protecting sensitive patient health information while providing coordinated, quality care. Many commenters urged SAMHSA to align part 2 with HIPAA to broaden

the allowable sharing of data for purposes of care coordination and patient safety.

Numerous commenters urged that substance use disorder records and treatments should be held to the same level of privacy as all other health records. Other commenters raised the concern of equal access, stating that individuals with substance use disorder should have the same access to the benefits of increased care coordination as individuals without substance use disorder.

Commenters encouraged the broader harmonization of part 2, HIPAA, and HITECH into a single uniform set of standards applicable for all personal health information, including substance use disorder treatment and payment.

Some commenters asserted that HIPAA is sufficient to protect patient privacy and part 2 is no longer necessary. Some commenters also asserted that part 2 also predates the development of EHR and HIEs, and there is pressing need to reconsider these rules in light of more recent technological and legal developments. Some commenters expressed concern that complying with both part 2 and HIPAA would lead to undue administrative burden and management issues across the continuum of patient care.

A commenter recommended that SAMHSA should add the same release requirements for substance use disorder treatment as is required for psychotherapy notes under HIPAA, which are restricted from release without the client's consent. According to the commenter, this would give substance use disorder patients protections with Business Associates Agreements (instead of additional rules and forms for Qualified Service Organization Agreements [QSOAs]), notification upon breach requirements, and other rights already afforded persons receiving medical and mental health care.

Several commenters said part 2 should be as consistent as possible with HIPAA, except for the prohibition on use for investigation, prosecution, or criminal charges.

SAMHSA Response

SAMHSA noted the many comments from a wide range of commenters that requested that SAMHSA align part 2 provisions with HIPAA where possible. In some instances, SAMHSA has attempted to do so in this final rule to the extent the change was permissible under 42 U.S.C. 290dd-2. At the same time, part 2 and its governing statute are separate and distinct from HIPAA and

its implementing regulations. Because of its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA.

In response to comments about alignment of this regulation with HIPAA, SAMHSA has aligned the interpretation the definition of “Patient identifying information” with HIPAA to the extent feasible. In addition, SAMHSA revised Security for records (§ 2.16) to more closely align with HIPAA.

B. Statutory Authority (§ 2.1)

SAMHSA is adopting this section as proposed. SAMHSA has combined what was §§ 2.1 (Statutory authority for confidentiality of drug abuse patient records) and 2.2 (Statutory authority for confidentiality of alcohol abuse patient records) and renamed the new § 2.1, Statutory authority for confidentiality of substance use disorder patient records. We have re-designated §§ 2.2 through 2.5 accordingly. In the new § 2.1, SAMHSA has deleted references to 42 U.S.C. 290ee–3 and 42 U.S.C. 290dd–3. Sections 290dd–3 and 290ee–3 were omitted by Public Law 102–321 and combined and renamed into Section 290dd–2, Confidentiality of records. In addition, we have deleted references to laws and regulations that have been repealed in § 2.21.

Public Comments

One commenter urged SAMHSA to assess whether existing statutory authority is adequate to modernize part 2 regulatory requirements to keep pace with existing laws and industry developments while also protecting privacy, and to discuss necessary statutory changes in the final rule. Further, the commenter recommended that SAMHSA encourage Congress to convene public hearings to evaluate proposals for statutory changes and delay issuing a final rule if pending legislative proposals are enacted that change the legal landscape for substance use disorder information and related protections.

A commenter urged SAMHSA to address the congressional action that may be needed to effectively expand the ability to provide coordinated services, such as including health and human services agencies’ field staff clearly into the definition of treatment terms. A few commenters suggested that the statutory authority underlying the part 2 regulations (42 U.S.C. 290dd–2) should be revised. Another commenter asserted that the 1992 confidentiality statute should be reformed to afford patients greater protections against unlawful

disclosure of their substance use disorder treatment, limit the use of information shared for non-health purposes, provide meaningful enforcement and penalties, and more effectively prevent discrimination. Another commenter recommended that modifications should be made to HIPAA to incorporate special protections and limitations for substance use information and that the part 2 regulations should be rescinded. If the intent of the part 2 changes is to prevent inappropriate adverse consequences from the disclosure of substance use disorder health data, a commenter suggested that those specific adverse consequences should be targeted with legislation reform, rather than providing a blanket privacy allowance that hides medical information from providers.

SAMHSA Response

SAMHSA does not have the authority to repeal or revise the governing statute for the regulations codified at 42 CFR part 2 nor any other statute, as that power is given to Congress. The part 2 authorizing statute, 42 U.S.C. 290dd–2, gives the Secretary broad authority to carry out the confidentiality provisions therein, but to promulgate requirements to: (1) Carry out the purposes of the legislation; (2) prevent its circumvention or evasion; and (3) facilitate its compliance. These part 2 revisions were drafted to further these three purposes while, to the extent allowable under the legislation, permitting disclosure and use to increase access to treatment and improve treatment services. The intent of the part 2 regulations and its governing statute (42 U.S.C. 290dd–2) is to protect the confidentiality of substance use disorder patient records. Because individuals seeking treatment for substance use disorders may experience a host of negative consequences, including discrimination, harm to their reputations and relationships, and possibly serious civil and criminal consequences should information regarding their treatment be improperly disclosed, there is a specific need for strong privacy protections for substance use disorder records.

C. Reports of Violations (§ 2.4)

SAMHSA is adopting this section as proposed. We have revised the requirement of reporting violations of these regulations by a methadone program to the FDA (§ 2.5(b)). The authority over methadone programs (now referred to as opioid treatment programs) was transferred from the FDA to SAMHSA in 2001 (66 FR 4076). Suspected violations of 42 CFR part 2 by

opioid treatment programs may be reported to the U.S. Attorney’s Office for the judicial district in which the violation occurred, as well as the SAMHSA office responsible for opioid treatment program oversight.

Public Comments

SAMHSA received no public comments on this section. This section of the final rule is adopted as proposed.

D. Definitions (§ 2.11)

SAMHSA has consolidated all of the definitions in 42 CFR part 2, with the exception the definition of the term “Federally assisted,” into a single section at § 2.11. SAMHSA has retained the definition of the term “Federally assisted” in § 2.12 (Applicability) for the purpose of clarity because it is key to understanding the applicability of the part 2 regulations. SAMHSA is adopting these structural changes as proposed in the NPRM. Specific definitions are discussed in the sections below. If a part 2 definition is not addressed below, it is because SAMHSA did not propose or make substantive changes to that definition. However, as discussed below, SAMHSA updated the terms in those definitions, as appropriate (e.g., to replace “program” with “part 2 program,” and when “alcohol abuse” and “drug abuse” were used collectively to replace it with “substance use disorder”). The definitions in the regulatory text of this final rule reflect these changes.

1. New Definitions

a. Part 2 Program

SAMHSA is adopting this definition as proposed. SAMHSA defines a “Part 2 program” as “a federally assisted program (federally assisted as defined in § 2.12(b) and program as defined in § 2.11). See § 2.12(e)(1) for examples.” We have retained the examples provided in § 2.12(e)(1) of the current (1987) regulations, with minor clarifications in § 2.12(e)(1), because they explain the part 2 applicability and coverage. SAMHSA has replaced the term “program” with “part 2 program,” where appropriate. For example, we have revised the definition of QSO, including replacing “program” with “part 2 program,” which is discussed in depth below (see Section V.D.2.i., Existing Definitions). We also replaced “program” with “part 2 program” in several other definitions, while making no additional changes.

While a couple of commenters purported to address the proposed definition of “Part 2 program,” the nature of their comments made clear that their underlying concern was how

SAMHSA defined “Program” for purposes of part 2. For this reason, these comments are addressed in the discussion of the definition of “Program” below (see Section V.D.2.h).

b. Part 2 Program Director

SAMHSA is adopting this definition as proposed, except for a non-substantive technical edit. Because of the addition of the “Part 2 program” definition, we have defined a “Part 2 program director” as:

- In the case of a part 2 program that is an individual, that individual; and
- In the case of a part 2 program that is an entity, the individual designated as director or managing director, or individual otherwise vested with authority to act as chief executive officer of the part 2 program.

We have deleted the definition of “Program Director.”

Public Comments

SAMHSA received no public comments on this definition. This section of the final rule is adopted as proposed.

c. Substance Use Disorder

SAMHSA is adopting this definition as proposed, except to remove the final sentence, “Also referred to as substance abuse.” Throughout this rule, SAMHSA made revisions to refer to alcohol abuse and drug abuse collectively as “substance use disorder” but, when referring to the part 2 governing statute, we use “substance abuse” since that is the term used in 42 U.S.C. 290dd–2. SAMHSA also uses the term “substance abuse” when discussing public comments and other publications that use that term. For consistency, SAMHSA also revised the title of 42 CFR part 2 from “Confidentiality of Alcohol and Drug Abuse Patient Records” to “Confidentiality of Substance Use Disorder Patient Records.” SAMHSA has replaced “alcohol or drug abuse” with “substance use disorder” in several definitions.

While SAMHSA has deleted the definitions of “Alcohol abuse” and “Drug abuse,” we continued to use the terms “alcohol abuse” and “drug abuse” when referring to 42 U.S.C. 290dd–3 and 42 U.S.C. 290ee–3 (omitted by Pub. L. 102–321 and combined and renamed into Section 290dd–2), respectively, because they are the terms used in the statutes.

SAMHSA is defining the term “Substance use disorder” in such a manner as to cover substance use disorders that can be associated with altered mental status that has the

potential to lead to risky and/or socially prohibited behaviors, including, but not limited to, substances such as, alcohol, cannabis, hallucinogens, inhalants, opioids, sedatives, hypnotics, anxiolytics, and stimulants. In addition, the “Substance use disorder” definition clarifies that, for the purposes of these regulations, the term excludes both tobacco and caffeine.

Public Comments

Several commenters expressed support for the newly defined term “substance use disorder” to replace references to alcohol and drug abuse. One commenter requested that SAMHSA clarify the scope of substance use disorder and what constitutes substance use treatment. Another commenter suggested that, in the definition of substance use disorder, protected data should be directly related to an objective measure, such as information related to specific payment or clinical diagnosis codes submitted in connection with reimbursement for services.

SAMHSA Response

The final rule adopts the definition of substance use disorder as proposed, except that the parenthetical of the proposed definition is not adopted in the final rule. Use of the term is consistent with recognized classification manuals, current diagnostic lexicon, and commonly used descriptive terminology. Moreover, SAMHSA declines to define substance use disorder treatment by specific billing or diagnostic codes in the final rule as these codes are subject to frequent revision.

d. Treating Provider Relationship

SAMHSA is modifying the proposed definition of “Treating provider relationship” slightly to account for the situation of involuntary commitment and other situations where a patient is diagnosed, evaluated and/or treated, but may not have actually consented to such care, as discussed in greater detail below. In summary, a treating provider relationship means that, regardless of whether there has been an actual in-person encounter:

- A patient is, agrees to, or is legally required to be diagnosed, evaluated, and/or treated, or agrees to accept consultation, for any condition by an individual or entity; and
- The individual or entity undertakes or agrees to undertake diagnosis, evaluation, and/or treatment of the patient, or consultation with the patient, for any condition.

As explained in the NPRM, the term “agrees” as used in the definition does not necessarily imply a formal written agreement. An agreement might be evidenced, among other things, by making an appointment or by a telephone consultation.

It is also important to note that, based on the definition of treating provider relationship, SAMHSA considers an entity to have a treating provider relationship with a patient if the entity employs or privileges one or more individuals who have a treating provider relationship with the patient.

Public Comments

A few commenters expressed support for the proposed definition of “treating provider relationship.” One commenter supported the definition and added that this type of relationship could be a result of any action taken to schedule, refer, or order services that are related to health services to be provided in the future.

Other commenters provided suggestions to improve the definition, including specifying entities involved in identifying, evaluating, and referring for treatment any persons in need of substance use disorder services; adding related services, including social services, and consultation; accounting for patients who cannot agree or consent to the relationship; and clarifying that an individual’s designated treating provider is also a treating provider for part 2 purposes, even before the patient’s first appointment. A few commenters requested that HIEs, health plans, and organizations that provide care coordination be added to the definition, or that comparable definitions be provided for these entities.

A few commenters objected to the consent requirements limiting recipients to entities with a “treating provider relationship,” and suggested that the requirement be eliminated, or the term be redefined to include entities that provide care management. A few commenters also disagreed with the interpretation that equates making an appointment with an agreement to diagnose or treat.

Some commenters raised a number of questions about the definition, including whether the definition applies to each hospital in a system or to the system as a whole; whether the definition applies to Medicaid managed care programs with mandatory enrollment; whether a care coordination entity can form a treating provider relationship with an individual; and whether ancillary providers, such as laboratories, pharmacies, therapists,

counselors, or mental health specialists, fall within the definition of treating provider relationship.

SAMHSA Response

A treating provider relationship, as defined in this final rule, begins when an individual seeks or receives health-related assistance from an individual or entity who may provide assistance. However, the relationship is clearly established when the individual or entity agrees to undertake diagnosis, evaluation, and/or treatment of the patient, or consultation with the patient, and the patient agrees to be treated, whether or not there has been an actual in-person encounter between the individual or entity and the patient. When a patient is not regarded as being legally competent under the laws of their jurisdiction, such as when a patient is subject to an involuntary commitment (*i.e.*, formally committed for behavioral health treatment by a court, board, commission, or other legal authority), a treating provider relationship may be established when a patient is, agrees to, or is legally required to be provided consultation, diagnosis, evaluation, and/or treatment by an individual or entity. A treating provider relationship may be established whether or not there has been an actual in-person encounter between the individual or entity and patient. A treating provider relationship with a patient may be established by any member of the health care team as long as the relationship meets the definition of "Treating provider relationship." SAMHSA believes that further specification in this definition is unnecessary.

e. Withdrawal Management

SAMHSA is adopting this definition as proposed. SAMHSA has removed the definition of "Detoxification treatment" and replaced it with the definition of the currently acceptable term "Withdrawal management" as indicated in the American Society of Addiction Medicine (ASAM) Principles of Addiction Medicine, 5th edition.¹

Public Comments

One commenter supported replacing the term "Detoxification treatment" with the term "Withdrawal management."

SAMHSA Response

SAMHSA appreciates this support.

2. Existing Definitions

a. Central Registry

SAMHSA is adopting this definition as proposed. SAMHSA has updated the definition of "Central registry" to incorporate currently accepted terminology.

Public Comments

One commenter stated that the NPRM preamble described the proposed revisions to the definition of "central registry" as changes to "update terminology to make the definition clearer," rather than detailing the proposed changes to the definition, so there was insufficient information for public comment.

SAMHSA Response

Exact language for the definition of "central registry" was provided in the NPRM regulation text and is being adopted as proposed.

b. Disclose or Disclosure

SAMHSA is modifying the proposed definition of "Disclose" to specifically cover diagnosis, treatment, and referral for treatment for substance use disorder, as follows: "*Disclose* means to communicate any information identifying a patient as being or having been diagnosed with a substance use disorder, having or having had a substance use disorder, or being or having been referred for treatment of a substance use disorder either directly, by reference to publicly available information, or through verification of such identification by another person." We have updated terminology and made the definition clearer. SAMHSA has defined only one word, "Disclose," since it is implied that the same definition applies to other forms of the word.

Public Comments

A commenter encouraged SAMHSA to develop guidance and promote standards adoption for the identification of part 2 data so that the implementation and applicability of concrete restrictions and obligations can be applied to the disclosure of such data. Another commenter urged coordination between the definitions of "disclosure" of a substance use disorder and a current or former "patient," because someone may have a past substance use disorder but may not have been a former patient. A commenter stated that the NPRM preamble described the proposed revisions to the definition of "disclosure" as changes to "update terminology and make the definition clearer," rather than detailing

the proposed changes to the definition, so there was insufficient information for public comment. SAMHSA Response

With regard to developing subregulatory guidance and promoting standards adoption, SAMHSA is an organizational member of Health Level 7 (HL7) and is working to ensure that health IT standards support the needs of behavioral health treatment patients and providers. SAMHSA has supported the creation of several HL7 standards, including the Composite Privacy Consent Directive Domain Analysis Model to capture the requirement of states and federal agencies. Those requirements were reflected in the IG for Clinical Document Architecture Release 2 (CDA R2) to provide a standard-based electronic representation of a consent to support the management of consent directives and policies.

In response to comments urging coordination between the definition of "disclosure" and a current or former patient, SAMHSA has expanded the definition of "disclose" to include any information identifying a patient as "being or having been diagnosed with a substance use disorder, having or having had a substance use disorder, or being or having been referred for treatment of a substance use disorder." Exact language for the definition of "disclosure" was provided in the NPRM regulatory text and is being adopted as proposed. We note that to the extent an individual may have had a past substance use disorder diagnosis, but never sought or received diagnosis, treatment, or referral for substance use disorder treatment, the definition of patient would not cover such individual and the part 2 regulations would not apply to that individual's health information unless and until the individual is a patient as defined in these regulations.

c. Maintenance Treatment

SAMHSA is modifying this definition from what was proposed by replacing the term "pharmacotherapy" with the phrase "long-term pharmacotherapy" for purposes of clarity to read as follows: "*Maintenance treatment* means long-term pharmacotherapy for individuals with substance use disorders that reduces the pathological pursuit of reward and/or relief and supports remission of substance use disorder-related symptoms." As compared to the 1987 final rule definition of "Maintenance treatment," SAMHSA updated terminology in the definition and moved it from § 2.34 to § 2.11.

¹ ASAM Principles of Addiction Medicine, 5th edition, 2014, Richard Ries et al., editor. <http://www.asam.org/quality-practice/essential-textbooks/principles-of-addiction-medicine> (last accessed Aug. 1, 2016).

Public Comments

A commenter stated that the NPRM preamble described the proposed revisions to the definition of “maintenance treatment” as changes to “update terminology and make the definition clearer,” rather than detailing the proposed changes to the definition, so there was insufficient information for public comment.

SAMHSA Response

Exact language for the proposed definition of “maintenance treatment” was provided in the NPRM regulation text at 81 FR 7014.

d. Member Program

In response to comments received, SAMHSA has revised the definition of “Member program,” by replacing a reference to a specific geographic distance, so it reads as follows: “*Member program* means a withdrawal management or maintenance treatment program which reports patient identifying information to a central registry and which is in the same state as that central registry or is in a state that participates in data sharing with the central registry of the program in question.”

Public Comments

A commenter asserted that the 125-mile distance to a state border limitation contained within the definition of “member program” does not adequately recognize the geographic realities of states with significant rural and frontier areas, and the commenter strongly suggested that it be eliminated.

SAMHSA Response

In response to the comment, SAMHSA has removed the distance from the definition to address the concerns about rural areas and replaced it with “is in a state that participates in data sharing with the central registry of the program in question.” We removed the distance requirement from the definition of “Member program” to reflect that in some states (*e.g.*, with rural areas) the distance from the border of the state in which the central registry is located may exceed 125 miles.

e. Patient

SAMHSA is adopting this definition as proposed. To emphasize that the term “Patient” refers to both current and former patients, SAMHSA has revised the definition as follows: “*Patient* means any individual who has applied for or been given diagnosis, treatment, or referral for treatment for a substance use disorder at a part 2 program. *Patient* includes any individual who, after

arrest on a criminal charge, is identified as an individual with a substance use disorder in order to determine that individual’s eligibility to participate in a part 2 program. This definition includes both current and former patients.”

Public Comments

One comment opposed the inclusion of former patients in the definition because retrospective outcome studies would be difficult to conduct because many patients relocate or their contact information becomes otherwise unobtainable for purposes of obtaining consent to disclose and use patient identifying information. One commenter opposed including in the definition individuals who “applied for” but did not receive a diagnosis and also asked who makes the identification of an individual with a substance use disorder. Another commenter suggested that the definition should include individuals participating in prevention programs and recovery support programs. A commenter asked whether the definition includes an individual who has been involuntarily committed to a program for treatment and suggested that the final rule clarify that such an individual is considered a patient and entitled to part 2’s protections.

SAMHSA Response

Regarding the opposition to including former patients in the definition of “Patient” because retrospective outcome studies would be difficult to conduct, this concern appears to be based on a misunderstanding that a consent requires a specific expiration date. A part 2-compliant consent form must list the date, event, or condition upon which the consent will expire, if not revoked before. Therefore, it would be permissible for a consent form to specify the event or condition that will result in revocation, such as having its expiration date be “upon my death.” Consequently, it is possible for researchers to obtain consents that would permit retrospective outcome studies.

Regarding the inclusion of “applied for” in the definition of “Patient,” this definition has not changed from that included in the 1987 final rule except to replace “alcohol and drug abuse” with “substance use disorder.” SAMHSA declines to make the recommended change since no other concerns regarding the inclusion of “applied for” have been received in over 29 years. Patients who are involuntarily committed to participating in or receiving substance use disorder

services from a part 2 program are covered by the definition. SAMHSA declines to accept the suggestion that the definition should be expanded to cover patients in prevention programs as such programs are not covered by the definition of a part 2 program.

f. Patient Identifying Information

SAMHSA is modifying the definition as proposed to: (1) Clarify that SAMHSA intends for the identifiers listed in the HIPAA Privacy Rule at 45 CFR 164.514(b)(2)(i) that are not already included in the definition of patient identifying information to meet the “or similar information” standard; (2) delete the word “publicly” from the phrase “can be determined with reasonable accuracy either directly or by reference to other publicly available information”; and (3) to revise the last sentence as follows: for internal use only by the part 2 program, if that number does not consist of, or contain numbers (such as a social security, or driver’s license number) that could be used to identify a patient with reasonable accuracy from sources external to the part 2 program.”

SAMHSA intends for the identifiers listed in the HIPAA Privacy Rule at 45 CFR 164.514(b)(2)(i) that are not already included in the definition of “Patient identifying information” to meet the following clause: “or similar information.” Those HIPAA Privacy Rule identifiers are:

- (1) Name;
- (2) All geographic subdivisions smaller than a [s]tate, including street address, city, county, precinct, zip code, and their equivalent geocodes, except for the initial three digits of a zip code if, according to the current publicly available data from the Bureau of the Census:
 - (i) The geographic unit formed by combining all zip codes with the same three initial digits contains more than 20,000 people; and
 - (ii) The initial three digits of a zip code for all such geographic units containing 20,000 or fewer people is changed to 000;
- (3) All elements of dates (except year) for dates directly related to an individual, including birth date, admission date, discharge date, date of death; and all ages over 89 and all elements of dates (including year) indicative of such age, except that such ages and elements may be aggregated into a single category of age 90 or older;
- (4) Telephone numbers;
- (5) Fax numbers;
- (6) Electronic mail addresses;
- (7) Social security numbers;
- (8) Medical record numbers;
- (9) Health plan beneficiary numbers;

- (10) Account numbers;
- (11) Certificate/license numbers;
- (12) Vehicle identifiers and serial numbers, including license plate numbers;
- (13) Device identifiers and serial numbers;
- (14) Web Universal Resource Locators (URLs);
- (15) Internet Protocol (IP) address numbers;
- (16) Biometric identifiers, including finger and voice prints;
- (17) Full face photographic images and any comparable image; or
- (18) Any other unique identifying number, characteristic, or code.

Public Comments

A few commenters urged that the definition of “Patient identifying information” be aligned with the “protected health information,” including the patient identifiers, under HIPAA. One commenter recommended that telephone numbers and email addresses should be mentioned because they are accessible by electronic means. Another commenter suggested that SAMHSA delete the reference to publicly available information; use a phrase such as, “information with respect to which there is a reasonable basis to believe that the information can be used to identify the individual”; and mention other identifiers assigned to an individual, including credit card numbers, driver’s license numbers, and automobile license numbers.

SAMHSA Response

The HIPAA Privacy Rule, at 45 CFR 164.514(b)(2)(i), enumerates 18 identifiers that make health information individually identifiable. SAMHSA considers any of these identifiers to be patient identifying information either because SAMHSA has explicitly listed the identifier in the definition of patient identifying information in 42 CFR part 2 or because SAMHSA considers the identifier to be ‘similar information’ (See § 2.11 Definitions). Also as suggested, SAMHSA has deleted the word “publicly” from the phrase “can be determined with reasonable accuracy either directly or by reference to other publicly available information;”

g. Person

SAMHSA is adopting this definition as proposed. SAMHSA has revised the definition of “Person” to clearly indicate that “Person” is also referred to as individual or entity.

Public Comments

A commenter urged SAMHSA to recognize an “Affiliated Covered Entity”

under HIPAA as an “entity” in the definition of “Person.” Another commenter asked that the definition specify that it includes limited liability companies. A commenter suggested removing the redundant parenthetical at the end of the proposed definition.

SAMHSA Response

SAMHSA has determined that no change is needed in response to the comments; the definition covers any legal entity. SAMHSA declines to delete the clarifying parenthetical at the end of the definition since the terms “individual” and “entity” are more intuitive than the term “person,” as defined in these regulations.

h. Program

SAMHSA decided not to finalize its proposed changes to the definition of “Program,” but did make minor updates to the terminology in the text. We are, however, finalizing certain other minor changes to the proposed definition to update terminology so that it is consistent with current best practice.

First, SAMHSA moved the reference to examples from the definition of “Program” to the definition of “Part 2 program.”

Second, we retain the language changes from drug and/or alcohol abuse to substance use disorder.

Finally, as stated in the NPRM, SAMHSA clarifies that paragraph (1) of the definition of “Program” would not apply to “general medical facilities”. However, paragraphs (2) and (3) of the definition of “Program” would apply to “general medical facilities.”

Public Comments

A few commenters expressed support for the revised definition of “Program.”

However, many commenters generally opposed the proposed revision to the definition of “Program.” The reasons primarily related to interpretations that SAMHSA did not intend to imply. Many commenters asked that SAMHSA not call out general medical practices as a separate category of provider excluded from paragraph one but included in paragraphs two and three of the definition of program.

Some commenters requested clarification in various areas, including the meaning and examples of “holds itself out;” determining “primary function;” treatment of behavioral health clinics and community mental health centers; roles of general medical or dental practices that engage in screening, brief intervention, and referrals for treatment (SBIRT) activities, and co-located substance abuse/mental health counselors; whether covered part

2 facilities provide some, primarily provide, or only provide substance use disorder diagnosis, treatment, and referral to treatment; physicians who prescribe buprenorphine products and pharmacies that fill those prescriptions; a general psychiatric unit that also provides substance use disorder treatment; and offering patients integrated behavioral health care in a primary care setting.

Some commenters suggested limiting programs to those that meet a minimum standard, are specifically licensed, credentialed, or accredited, such as state licensure. Several commenters asked that SAMHSA provide an exception for pharmacists and pharmacies or dentists. Lastly, a commenter said the rule should include rehabilitation centers as medical facilities.

SAMHSA Response

Based on the number and type of comments received regarding including general medical practices in the Program definition, SAMHSA has decided not to finalize the general medical practices language in the final rule. The number and type of comments led SAMHSA to believe separating out general medical practices from general medical facilities was more confusing than clarifying. Most commenters indicated a belief that SAMHSA was expanding the definition of program to include individuals and entities that had not previously been covered. As we’ve previously noted in our publicly available FAQ guidance, a practice comprised of primary care providers could be considered a “general medical facility and be subject to 42 CFR part 2 if they are both “federally assisted” and meet the definition of a program under 42 CFR 2.11. Nevertheless, consistent with the definition of a “program”:

1. If a provider is *not* a general medical care facility, then the provider meets the part 2 definition of a “Program” if it is an individual or entity who holds itself out as providing, *and* provides substance use disorder diagnosis, treatment, or referral for treatment.

2. If the provider is an identified unit within a general medical facility, it is a “Program” if it holds itself out as providing, *and* provides, substance use disorder diagnosis, treatment, or referral for treatment.

3. If the provider consists of medical personnel or other staff in a general medical facility, it is a “Program” if its primary function is the provision of substance use disorder diagnosis, treatment, or referral for treatment *and* is identified as such specialized medical personnel or other staff by the general medical facility.

SAMHSA’s FAQ guidance further addresses the issue of what constitutes a general medical facility. This FAQ

guidance clarifies that, while the term “general medical care facility” is not defined in the definitions section of 42 CFR 2.11, hospitals, trauma centers, or federally qualified health centers would generally be considered “general medical care” facilities. Therefore, primary care providers who work in such facilities would only meet part 2’s definition of a program if (1) they work in an identified unit within such general medical facility that holds itself out as providing, and provides, substance use disorder diagnosis, treatment or referral for treatment, or (2) the primary function of the provider is substance use disorder diagnosis, treatment or referral for treatment and they are identified as providers of such services. In addition, a practice comprised of primary care providers could be considered a “general medical facility.” As such, only an identified unit within that general medical care facility which holds itself out as providing *and* provides substance use disorder diagnosis, treatment or referral for treatment would be considered a “program” under the definition in the part 2 regulations. Medical personnel or staff within that facility whose primary function is the provision of those services and who are identified as such providers would also qualify as a “program” under the definition in the part 2 regulations. Other units or practitioners within that general medical care facility would not meet the definition of a part 2 program unless such units or practitioners also hold themselves out as providing and provide substance use disorder diagnosis, treatment or referral for treatment.

SAMHSA also clarifies that the program definition does not categorically exclude buprenorphine providers. However, holding a waiver to prescribe buprenorphine or holding a waiver and prescribing buprenorphine as part of primary care practice also does not lead to categorical inclusion of providers in the definition of a part 2 program; such determinations are fact-specific. Also, a health care provider that does not otherwise meet the definition of a part 2 program would not become a program simply because they provided screening, brief intervention, and/or referral to treatment within the context of general health care. SBIRT is discussed in further detail under Section V.E (Applicability) below.

Regarding comments on the meaning of “primary function,” SAMHSA did not propose a definition of “primary function” because it has not historically received many, if any, questions on its meaning.

Consistent with previously published FAQ guidance, we reiterate that “Holds itself out” means any activity that would lead one to reasonably conclude that the individual or entity provides substance use disorder diagnosis, treatment, or referral for treatment, including but not limited to:

- Authorization by the state or federal government (e.g. licensed, certified, registered) to provide, and provides, such services,
- Advertisements, notices, or statements relative to such services, or
- Consultation activities relative to such services.

i. Qualified Service Organization

SAMHSA is adopting the definition of “Qualified Service Organization” as proposed. SAMHSA has revised the definition of QSO to include population health management in the list of examples of services a QSO may provide. SAMHSA also revised the term “medical services” as listed in the examples of permissible services offered by a QSO to clarify that it is limited to “medical staffing services.” SAMHSA made this revision to emphasize that QSOs should not be used to avoid obtaining patient consent.

Public Comments

A large number of commenters supported the proposed QSO definition, particularly the addition of “population health management.” Many commenters requested a clarification or a narrow definition of “population health management.”

SAMHSA Response

SAMHSA provided guidance in the NPRM preamble regarding what constitutes population health management services. Specifically, population health management refers to increasing desired health outcomes and conditions through monitoring and identifying individual patients within a group. To achieve the best outcomes, providers must supply proactive, preventive, and chronic care to all of their patients, both during and between encounters with the health care system. For patients with substance use disorders, who often have comorbid conditions, proactive, preventive, and chronic care is important to achieving desired outcomes. Any QSO executed between a part 2 program and an organization providing population health management services would be limited to the office(s) or unit(s) responsible for population health management in the organization (e.g., the ACO, CCO, CPCMH, or managed care organization [MCO]), not the entire

organization and not its participants (e.g., case managers, physicians, addiction counselors, hospitals, and clinics). However, the presence of a QSO does not preclude disclosures of patient identifying information to other individuals within these organizations based on a valid part 2-compliant consent.

Public Comments

Some commenters requested clarification about the definition, such as whether an HIE could be considered a QSO; whether the definition, which includes “an individual,” can include members of the covered entity’s workforce; and whether public health management staff can share part 2 information with case managers.

A few commenters expressed opposition to the proposed definition of QSO, asserting that patient consent should be obtained before making a disclosure of substance use disorder information to multiple entities. Another commenter warned that under the definition, it would be difficult to track which part 2 patients may or may not be within a population health program at any given time.

SAMHSA Response

The NPRM as well as the current (1987) definition of QSO uses the term person. Person is defined in the current (1987) regulations as: “*Person* means an individual, partnership, corporation, federal, state or local government agency, or any other legal entity.” The NPRM definition proposed a parenthetical: “(also referred to as individual or entity).” Because both the 1987 regulations and the NPRM definition of person includes both individuals and entities, the definition of the term QSO has always included both individual and entities, the definition of the term QSO has always included individuals, as well as entities.

Whether the QSO definition applies to members of an entity’s workforce and case managers depends on whether they meet the definition of QSO as defined in § 2.11 because such determinations are fact-specific. An individual or entity who does not meet the definition of a QSO may, however, meet the definition of “Treating provider relationship” for the purposes of obtaining consent. Likewise, care coordination was not added to the list of examples of permissible services offered by a QSO because care coordination has a patient treatment component.

Under the part 2 governing statute, patient records pertaining to the patient’s substance use disorder may be shared only with the prior written

consent of the patient or as permitted under the part 2 statute, regulations, or guidance. However, the regulations may contain such definitions, and may provide for such safeguards and procedures, including procedures and criteria for the issuance and scope of orders, as in the judgment of the Secretary are necessary or proper to effectuate the purposes of this statute, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

Regarding the concern about disclosing to multiple entities under a QSOA, as noted above, any QSOA executed between a part 2 program and an organization providing population health management services would be limited to the office(s) or unit(s)/entity(ies) responsible for population health management for the organization (e.g., the ACO, CCO, CPCMH, or MCO), not the entire organization and not its participants (e.g., case managers, physicians, addiction counselors, hospitals, and clinics).

Public Comments

Commenters provided various suggestions to improve the definition. Several commenters said the definition should be expanded to permit a multi-party agreement for multi-directional sharing of information. Commenters said the description of the provision should address overlapping requirements of HIPAA and part 2 with respect to contractual agreements and services such as data processing and billing. A commenter said facilitating entities should be able to enter into QSO agreements with participating providers to perform quality improvement activities. Another commenter said the QSO exception to restrictions on disclosure should apply to third-party payers and other holders of part 2 information, and the definition should include other functions to support improved care delivery.

SAMHSA Response

Part 2 and its implementing statute are much more restrictive than HIPAA. Because 42 CFR part 2 and its governing statute are separate and distinct from HIPAA, the part 2 regulations use different terminology than used in HIPAA. However, SAMHSA aligned policy with HIPAA where possible.

Because a QSOA is a two-way agreement between a part 2 program and the entity providing the part 2 program and an individual or entity providing a service to a part 2 program, agreements between more than those two parties (e.g. multi-party agreements) are prohibited. A QSOA cannot be used to

avoid obtaining patient consent in the treatment context.

As stated previously in this preamble, SAMHSA is issuing an SNPRM to seek further comments and information on the disclosure to and use of part 2 information by the contractors and subcontractors of third-party payers and other lawful holders for purposes of payment, health care operations, and other health care related activities before establishing any appropriate restrictions on disclosures to them.

Public Comments

Commenters generally expressed opposition to the change of “medical services” to “medical staffing services” in the definition. A commenter expressed opposition to the interpretation that the QSO agreement executed between a part 2 program and an organization that provided population health management services would be limited to a specific office(s) or unit(s) within the organization that is/are tasked with carrying out such services.

SAMHSA Response

SAMHSA has revised the term “medical services” as listed in the examples of permissible services offered by a QSO to clarify that it is limited to “medical staffing services.” SAMHSA proposed to make this revision to emphasize that QSOAs should not be used to avoid obtaining patient consent. Accordingly, a QSOA could be used by a part 2 program to contract with a provider of on-call coverage services (previously clarified in FAQ guidance) or other medical staffing services but could not be used to disclose John Doe’s patient identifying information to his primary care doctor for the purpose of treatment (other than that provided under a QSOA for medical staffing services). However, an individual or entity who is prohibited from providing treatment to an individual patient under a QSOA may still meet the requirements of having a treating provider relationship (as that term is defined in § 2.11) with respect to the consent requirements in § 2.31.

With respect to the comment regarding an organization providing population health management services, a QSOA is a two-way agreement between a part 2 program and the entity providing the service. We reiterate that disclosures by a QSO pursuant to a QSOA executed between a part 2 program and an organization that provides population health management services would be limited to a specific office(s) or unit(s)/entity(ies) that is/are tasked with carrying out such services

for the organization. SAMHSA believes this is a needed safeguard to limit disclosures to that which is reasonably necessary to carry out services under the QSOA.

Public Comments

Many commenters expressed opposition to the exclusion of “care coordination” from the QSO definition or requested clarification for the meaning of “care coordination.” Some commenters specifically requested adding care coordination to the list of services a QSO may provide, reasoning that it would facilitate integrated substance use disorder, health, and mental health services. The commenters asserted that the addition would benefit patients’ health, safety, and quality of life while maintaining confidentiality protections.

SAMHSA Response

In the NPRM, SAMHSA clarified that an individual or entity is prohibited from providing treatment to an individual patient under a QSOA. SAMHSA has revised the term “medical services” as listed in the examples of permissible services offered by a QSO to clarify that it is limited to “medical staffing services.” SAMHSA proposed to make this revision to emphasize that QSOAs should not be used to avoid obtaining patient consent. Accordingly, a QSOA could be used by a part 2 program to contract with a provider of on-call coverage services (previously clarified in FAQ guidance) or other medical staffing services, but could not be used to disclose John Doe’s patient identifying information to his primary care doctor for the purpose of treatment (other than that provided under a QSOA for medical staffing services). For this reason, care coordination and medication management, both of which have a treatment component, were not added to the list of examples of permissible services offered by a QSO. However, an individual or entity who is prohibited from providing treatment to an individual patient under a QSOA may still meet the requirements of having a treating provider relationship (as that term is defined in § 2.11) with respect to the consent requirements in § 2.31.

Regarding the request to clarify the meaning of “care coordination” and how it differs from “population health management,” because SAMHSA decided not to include care coordination in the examples of permissible services under the definition of a QSO, we did not define the term “care coordination” in the NPRM and, therefore, decline to do so

in this final rule. Population health management refers to increasing desired health outcomes and conditions through monitoring and identifying patients within a group.

j. Records

SAMHSA has revised the proposed definition. As suggested by commenters, SAMHSA has modified the definition of “Records” by adding “created by” and a parenthetical with examples to read as follows: “Records means any information, whether recorded or not, created by, received, or acquired by a part 2 program relating to a patient (e.g., diagnosis, treatment and referral for treatment information, billing information, emails, voice mails, and texts). For the purpose of these regulations, records include both paper and electronic records.” SAMHSA revised the definition of “Records” to include any information, whether recorded or not, which includes verbal communications, created, received or acquired by a part 2 program relating to a patient. The revised definition makes clear that, for the purpose of the part 2 regulations, records include both paper and electronic records.

Public Comments

A commenter remarked that the proposed definition of “records” does not address “identifiability,” asserting that information that is not individually identifiable, that is not reasonably capable of being re-identified, or that is aggregate may not need to be covered by the definition of record. Regarding the phrase “whether recorded or not” in the proposed definition, a couple of commenters requested guidance on what constitutes “unrecorded information.”

SAMHSA Response

SAMHSA clarifies that unrecorded information includes verbal communications and is still considered part of the record. To add further clarity to the definition, SAMHSA has revised the definition of “Records” from the proposed language by adding examples (e.g., diagnosis, treatment and referral for treatment information, billing information, emails, voice mails, and texts). SAMHSA also added the phrase “created by” to clarify that “records” includes information received, acquired, or created by a part 2 program relating to a patient. Regarding “identifiability,” identification is addressed in the term “Patient identifying information,” not in the definition of “Record.” The definition of records is just that and does not address information that may be disclosed.

k. Treatment

SAMHSA is adopting the proposed definition of “Treatment.” SAMHSA has deleted the term “management” from the “Treatment” definition.

Public Comments

A few commenters opposed the proposed removal of the term “management” from the definition of “treatment” because the narrower definition would decrease information sharing and have a chilling effect on care coordination. A couple of commenters urged that “treatment” should be limited to care of the substance use disorder and not be extended to include care of other medical conditions secondary to or that arose because of the substance use disorder. One commenter suggested that “care” should be defined as it is used in the definition of “treatment.”

SAMHSA Response

SAMHSA removed the term “management” from the definition of “Treatment” because in today’s health care environment, “management” has a much broader meaning than it did when the regulations were last revised. Treatment is not limited to care of the substance use disorder because patients with a substance use disorder often have comorbid conditions.

3. Terminology Changes

SAMHSA is adopting the changes proposed in this section, as described in the NPRM. In addition to changes to several definitions, SAMHSA is also implementing several terminology changes intended to ensure consistency in the use of terms throughout the regulations and to increase the understandability of the rule. First, we made revisions to consistently refer to law enforcement as “law enforcement agencies or officials.” Secondly, SAMHSA revised the part 2 regulations to use the term “entity” instead of “organization” wherever possible. Thirdly, SAMHSA clarifies that, for the purposes of this regulation, the term “written” includes both paper and electronic documentation. Fourthly, we use the phrase “part 2 program or other lawful holder of patient identifying information” to refer to a part 2 program or other individual or entity that is in lawful possession of patient identifying information. A “lawful holder” of patient identifying information is an individual or entity who has received such information as the result of a part 2-compliant patient consent (with a prohibition on re-disclosure notice) or as a result of one of the exceptions to the consent requirements in the statute

or implementing regulations and, therefore, is bound by 42 CFR part 2.

Public Comments

One commenter requested clarification about what entities are considered “lawful holders” of patient identifying information in the context of complex health care systems. For example, would the parent company of a health care system, each specific hospital, or each entity affiliated with the health care system be considered a “lawful holder”?

Another commenter urged that the term “other lawful holder” should be clearly defined in the final rule.

SAMHSA Response

A “lawful holder” of patient identifying information is an individual or entity who has received such information as the result of a part 2-compliant patient consent (with a prohibition on re-disclosure notice) or as permitted under the part 2 statute, regulations, or guidance and, therefore, is bound by 42 CFR part 2. SAMHSA cannot determine what entities are “lawful holders” because such determinations are fact-specific. In addition, SAMHSA determined that it was not feasible to define all lawful holders of information so has not included a definition in the rule. As explained in the NPRM, examples of “lawful holders” include a patient’s treating provider, a hospital emergency room, an insurance company, an individual or entity performing an audit or evaluation, or an individual or entity conducting scientific research. This list provided in the NPRM was intended only as an illustrative example of who could be a lawful holder.

4. Other Comments on Definitions

Public Comments

Many commenters expressed general support for the proposed clarification of definitions. Some commenters sought new definitions for terms including HIE; recipient; population health management and care coordination; population health; re-disclosure; law enforcement agency or official; repository; and scientific research.

Several commenters addressed the “alternative approach” discussed in the NPRM for allowing disclosure to treating providers by requesting the addition of a definition for “organization” to § 2.11. Commenters generally supported a clear definition of “organization” to allow for the exchange of part 2 information. One commenter, however, opposed relying upon a definition rather than specifying the process for consent in the rule itself.

SAMHSA Response

SAMHSA did not propose definitions for the terms suggested and has decided not to pursue the “alternative approach” since that approach as written received no support and only 2 commenters supported the “alternative approach with suggested revisions.” Based on comments received, the agency has addressed disclosures to treating providers within this rule’s consent requirements.

E. Applicability (§ 2.12)

SAMHSA is adopting this section as proposed. In addition to the revisions to the definition of “Program” and the addition of a definition for “Part 2 program” mentioned above, SAMHSA has revised § 2.12(d)(2)(i)(C) so that restrictions on disclosures also apply to individuals or entities who receive patient records from other lawful holders of patient identifying information (see § 2.11, Terminology Changes). Patient records subject to these regulations include patient records maintained by part 2 programs, as well as those records in the possession of “other lawful holders of patient identifying information.” SAMHSA may issue additional subregulatory guidance addressing the applicability section, as deemed necessary, after publication of the final rule.

Public Comments

A few commenters supported the proposed applicability provisions. Some commenters cited relevant preamble language but remained uncertain about who qualifies as a part 2 provider. Several commenters requested greater clarification in identifying part 2 coverage, including whether the provisions apply to various models of integrated behavioral health and primary care; mixed-use facilities that provide primary care and behavioral health services or mental health and substance use treatment; certified community behavioral health centers that do not necessarily “primarily” furnish substance abuse services but rather provide a comprehensive approach to care; embedded behavioral health information within an acute care record; a medical facility providing several distinct books of business, of which only one receives federal assistance; pharmacies; dentists; Drug Addiction Treatment Act (DATA 2000)-waived physicians; employee assistance programs that may include substance use assessment and counseling; a provider who bills Medicaid and Medicare but is not otherwise a

“federally assisted program;” and confidential information related to safety and incident reporting. A commenter requested clarification about the definition of “direct administrative control” in the proposed provision related to exceptions for communications within a part 2 program. A commenter urged consideration for reporting by programs to a public health registry and suggested advantages of such a requirement.

Some commenters requested applicability exemptions. Some commenters requested exclusions for employee assistance programs; Medicaid overutilization control programs; and plans with integrated care delivery models. Some commenters requested exemptions to consent for communications between a QSO and a part 2 program or third-party payer (*e.g.*, Medicaid) and between a part 2 program. One commenter requested clarification that consent and disclosure requirements would not apply when the patient directs electronic disclosure for a consumer health application. A commenter requested clarification that services are only covered under part 2 if the personnel are identified as providing substance use disorder treatment outside the organization to the general public. Commenters favored an exception for reporting of child abuse and elder abuse. A few commenters mentioned certain concerns related to the proposed rule. A commenter argued that the proposed rule would do little to simplify requirements for providers, and this may result in providers not documenting substance use disorder-related information in medical records. Other commenters opposed the lack of protections in the proposal and warned that the rule would impose constraints and burdens on providing a patient’s behavioral health data and impede information sharing. A commenter stated that general health care organizations that hire an employee with substance use disorder expertise would be considered a covered entity, so they may be discouraged from integrating substance use disorder services into their operation. Similarly, hospital emergency departments may be discouraged from hiring staff with specialized experience in substance use disorders. One commenter expressed concern that the rule may extend protection not just to records for substance use disorder treatment, but also to medical conditions and medications that allow an inference that the patient has a substance use disorder. One commenter argued that any substance use record should be

protected from unauthorized disclosure for criminal justice investigations. Expressing support for the continued protection of substance use disorder records from disclosure and use in criminal investigations except under certain conditions, a commenter said that while HIPAA and other laws also provide similar protections, part 2 has more stringent due process and court order provisions.

One commenter argued that the proposed rule exceeds the underlying statutory requirements in 42 U.S.C. 290dd–2 by expanding protections of substance use information and establishing penalties. Another commenter mentioned that the HITECH revisions to HIPAA already require general medical facilities to utilize enhanced security measures to protect the confidentiality and privacy of patient’s health records.

A few commenters advocated that the safeguards applied to protected health information (as defined under HIPAA) for all other health conditions could apply for substance use disorder-related information.

One commenter urged a focus on the actual information that requires protection, as opposed to the origin of the treatment records. Similarly, another commenter expressed disappointment that SAMHSA rejected the option to redefine the applicability of part 2 based on the type of substance use disorder treatment services, rather than the type of provider.

Several commenters suggested exceptions to the applicability of part 2 regulations. One commenter said SAMHSA should create a due diligence exception to allow a part 2 program’s records to be reviewed in the event of a proposed sale of the part 2 facility. Another commenter said SAMHSA should include an exception to allow disclosure of part 2 records in connection with the seeking of a grant or much needed funding for substance abuse patients. A commenter said SAMHSA should create a payment exception that would allow part 2 programs to submit information to governmental or commercial payers without the patient’s prior authorization.

Other commenters stated that exceptions should be added for the purpose of seeking involuntary commitment of an individual who poses a likelihood of serious harm to self or others by reason of a substance use disorder, in accordance with applicable provisions of state law and subject to appropriate terms regarding the continued confidentiality of such data. Another commenter stated that the rule

should specifically permit continued data collection of substance use disorder by state agencies. Another commenter stated that an exception limited disclosures to law enforcement and other appropriate parties in the event a committed patient escapes from a treatment facility, and to other part 2 programs and appropriate state agencies as necessary for purposes of discharge planning or transferring a patient without consent.

SAMHSA Response

With respect to the comments recommending aligning with HIPAA, SAMHSA has attempted to do so in this final rule to the extent the change was permissible under 42 U.S.C. 290dd-2. At the same time, part 2 and its governing statute are separate and distinct from HIPAA and its implementing regulations. Because of its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA.

As stated in the preamble discussion of the applicability (§ 2.12) in the NPRM, SAMHSA considered options for defining what information is covered by part 2, including defining covered information based on the type of substance use disorder treatment services provided instead of the type of facility providing the services. SAMHSA however, rejected that approach because more substance use disorder treatment services are occurring in general health care and integrated care settings, which typically are not covered under the current (1987) regulations. Providers who in the past offered only general or specialized health care services (other than substance use disorder services) now, on occasion, provide substance use disorder treatment services, but only as incident to the provision of general health.

The definitions of “Part 2 program” and “Program” are critical to applicability. These terms are defined in § 2.11. The response to comments on the definition of program in this final rule further clarifies coverage. Holding a waiver to prescribe buprenorphine or holding a waiver and prescribing buprenorphine as part of primary care practice does not lead to categorical inclusion of providers in the definition of a part 2 program; such determinations are fact-specific. The same concept applies whenever determining applicability.

With respect to comments on part 2 coverage, although the statute may not be explicit with regard to certain provisions in 42 CFR part 2, the statute

directs the Secretary to prescribe regulations to carry out the purpose of the statute, which may include definitions and may provide for such safeguards and procedures that in the judgment of the Secretary are necessary or proper to effectuate the purposes of this section, to prevent circumvention or evasion thereof, or to facilitate compliance therewith. For various models of integrated behavioral health, SAMHSA strives to facilitate information exchange within new health care models while addressing the legitimate privacy concerns of patients seeking treatment for a substance use disorder. These concerns include, but are not limited to, the potential for loss of employment, loss of housing, loss of child custody, discrimination by medical professionals and insurers, arrest, prosecution, and incarceration.

The response to comments on the definition of program in this final rule further clarifies coverage.

SBIRT is a cluster of activities designed to identify people who engage in risky substance use or who might meet the criteria for a formal substance use disorder. Clinical findings indicate that the overwhelming majority of individuals screened in a general medical setting do not have a substance use disorder and do not need substance use disorder treatment. A health care provider that does not otherwise meet the definition of a part 2 program would not become a part 2 program simply because they provide SBIRT within the context of general health care.

For behavioral health facilities, SAMSHA notes that federally qualified health centers, community mental health centers, and behavioral health clinics meeting the definition of a part 2 program must comply with 42 CFR part 2 and those that do not meet the definition of part 2 program do not have to comply with 42 CFR part 2 unless they become a lawful holder of patient identifying information because they received patient identifying information via consent (along with a notice of prohibition on re-disclosure) or as permitted under the part 2 statute, regulations, or guidance. Rather than offer definitions or outline an exhaustive list of entities that could meet the definition of a part 2 program, we prefer to offer illustrative examples in the explanation of applicability provision of these regulations (*see* § 2.12(e)(1)). SAMHSA has not received questions in the past concerning the definition of general medical facility.

Regarding the question of part 2 applicability when a patient directs electronic disclosure for a consumer health application, the NPRM preamble

discussion of lawful holder in the Terminology Changes section stated: “A patient who has obtained a copy of their records or a family member who has received such information *from a patient* would not be considered a ‘lawful holder’ of patient identifying information in this context.”

Information disclosed by a part 2 program or a lawful holder of patient identifying information is covered by 42 CFR part 2 and requires patient consent unless disclosure is otherwise permitted under the part 2 statute or regulations. Therefore, it is permissible for a *patient to disclose* information to a personal health record or similar consumer health application but if a part 2 program or lawful holder of patient identifying information discloses that information to the personal health record or other similar consumer application on behalf of the patient, consent would be required.

Regarding patient records and Medicaid overutilization control programs, the prohibition on re-disclosure (§ 2.32) applies to information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, such as indicated through standard medical codes, descriptive language, or both, and allows other health-related information shared by the part 2 program to be re-disclosed, if not prohibited by any other applicable laws. Under the current statutory authority, patient records pertaining to substance use disorder may be shared only with the prior written consent of the patient or as permitted under the part 2 statute and implementing regulations. In addition, the authorizing statute specifically enumerates the areas of non-applicability, which includes the reporting under state law of incidents of suspected child abuse and neglect to appropriate state and local authorities. Therefore, SAMHSA did not adopt this requested change. Regarding elder abuse, if a program determines it is important to report elder abuse, disabled person abuse, or a threat to someone’s health or safety, or if the laws in a program’s state require such reporting, the program must make the report anonymously, or in a way that does not disclose that the person making the threat is a patient in the program or has a substance use disorder, or obtain a court order if time allows.

Some commenters asked about the applicability of the part 2 regulations to various facilities or entities, such as rehabilitation facilities, dentists, and pharmacies. In summary, if a provider is not a general medical facility or does

not hold itself out as providing, and provides, substance use disorder diagnosis, treatment or referral for treatment, it would not meet the first section of the definition of “Program.” If the provider is either not an identified unit within a general medical facility that holds itself out as providing, or does not provide, substance use disorder diagnosis, treatment, or referral for treatment, it does not meet the second section of the definition of “Program.” If the provider either does not consist of medical personnel or other staff in a general medical facility whose primary function is the provision of substance use disorder diagnosis, treatment, or referral for treatment or is not identified as such specialized medical personnel or other staff by the general medical facility, it does not meet the third section of the definition of “Program.” Whether embedded behavioral health information is covered by 42 CFR part 2 depends on several factors: First, only patient identifying information is subject to part 2 protections. If the acute care facility meets the definition of a part 2 program and the information would identify, directly or indirectly an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, the information is subject to part 2 protections; and if the acute care facility received the patient identifying information via a valid part 2 consent (with a notice of prohibition on re-disclosure) or as otherwise permitted under the part 2 statute or regulations, the information is subject to part 2 protections.

With respect to pharmacies, when they receive prescriptions directly from part 2 programs, the patient identifying information related to those prescriptions is subject to 42 CFR part 2 confidentiality restrictions (as indicated by the accompanying prohibition on re-disclosure notice). Pharmacies that receive paper prescriptions directly from patients (and do not receive a prohibition on re-disclosure notice) are, therefore, not subject to the part 2 confidentiality restrictions. However, if the pharmacy or pharmacist meets the definition of a part 2 program, they must comply with the part 2 regulations.

In response to the commenter’s request for clarification that services are only covered under part 2 if the personnel are identified as providing substance use disorder treatment outside the organization to the general public, the third section of the definition of program uses the term “personnel” to state that medical personnel or other staff in a general

medical facility whose primary function is the provision of substance use disorder diagnosis, treatment or referral for treatment and who are identified as such providers. This section of the definition of program does not include the phrase “holds itself out” as do the first two sections of the definition of program. In the third section of the definition, the medical personnel or other staff must be identified as such specialized medical personnel or other staff by the general medical facility.

Although commenters requested an exclusion for employee assistance programs, the regulation text at § 2.12(d)(1) states: “Coverage includes, but is not limited to, those treatment or rehabilitation programs, employee assistance programs, programs within general hospitals, school-based programs, and private practitioners who hold themselves out as providing, and provide substance use disorder diagnosis, treatment, or referral for treatment.

Commenters requested an exemption for communications between a part 2 program and another entity under common ownership or control, but SAMHSA declines to make the requested change. However, as stated in the regulatory text (§ 2.12(c)(3)) restrictions on disclosure in these regulations do not apply to communications of information between or among personnel having a need for the information in connection with their duties that arise out of the provision of diagnosis, treatment, or referral for treatment of patients with substance use disorders if the communications are:

- (i) Within a part 2 program; or
- (ii) Between a part 2 program and an entity that has direct administrative control over the program.”

SAMHSA declines to add the various suggested exceptions to the applicability of the part 2 regulations, and encourages all stakeholders to consult with legal counsel to ensure compliance with 42 CFR part 2, as well as any other applicable federal, state, or local laws or regulations. SAMHSA is limited by statute to the specific exceptions listed in the law; it cannot, therefore, add exceptions. As stated previously, SAMHSA is authorized to promulgate regulations and to provide such safeguards and procedures necessary to carry out the purposes of the authorizing statute. SAMHSA has endeavored to strike an appropriate balance between the important privacy protections afforded patients with substance use disorders and the necessary exchange of information to improve treatment outcomes for these individuals.

F. Confidentiality Restrictions and Safeguards (§ 2.13)

SAMHSA is modifying this section slightly from that proposed in the NPRM by adding a paragraph clarifying responsibility for the List of Disclosures requirement. As discussed in the proposal, because SAMHSA is revising the consent requirements to allow a general designation in certain circumstances, we have revised § 2.13 by adding a paragraph (d), which requires that, upon request, patients who have included a general designation in the “To Whom” section of their consent form must be provided, by the entity that serves as an intermediary, a list of entities to which their information has been disclosed pursuant to the general designation (List of Disclosures).

The new § 2.13(d) specifies that patient requests for a list of entities to which their information has been disclosed must be in writing. Consistent with the NPRM, we consider “written” to include both paper and electronic documentation. The list is limited to disclosures made within the past 2 years.

Further, entities named on the consent form that disclose information pursuant to a patient’s general designation (entities that serve as intermediaries as described in § 2.31(a)(4)(iii)(B)) must respond to requests for a List of Disclosures in 30 or fewer days of receipt of the request.

1. Delayed Implementation of List of Disclosures Provision

Public Comments

Several commenters raised concerns about how to interpret the two-year delayed implementation of List of Disclosures and whether the general designation will be used during that period. A commenter expressed concern about the immediate implementation of the general designation while the right of patients to obtain a List of Disclosures is postponed for two years.

Other commenters stated that, based on the NPRM language, HIEs will not be able to take advantage of a general designation on the consent form until they have the ability to comply with the List of Disclosures requirement.

Commenters said SAMHSA needs to clarify that the duty to begin collecting and storing disclosures under the general designation begins two years after the effective date of the final rule and not before.

A commenter recommended that the right to obtain a list of those who have received the patient’s information should be implemented simultaneously

with any other revisions to the part 2 regulation. Another commenter said SAMSHA should implement the List of Disclosures requirement within 90 days.

SAMHSA Response

SAMHSA clarifies that the general designation on a consent form may not be used until entities have the ability to comply with the List of Disclosures provision. However, SAMHSA has removed the two-year delayed compliance date for the List of Disclosures provision for the reasons discussed in Section IV above.

2. Responsibilities Under the List of Disclosures Process

Public Comments

Commenters said SAMHSA should allow non-treating entities, that do not have a treating provider relationship with the patient whose information is being disclosed and serve as intermediaries named on the consent form, to release the List of Disclosures to the facility where the patient receives care (or the part 2 program), rather than to the patient directly. One commenter said because this process, in which the patient/consumer requests and receives the List of Disclosures from the site where they receive care/part 2 program, rather than from the HIE, resembles the process currently being used to meet HIPAA disclosure requirements, it could be implemented without requiring additional burdens on HIEs. Since most HIEs are not patient-facing, commenters stated that there are typically not policies or procedures in place for interacting with patients directly, particularly for patient authentication, and suggested it be done at the provider level, and that the patient communication be maintained at the part 2 program level.

Other commenters said SAMHSA does not specify what responsibility, if any, the part 2 program has to coordinate or verify the compliance of the CCO or HIE with the List of disclosures. One commenter said if SAMHSA intends for the part 2 program to have any responsibilities beyond this, then it should obtain additional feedback from part 2 programs before proposing any new obligations. Some commenters appeared to assume the part 2 program was responsible for the List of Disclosures and requested that SAMHSA modify the requirement to impose the duty directly upon the HIE, ACO, CCO, or research institution to provide the listing to the patient, rather than the part 2 program.

A commenter said SAMSHA should clarify what entities must be included

on the List of Disclosures when the entity is part of a complex healthcare system.

Another commenter said the absence of requiring disclosure of individual names undermines the intent of the List of Disclosures and undermines the purpose of expanding the “To Whom” provision and the patient’s incentive or willingness to consent to a general designation. The commenter said the provision must be very explicit in disclosing those agencies or individuals that will receive the patients’ medical information.

SAMHSA Response

Regarding the suggestion to allow entities that serve as intermediaries as described by § 2.31(a)(4)(iii)(B) to release the List of Disclosures to the facility where the patient receives care (or the part 2 program) or with the providers to whom the disclosure was made, rather than directly to the patient, SAMHSA has decided to retain the NPRM language and proposed responsibilities because the party making the disclosure under the general designation should be accountable for that disclosure. SAMHSA has clarified in paragraph § 2.31(d)(3) that the part 2 program is not responsible for complying with the List of Disclosures requirement; the entity that serves as an intermediary, as described in § 2.31(a)(4)(iii)(B), is responsible for compliance with the List of Disclosures requirement.

SAMHSA plans to issue subregulatory guidance that clarifies how the patient may request the List of Disclosures from intermediaries as described by § 2.31(a)(4)(iii)(B).

On the responsibility of part 2 providers to comply with the List of Disclosures requirement, SAMHSA agrees with the commenters that more clarity is needed. In the circumstance in which a patient provides a general designation in the “To Whom” part of a consent form, the part 2 program may not know to whom the disclosures have been made by the entity that serves as an intermediary. As such, the List of Disclosures provision requires that: The entity named on the consent form that discloses information pursuant to a patient’s general designation (the entity that serves as an intermediary, as described in § 2.31(a)(4)(iii)(B)) must: (i) Respond in 30 or fewer days of receipt of the written request; and (ii) Provide, for each disclosure, the name(s) of the entity(ies) to which the disclosure was made, the date of the disclosure, and a brief description of the patient identifying information disclosed. Further, paragraph (d)(3) clarifies that

the part 2 program is not responsible for complying with § 2.13(d).

In response to the request for clarification on what entities must be listed on the List of Disclosures and suggestion that individuals (rather than entities with whom such individuals are affiliated) must be listed, SAMHSA clarifies that the List of Disclosures must include a list of the entities to which the information was disclosed pursuant to a general designation. Individuals who received patient identifying information pursuant to the general designation on a consent form should be included on the List of Disclosures based on an entity affiliation, such as the name of their practice or place of employment. However, if entities that are required to comply with the List of Disclosures requirement wish to include individuals on the List of Disclosures, in addition to the required data elements which are outlined in § 2.13(d)(2)(ii), nothing in this rule prohibits it.

SAMHSA considered requiring both individuals and entities to be included on the List of disclosures but, after reviewing the Health Information Technology Privacy Committee’s (HITPC’s) recommendations (https://www.healthit.gov/sites/faca/files/PSTT_Transmittal010914.pdf), decided to require, at a minimum, a list of entities. These recommendations addressed the HITECH requirement that HIPAA covered entities and business associates account for disclosures for treatment, payment, and health care operations made through an EHR. The Transmittal Letter recommended, “that the content of the disclosure report be required to include only an entity name rather than a specific individual as proposed in the NPRM.” In addition, the Transmittal Letter noted that the Organization for Economic Cooperation and Development (OECD) principles, the Fair Credit Reporting Act, and the Privacy Act of 1974 do not require that the names of individuals be provided. The HITPC, a committee established by the American Recovery and Reinvestment Act of 2009 in accordance with the Federal Advisory Committee Act (FACA), provides recommendations on health IT policy issues to the ONC for consideration. The HITPC gave a broad charge to its Privacy & Security Tiger Team (Tiger Team) “to provide recommendations on how to implement the requirements of the HITECH Act of 2009 for covered entities and business associates to account for disclosures for treatment, payment and health care operations made through an EHR. In the referenced Transmittal Letter, the HITPC did not focus on 42 CFR part 2,

however, given the similarities of the issues and the importance of the lessons the Tiger Team learned, SAMHSA was persuaded by the Tiger Team's discussion.

3. Technological Challenges and Burden of the List of Disclosures Provision

Public Comments

Public Comments

Many commenters argued that entities may not be equipped to maintain and provide a List of Disclosures. A few commenters expressed general concern about the burden associated with the List of Disclosures provision. Several commenters added that the burden is disproportionate to the anticipated benefit. Other commenters specified areas of burden, including administering consents; developing a tracking system; manually reviewing or auditing all records; and transmitting information by U.S. mail. Some comments mentioned the operational impact of the provision, including the impact on existing business practices; uncertainty about interoperability with additional systems; and operationalizing a different approach for HIPAA. One commenter argued that HIPAA already provides sufficient protections through the requirement for tracking and providing an accounting of certain disclosures. Another commenter expressed concern that there are varying levels of technical resources available for compliance with the rule.

A commenter warned that one component of the Affordable Care Act is its focus on sharing of certain medical information and the proposed regulation may prevent realization of that goal. Similarly, another commenter said, if HIEs are included in the disclosure request, entities would be left with the choice of either not sending this information, which would then not be available in emergent situations, or not complying with this requirement. Another commenter said creating additional accounting requirements, without further clarification on the interoperability of such EHR systems, can create a state of continuous uncertainty and flux, deterring investment into substance use disorder treatment programs within integrated care networks.

Some commenters stated that the proposed provision conflicts with existing HIPAA accounting of disclosure requirements or state laws. Other commenters said it would be administratively burdensome to implement, particularly in light of the fact that the health information technology industry is still waiting for

OCR to determine how it will address the HITECH changes to HIPAA accounting of disclosures.

For the above reasons, some commenters urged SAMHSA not to include the List of Disclosures provision in the final rule; delay promulgating until OCR decides how it will approach the HITECH provisions concerning the HIPAA accounting of disclosures requirement; and engage with OCR, providers, and vendors to fully understand the implications of such a requirement before establishing an implementation date for the List of Disclosures requirement.

SAMHSA Response

SAMHSA is including the List of Disclosures requirement in the final rule to balance the flexibility of allowing a general designation in the "To Whom" section of the consent form against the protection of patient privacy. We understand commenter concerns about the technical feasibility of implementing the List of Disclosures requirement. However, there is no timeframe in which part 2 programs and lawful holders need to comply with the List of Disclosures requirements; only the condition that if they choose to have the option to disclose information pursuant to a general designation on the "To Whom" part of the consent form, they must also be capable of providing a List of Disclosures upon request per § 2.13(d). Because the general designation is not mandated on a consent form, this allows entities time to develop and test the technology needed for compliance with the List of Disclosures requirements or to decide not to disclose information pursuant to a general designation and not implement technology needed for compliance with the List of Disclosures provision.

Public Comments

A commenter said the List of Disclosures will impose a complex burden upon all parties involved in the disclosure and receipt of substance use disorder treatment, asserting that the disclosing party—if it is not a part 2 program—would need to know that the information being disclosed is subject to the part 2 requirements. The commenter said there may be a question of whether this type of disclosure would be prohibited per the Prohibition on re-disclosure provision, and this becomes more complex if further disclosures or re-disclosures take place.

SAMHSA Response

SAMHSA responds that the entity that serves as an intermediary should be

provided a copy of the part 2-compliant consent form or the pertinent information on the consent form necessary for the intermediary to comply with the signed consent. The providers with a treating provider relationship with the patient whose information is being disclosed would be aware of the part 2 protections because the disclosure would also be accompanied by the prohibition on re-disclosure notice.

Public Comments

A commenter said SAMHSA has not addressed whether there will be a cost to the patient for obtaining a List of Disclosures. If patients will be required to pay a fee for this list of disclosures, the commenter said SAMHSA should establish a reasonable fee for the provision of the List of Disclosures.

SAMHSA Response

SAMHSA strongly encourages entities to provide the List of Disclosures at no charge to the patient.

4. Recommendations To Further Protect Patient Privacy

Public Comments

A commenter said SAMHSA should require the List of Disclosures to include all disclosures of the patient's health information, whether such disclosure was made pursuant to a consent form, QSOA, medical emergency, or any other means. Similarly, another commenter stated that, when a record of all uses and disclosures already exists, a program should be required to make that record available to a patient upon request. Other commenters asserted that the List of Disclosures should be presented to the patient at the time the consent is signed, rather than after the disclosures have been made. A commenter said patients should also be given the option, at the time of signing, to cross out entities to whom they do not want their information disclosed. Also, a commenter said patients should be informed of changes to the list that may now have access to their information.

Some commenters expressed concern that the List of Disclosures would be limited to disclosures made within the past two years, which does not allow the patient to learn about past data breaches. Some commenters recommended expanding the time period to five years or not including a time limit.

SAMHSA Response

In response to these concerns and recommendations about increasing patient privacy rights, SAMHSA

clarifies that the List of Disclosures provision was proposed in the NPRM as a way to balance the revision to the consent form allowing a more general designation in the “To Whom” section, which is optional. The List of Disclosures provision is limited to information disclosed pursuant to the general designation by the entity that serves as the intermediary, but these entities as well as part 2 programs are not prohibited from providing patients with all available information. Patients will have the right to request this List of Disclosures and have it produced in a timely fashion; however, SAMHSA has chosen not to require entities to provide this information at the time of patient consent as this would be impossible because disclosure of the patient’s information has not occurred at that point. SAMHSA also emphasizes that patients are not required to use a general designation in the “To Whom” section of the consent form. Therefore, patients can limit disclosures by a more concrete specification (*i.e.*, named individual(s)).

In response the comments on expanding the time period that the List of Disclosures covers, this final rule’s provision to limit the List of Disclosures to those made within the last two years does not preclude an entity that serves as an intermediary from providing the patient with a list covering disclosures made for periods greater than two years.

Public Comments

A commenter said SAMHSA should not include the sample language for a request for a List of Disclosures under the general designation in the final rule because HIPAA has shown that entities construe such sample language as mandates to use the sample language, thereby making it more difficult for an individual to request such information, and hindering their ability to obtain such information contrary to the intent of the proposed rule. The commenter suggested that SAMHSA, as part of this rule or in subregulatory guidance at a later date, recommend that certain criteria be included as part of an individual’s request for such disclosures.

SAMHSA Response

SAMHSA did not intend for the sample language for a request for a list of disclosures provided in the NPRM to be construed as a requirement for requesting a List of Disclosures, but rather to assist patients in making such a request. SAMHSA is retaining the sample language in this rule.

Public Comments

A commenter asserted that states can set a higher standard than part 2, but the NPRM language would lead the patient to think that they could get information via unencrypted email. The commenter suggested the provision be modified to indicate that responses sent to the patient electronically may be sent by unencrypted email at the request of the patient “so long as it is not prohibited by applicable law.” In addition, the commenter said the final rule should require patients to be notified that there may be some level of risk that the information in an unencrypted email could be read by a third party. In addition, the commenter said the rule should state that, if patients are notified of the risks and still prefer unencrypted email, the patient has the right to receive the information in that way, and entities are not responsible for unauthorized access of the information while in transmission to the patient based on the patient’s request.

SAMHSA Response

The language regarding unencrypted email transmissions appears in the NPRM preamble only and acknowledges both encrypted and unencrypted email as acceptable modes of transmission. The language goes on to say: “Responses sent to the patient electronically may be sent by encrypted transmission (*e.g.*, encrypted email or portal), or by unencrypted email at the request of the patient, so long as the patient has been informed of the potential risks associated with unsecured transmission. Patients should be notified that there may be some level of risk that the information in an unencrypted email could be read by a third party. If patients are notified of the risks and still prefer unencrypted email, the patient has the right to receive the information in that way, and entities are not responsible for unauthorized access of the information while in transmission to the patient based on the patient’s request. Before using an unsecured method to respond to a request for a list of disclosures, an entity should take certain precautions, such as checking an email address for accuracy before sending it or sending an email alert to the patient for address confirmation to avoid unintended disclosures.” SAMHSA does not intend to be prescriptive regarding how the information is relayed to the patient or to preempt applicable state law that may prohibit unencrypted transmission (see § 2.20).

Public Comments

A commenter said the NPRM abandoned the current statement that the rule does not restrict a disclosure that “an identified individual is not and has never been a patient.” The commenters said the new approach militates against fishing by third parties.

SAMHSA Response

SAMHSA agrees with the commenter that prohibiting a disclosure that “an identified individual is not and has never been a patient” mitigates against fishing by third parties. In the NPRM, SAMHSA proposed to remove the concept from § 2.13(c)(2) that the regulations do not restrict a disclosure that an identified individual is not and never has been a patient and has retained this position in the final rule.

Public Comments

Commenters made other recommendations relating to the proposed List of Disclosures requirement focused on generally improving patients’ rights, including suggestions to keep information confidential; notify when a treating provider has accessed the patient’s confidential information; ensure patient-approved information sharing; provide a process by which an individual can raise a complaint; and disclose to patients in plain language.

SAMHSA Response

SAMHSA acknowledges and shares the commenters’ concerns with patient privacy. We believe that the List of Disclosures requirement as proposed in the NPRM is adequate to inform patients of how their information has been shared in the event that they provided a general designation in the “To Whom” portion of their consent. SAMHSA encourages entities to provide the information associated with a List of Disclosures in plain language and with sufficient specificity so that patients understand the List of Disclosures, including the brief description of the patient identifying information disclosed.

5. Other Comments and Recommendations on the List of Disclosures Provision

Public Comments

One commenter recommended that SAMHSA allow consent to include a description of HIE as a function to support patient care, and exclude this function from the information disclosure accounting [List of Disclosure] requirement.

A commenter recommended that SAMHSA offer additional guidance on best practices and make infrastructure grants available to create the necessary modifications within providers' EHRs or other consent tracking systems.

Some commenters made other suggestions. For example, a commenter requested that SAMHSA define "in writing" and "written requests" as those terms are used in the List of Disclosures provision (§ 3.13(d)). Another commenter urged SAMHSA to explore options to reduce the cost of the List of Disclosures provision and further clarify how the enhanced protection of substance use disorder treatment information can be consistent and interoperable with other health systems.

SAMHSA Response

As for the request to define "in writing" and "written requests" as those terms are used in the List of Disclosures provision, in the NPRM preamble discussion of Terminology Changes, SAMHSA explained that for the purposes of this regulation, we also propose that the term "written" include both paper and electronic documentation.

The consent requirements (§ 2.31) include the option of including in the "To Whom" section of the consent form the name of an entity that does not have a treating provider relationship with the patient whose information is being disclosed (and is not a third-party payer that requires patient identifying information for the purposes of reimbursement for the services rendered by the part 2 program) and either the name(s) of an individual participant(s); or the name(s) of an entity participant(s) that has a treating provider relationship with the patient whose information is being disclosed; or a general designation of an individual or entity participant(s) or class of participant(s) who has a treating provider relationship with the patient whose information is being disclosed. Any HIE that serves as an intermediary is subject to the List of Disclosures requirement regardless of its other "functions." Regarding the requests for guidance, SAMHSA may issue additional subregulatory guidance on this provision after this final rule is published.

G. Security for Records (§ 2.16)

SAMHSA is adopting this section as proposed except for some non-substantive, technical changes to the language in proposed § 2.16(a)(2)(i). SAMHSA is modernizing this section to address both paper and electronic records. First, SAMHSA revised the heading by deleting the word "written"

so that it now reads: Security for Records. Secondly, SAMHSA clarified that this section requires both part 2 programs and other lawful holders of patient identifying information to have in place formal policies and procedures for the security of both paper and electronic records. Finally, SAMHSA has replaced language in other sections of part 2 with a reference to the policies and procedures established under § 2.16, where applicable. As noted above, SAMHSA has made some technical changes to the language in proposed § 2.16(a)(2)(i). In particular, to more closely align with the HIPAA Security Rule, SAMHSA has revised § 2.16(a)(2)(i) to require that part 2 program security for electronic records policies must include "creating, receiving, maintaining, and transmitting such records." The proposed language was "copying, downloading, forwarding, transferring, and removing such records."

Public Comments

Some commenters supported the proposed provisions on security and stated that they provide appropriate protections. However, many commenters asserted that the security provisions of HIPAA should be followed and that those requirements should satisfy the part 2 provisions.

A commenter also supported the use of internal confidentiality agreements.

A commenter expressed concern that the rule does not address what a non-part 2 provider who receives part 2 data must do to ensure adequate safeguards are in place. Similarly, another commenter expressed concern about security obligations that would be placed on other lawful holders, such as courts, law firms, family members, or other private citizens who are often not the types of providers subject to the current (1987) part 2.

One commenter recommended an expiration date for electronic records. Another commenter recommended that the use of secure, certified HIT be added as a requirement for part 2 program providers, as well as any services provided that conduct audits and evaluations related to transition of patient information.

SAMHSA Response

SAMHSA appreciates the support of commenters on this issue. On the issue of HIPAA, covered entities must comply with all regulations that are applicable to them. Because some entities subject to this rule are not subject to HIPAA, SAMHSA may provide subregulatory guidance after the rulemaking on the extent to which compliance with

HIPAA security requirements, for those subject to them, will satisfy § 2.16. SAMHSA emphasizes that if an entity already has security practices and policies in place that meet the requirements of this rule, whether those practices were developed to meet the regulatory requirements or simply as a matter of good practice, the entity may not need to take additional action on this issue. In the NPRM, SAMHSA suggested resources for part 2 programs and other lawful holders for developing formal policies and procedures including materials from the HHS Office for Civil Rights (e.g., *Guidance Regarding Methods for De-identification of Protected Health Information in Accordance with the Health Insurance Portability and Accountability Act (HIPAA) Privacy Rule*), and the National Institute of Standards and Technology (NIST) (e.g., the most current version of the *Special Publication 800-88, Guidelines for Media Sanitization*).

On the issue of use of internal confidentiality agreements and the required use of secure, certified Health IT, § 2.16 provides requirements for formal policies and procedures to reasonably protect against unauthorized uses and disclosure of patient identifying information and to protect against reasonably anticipated threats or hazards to the security of patient identifying information. A part 2 program or other lawful holder of patient identifying information may impose any additional requirements that they feel will enhance protections.

With regard to security of the records lawfully obtained by non-part 2 programs, § 2.16 applies equally to these entities (referred to as lawful holders of patient identifying information). The required formal policies and procedures are intended to ensure protection of patient identifying information when electronic records are exchanged electronically using health IT, as well as when they are exchanged using paper records. In addition, the formal policies and procedures will have to address, among other things, the sanitization of hard copy and electronic media, which is addressed in the NPRM discussion of Disposition of Records by Discontinued Programs (§ 2.19). On the concern raised that § 2.16 places an unreasonable burden on courts, law firms, family members, or other private citizens who may obtain the information, a patient who has obtained a copy of his or her records or a family member or private citizen who has received such information from a patient would not be considered a lawful holder of patient identifying information in this context. Generally,

consents and permissible disclosures are initiated by a lawful holder who desires the information and, therefore, the lawful holder would already be familiar with part 2.

H. Disposition of Records by Discontinued Programs (§ 2.19)

SAMHSA is modifying this section from that proposed in the NPRM in response to public comments, as discussed below. In this section, SAMHSA addresses the disposition of both paper and electronic records by discontinued programs, including added requirements for sanitizing paper and electronic media, which is distinctly different from deleting electronic records and may involve clearing (using software or hardware products to overwrite media with non-sensitive data) or purging (degaussing or exposing the media to a strong magnetic field in order to disrupt the recorded magnetic domains) the information from the electronic media. If circumstances warrant the destruction of the electronic media prior to disposal, destruction methods may include disintegrating, pulverizing, melting, incinerating, or shredding the media. SAMHSA expects the process of sanitizing paper media (including printer and facsimile (FAX) ribbons, drums, etc.) or electronic media to be permanent and irreversible, so that there is no reasonable risk that the information may be recovered. For the purpose of this rule, SAMHSA makes a distinction between electronic devices (something that has computing capability, such as a laptop, tablet, etc.) and electronic media (something that can be read on an electronic device, such as a CD/DVD, flash drive, etc.).

Public Comments

A commenter expressed support for the proposal related to disposition of records by discontinued programs. Another commenter recommended that the rule allow for “selective sanitizing,” using methods that will not require overwriting the entire electronic media. Two commenters asked about patient records when a program is acquired by another program. A commenter suggested that the rule should address situations in which a patient cannot be located or is deceased and cannot give consent. The commenter provided multiple suggestions relating to disposition of records, including permit more flexible means of storage; permit scanning and electronic storage of records; do not require transfer to a portable device; offer an option to store records in a production encrypted network storage device. This commenter also asserted that sanitation of

electronic communications would not be feasible in organizations storing millions of electronic records; requiring storage of a portable electronic device in a sealed container does not add additional security if it is already encrypted; and deleting substance use information from records does not conceal the fact that someone has a substance use disorder but instead highlights the fact.

SAMHSA Response

SAMHSA acknowledges the support for the proposed provision. With regard to the issue of multiple sources of records, we have revised the language in the final rule to allow one year to complete the process of sanitizing paper or electronic media (*see* § 2.19(b)(2)(iii)). This change should allow for select patient records to be removed from both the specific site and any operational sources without disrupting other patient records. Regarding acquisition of one program by another, the § 2.19(a) regulatory text outlines the exceptions to removing patient identifying information from its records or destroying its records.

If the patient cannot be located or is deceased and cannot give consent, the part 2 program that has discontinued operations or is taken over or acquired by another program, must remove the patient’s identifying information from its records, including sanitizing any associated hard copy or patient records or patient identifying information residing on electronic media, to render the patient identifying information non-retrievable in a manner consistent with policies and procedures under § 2.16.

Regarding comments on more flexible means of electronic record storage, SAMHSA has revised § 2.19(b)(2) to allow for more flexibility. The revised language allows for electronic records to be transferred to a portable electronic device with implemented encryption to encrypt the data at rest so that there is a low probability of assigning meaning without the use of a confidential process or key and implemented access controls for the confidential process or key (*see* § 2.19(b)(2)(i)); or transferred, along with a backup copy, to separate electronic media, so that both the records and the backup have implemented encryption to encrypt the data at rest so that there is a low probability of assigning meaning without the use of a confidential process or key and implemented access controls for the confidential process or key (*see* § 2.19(b)(2)(ii)). For electronic storage of the records, if the records are scanned, they would have to be maintained consistent with § 2.19(b)(2) and the paper records would have to be

destroyed consistent with § 2.16. Regarding portable device storage, the final § 2.19 language specifies that the portable electronic device or the original and backup electronic media must be sealed in a container along with any equipment needed to read or access the information. The sealed container prevents the portable electronic device or the original and backup electronic media from being separated from the equipment needed to read or access the information.

I. Notice to Patients of Federal Confidentiality Requirements (§ 2.22)

SAMHSA is adopting this section as proposed. Consistent with the NPRM, SAMHSA considers the term “written” to include both paper and electronic documentation. Accordingly, the notice to patients may be either on paper or in an electronic format. SAMHSA also revised § 2.22(b)(2) to require the statement regarding the reporting of violations to include contact information for the appropriate authorities.

Public Comments

Several commenters expressed support for the proposed provisions, particularly the allowing of electronic notice, and they encouraged the use of plain language and notices in languages other than English. Several commenters recommended that SAMHSA should make a sample notice or language available to covered entities. One commenter asked how written notice can be provided for encounters that are not in person.

Other commenters suggested that the patient be given copies rather than written summaries of state and federal law; a paper report, if requested; the right to request and obtain restrictions; and a description of how patient information may be disclosed for scientific research.

SAMHSA Response

The final rule requires that the notice include contact information for the appropriate authorities for reporting violations. SAMHSA believes this change will make it easier for patients to identify to whom they should file a complaint of a potential violation of part 2. Therefore, SAMHSA declines to include a sample complaint form at this time but may consider whether to issue one outside of this rulemaking process. SAMHSA also declines to require copies rather than summaries of state and federal law because the notice to patients of federal confidentiality requirements is required to provide citations to the federal law and

regulations that protect the confidentiality of patient records and including information concerning state laws and regulations is optional. The notice must also be provided in writing but as was discussed in Terminology Changes (§ 2.11), the term “in writing” includes both paper and electronic documentation. Because the purpose of the notice is to communicate to the patient the federal law and regulations that protect the confidentiality of patient records, SAMHSA declines to require anything additional. However, if a part 2 program wishes to provide additional information, nothing in this provision prohibits them from doing so.

J. Consent Requirements (§ 2.31)

SAMHSA is finalizing the consent requirements in this section, with certain modifications as described in greater detail below. In summary, SAMHSA is adopting all proposed changes to § 2.31 except for two at this time. In the “From Whom” section of the consent requirements (§ 2.31(a)(2)), SAMHSA decided not to finalize its proposal to remove the general designation option, but did make minor updates to the terminology in the current (1987) regulatory text. As explained in greater detail below, the final “From Whom” provision of the consent requirements specifies that a written consent to a disclosure of part 2 information must include the specific name(s) or general designation(s) of the part 2 program(s), entity(ies), or individual(s) permitted to make the disclosure. SAMHSA also decided not to finalize the proposed requirement that a part 2 program or other lawful holder of patient identifying information obtain written confirmation from the patient that they understand the terms of the consent.

SAMHSA has revised the section heading from “Form of written consent” to “Consent requirements.” SAMHSA also made revisions to the two other sections of the consent form requirements: the “To Whom” section and the “Amount and Kind” section. SAMHSA also revised § 2.31 to require a part 2 program or other lawful holder of patient identifying information to include on the consent form that patients, when using a general designation in the “To Whom” section of the consent form, have the right to obtain, upon request, a List of Disclosures (*see* § 2.13). In addition, SAMHSA revised § 2.31 to permit electronic signatures to the extent that they are not prohibited by any applicable law.

1. General Comments on Consent Requirements

a. General

Public Comments

SAMHSA received many comments on the proposed rule’s updated consent requirements. Some commenters generally supported the new consent requirements. Other commenters listed various reasons for their support, including increased facilitation of informed patient decisions, increased patient choice with regard to protection of their health information, and increased sharing of health care records among providers. One commenter supported the use of paper and electronic forms of written consent.

Many commenters, however, expressed general opposition to the proposed consent requirements. Several commenters argued that the proposed rule created unnecessary burdens for providers, such as staff training, constant updates to consent forms, and expensive updates to provider EHRs. Several commenters argued the proposed consent rules would create obstacles to information sharing and integrated care. Specifically, a commenter argued that the “To Whom” and “From Whom” format restricts who within organizations can view a patient’s records, further hampering coordinated care. Another commenter argued that the proposed consent form requirements would make it difficult for many HIEs to exchange part 2 information, and that the new requirements do little to promote a patient’s informed consent. A couple of commenters argued that the proposed regulations would reduce access to substance use disorder treatment being added by general health care organizations, due to administrative burden and liability fears. General health care providers are less likely to add substance use disorder treatment, or partner or undertake projects with substance use disorder treatment providers. Another commenter stated this rule may result in providers not screening patients for substance use disorders and not documenting substance use disorder related information.

According to a few commenters, the current part 2 regulations exceed the statutory requirements that led to the regulations. One commenter suggested that 42 U.S.C 290dd–2 requires consent to share information and does not allow any shared information to be used for prosecution. The commenter goes on to state that nothing in Title 42, U.S.C. 290dd–2 requires an explicit description

of what information can be released, or requires time limits on consent. The commenter suggested that SAMHSA could reduce confusion and administrative burden by proposing revisions that are much more consistent with HIPAA than its current proposal.

SAMHSA Response

Regarding the comments on statutory authority, we do not agree that the regulations in 42 CFR part 2 exceed the authority provided for in 42 U.S.C. 290dd–2. The statute specifies that patient identifying information may be disclosed in accordance with prior written patient consent, “but only to such extent under such circumstances, and for such purposes as may be allowed under regulations prescribed” by the Secretary.

Regarding concerns about unnecessary burdens for providers, such as staff training, constant updates to consent forms, and expensive updates to provider EHRs, these burdens might be offset by the benefits of increased in flexibility in the consent requirements. With respect to obstacles to information sharing, one of SAMHSA’s goals for this rulemaking is to ensure that patients with substance use disorders have the ability to participate in and benefit from new integrated health care models without fear of putting themselves at risk of adverse consequences.

Public Comments

Some commenters stressed that consent forms should be easy to read, accessible to limited English proficiency patients, and should meet HIPAA’s plain language requirements. Commenters stated that language and literacy concerns could be barriers to actual understanding of the form’s contents. Similarly, suggesting that SAMHSA take into account the reading level standards in other health programs, including Medicare and Medicaid, one commenter asserted that the proposed regulations do not provide adequate options for an individual to easily and simply determine who can or cannot access their substance use disorder records.

SAMHSA Response

SAMHSA agrees with the commenters that the consent form should be written clearly so that the patient can easily understand the form. SAMHSA is considering issuing subregulatory guidance in the future to provide examples of forms that comply with the basic consent requirements in 2.31(a). In addition, SAMHSA encourages part 2 programs to be sensitive to the cultural and linguistic composition of their

patient population when considering whether the consent form should also be provided in a language(s) other than English (e.g., Spanish).

b. Consent Form Validity Period

Public Comments

Several commenters stated that a two-year time limit for the validity of consent is insufficient, with some commenters suggesting that consent forms be valid indefinitely or until death. For example, one commenter asked why SAMHSA would deny a person who has received substance use disorder treatment the right to decide that they want any and all information regarding their treatment shared with any and all of their health care providers indefinitely as needed for coordination of care. Another commenter stressed the language of § 2.31(a) was confusing and requested clarification on the permissible length of time a consent is valid.

SAMHSA Response

Under § 2.31, a part 2-compliant consent form must list the date, event, or condition upon which the consent will expire, if not revoked before. Thus, it is not sufficient under part 2 for a consent form to merely state that that disclosures will be permitted until the consent is revoked by the patient. It is, however, permissible for a consent form to specify the event or condition that will result in revocation, such as having its expiration date be “upon my death.” The rule does not set a two-year time limit for consents, as some commenters thought.

c. Technical Challenges to Proposed Consent Requirements

Public Comments

Commenters expressed concern about the technical challenges providers would face in complying with the proposed consent requirements. Generally, commenters expressed concern that few, if any, EHR systems and/or HIEs have the capability to segregate substance use disorder patient information in a way that could fully support the rule by reflecting the patient's consent choices, and many providers would have to expend significant amounts of funds to create or acquire a compliant system. Commenters argued that if providers do not have data segmentation capability, they may simply exclude substance use disorder patient data from their systems, thus adversely impacting system integration and patient care.

A couple of commenters asserted that EHR, HIE, and other electronic records

systems have no way of selecting different levels of consent for treating providers. Specifically, a commenter stated that SAMHSA should remove requirements for varied levels of consent within a given organization (e.g., between departments or individuals), instead limiting such variation to HIEs that share information between or across organizations. A commenter stated that it is not feasible to do individual exclusionary consents in an HIE, especially for an entity that has thousands of employees across multiple states.

A commenter stated that providers in an integrated care network may be precluded from performing important quality improvement checks because no set of clinically integrated network officials can be expected to have a direct treatment relationship with every patient in the large data pools necessary to drive these important public health efforts.

A commenter stated that the confidentiality of a substance use disorder patient's information should not be compromised if some electronic systems were poorly designed and without regard for part 2. Similarly, another commenter stated that technology should be regarded as a tool and should not diminish a patient's privacy rights.

SAMHSA Response

SAMHSA acknowledges the concerns regarding technical challenges to the consent requirements and data segmentation more broadly. As stated above, SAMHSA has played a significant role in encouraging the use of health IT by behavioral health (substance use disorders and mental health) providers and towards minimizing technical burdens through a variety of activities. SAMHSA actively participates in the development and stewarding of data standards to promote data segmentation and interoperability. Specifically, the Data Segmentation for Privacy (DS4P) initiative within ONC's Standards and Interoperability (S&I) Framework facilitated the development of standards to improve the interoperability of EHRs containing sensitive information that must be protected to a greater degree than other health information due to 42 CFR part 2 and similar state laws. The DS4P standards were used in several pilot projects, including the Department of Veterans Affairs (VA)/SAMHSA Pilot, which implemented all the DS4P use cases and passed all conformance tests; and SAMHSA's Opioid Treatment Program (OTP) Service Continuity Pilot that connected OTPs to an HIE to

facilitate continuity of care during disasters or other unexpected disruptions in service. Additionally, DS4P standards were adopted in ONC's 2015 Edition final rule (80 FR 62702, Oct. 16, 2015) as part of the 2015 Edition Health IT Certification Criteria (2015 Edition). See 45 CFR 170.315(b)(7) and (8). SAMHSA has also supported the development of the application branded Consent2Share, an open-source health IT solution based on DS4P, which assists in consent management and data segmentation and is currently being used by the Prince Georges County (Maryland) Health Department to manage patient consent directives while sharing substance use disorder information with an HIE. SAMHSA is currently updating Consent2Share, slated for release in late 2016, with the aim that its streamlined data stack and improved functionality will lower barriers to implementation in the field. SAMHSA is considering issuing subregulatory guidance in the future to address other technical solutions to complying with the regulation.

Regarding the comment that it is not feasible to do individual exclusionary consents in an HIE, the HIE does not have to give the patient the option to do individual level consent. SAMHSA has provided more flexibility in the consent provisions in an effort to ensure that patients with substance use disorders have the ability to participate in and benefit from new integrated health care models while, at the same time, maintaining core confidentiality protections.

d. Requests for Exemptions and Exceptions

Public Comments

Several commenters requested various exemptions or exceptions from the part 2 consent requirements, including a public health exception similar to that of the HIPAA Privacy Rule (see <http://www.hhs.gov/hipaa/for-professionals/special-topics/public-health/index.html>), an exemption for CCOs who have a treating relationship with a patient, an exemption for ACOs who have integrated delivery systems, an exception for state health data organizations that collect data under legislative authority and collection of substance use disorder data by state agencies, and in instances where part 2 data may be used to improve patient care coordination, ensure interoperability, and ensure patient safety. One commenter requested an exception for care coordination purposes for valid and vital clinical reasons.

Regarding § 2.20 (Relationship to state laws), a commenter said SAMHSA should include an exception under part 2, subpart D (Disclosures Without Patient Consent) allowing disclosures of substance use disorder treatment information based on state laws that authorize or compel such disclosures (e.g., for public health or medical assistance reasons). Another commenter, noting the role of multi-payer claims databases or MPCDs (also known as all payer claims databases (APCDs)), suggested that SAMHSA add a new section to include state health data organizations that collect data under a legislative authority, reasoning that these states have decades of experience in collecting and managing sensitive data with strict legal and policy controls.

A commenter said SAMHSA should permit oral consent with documentation and specific information to be shared.

SAMHSA Response

SAMHSA appreciates the perspectives expressed by those who seek additional exceptions or exemptions from part 2 consent requirements, as well as the suggestion that SAMHSA permit oral consents that are documented in writing.

The part 2 underlying statute, 42 U.S.C. 290dd-2, and this rule require a written patient consent to disclose part 2 information unless the disclosure is otherwise permitted under the part 2 statute or regulations. The statute, for instance, does not provide a general exception to the consent requirement for the purpose of sharing information with public health officials. In certain circumstances, disclosures of part 2 information may be authorized by court order to protect against an existing threat to life or of serious bodily injury (see § 2.63, Confidential communications) or to the extent necessary to meet a bona fide medical emergency in which the patient's prior informed consent cannot be obtained (see § 2.51, Medical emergencies). SAMHSA may in the future consider issuing subregulatory guidance to further describe medical emergencies under § 2.51 and how such emergencies may relate to public health emergencies declared at the federal, state, local, and/or tribal levels. SAMHSA does not, however, have the statutory authority to authorize routine disclosure of part 2 information for public health reporting, surveillance, investigation or intervention purposes.

With respect to § 2.20 (Relationship to state laws), in the proposed and final rules SAMHSA maintains current language regarding preemption. As

discussed above, SAMHSA cannot develop a new general exception for public health or medical assistance purposes in light of the statute. Likewise, SAMHSA cannot develop a specific new exception for APCDs (hereinafter referred to as MPCDs). The role of MPCDs is discussed in the section of this preamble concerning research (§ 2.52). SAMHSA disagrees with the recommendations to consider a specific exemption to the consent requirements for ACOs that have integrated delivery systems, except as described in § 2.53 for the purposes of audits and evaluations. Similarly, SAMHSA is not accepting the suggestion to provide a specific exemption from the part 2 consent requirements for CCOs that have a treating provider relationship with a patient (*i.e.*, that meet the definition of having a treating provider relationship with the patient whose information is being disclosed). SAMHSA believes that the final changes to the consent requirements will facilitate care coordination and information exchange. Improving the quality of substance use disorder care depends on effective collaboration of mental health, substance use disorder, general health care, and other service providers in coordinating patient care. However, the composition of a health care team varies widely among entities. Because SAMHSA wants to ensure that patient identifying information is only disclosed to those individuals and entities on the health care team with a need to know this sensitive information, we are limiting a general designation in the "To Whom" section of the consent requirements to those individuals or entities with a treating provider relationship. Patients may further designate their treating providers as "past," "current," and/or "future" treating providers. In addition, the consent form can include multiple authorizations in the "To Whom" section. A consent may allow a patient to designate, by name, one or more individuals with whom they do not have a treating provider relationship, that they authorize to receive or access their health care data.

While we are not establishing specific additional exemptions or exclusions from the consent requirements at this time in response to commenters' suggestions, in light of the longstanding role that contractors and subcontractors play in the health care system and their handling of part 2 data, we are issuing an SNPRM related to lawful holders' use of contractors and subcontractors.

e. Commenter Recommendations

Public Comments

Some commenters said SAMHSA should expand the list of persons who could view the patient's medical record without the patient's written consent to include clergy, social workers, psychologists and family members if in their professional opinion they were necessary for the patient's recovery and progress. Another commenter recommended expanding the list to include all types of professionals involved in the treatment of individuals receiving substance use treatment into the respective definitions, including those employed in social services that are members of the treatment team.

SAMHSA Response

The definition of "treating provider relationship" is sufficiently broad to cover the necessary components of a patient's care team. The statute, 42 U.S.C. 290dd-2, does not provide an exception to the consent requirement for the purpose of sharing information with family members. Part 2, therefore, requires a part 2-compliant consent to disclose patient identifying information unless disclosure is otherwise permitted under the statute or regulations.

Public Comments

Many commenters said SAMHSA should provide a sample consent form. Some commenters stated that any sample consent form should not be mandated to allow stakeholders flexibility.

SAMHSA Response

SAMHSA may, after publication of this rule, issue subregulatory guidance that includes a sample consent form that meets the specifications of the final rule. SAMHSA has never and has no intention of mandating the use of a specific consent form.

Public Comments

Several commenters generally supported the use of electronic signatures. Several commenters only supported electronic signatures when also authorized under state law. A couple of commenters requested guidance on what steps the provider would need to take to verify identity, provide the required prefatory information and to obtain a substance use disorder patient's electronic signature. A commenter requested guidance from SAMHSA on the areas modified by SAMHSA. A commenter said SAMHSA should identify the signatory and enforceability

consideration of electronic consent through reference to other laws.

SAMHSA Response

Because there is no single federal law on electronic signatures and there may be variation in state laws, SAMHSA recommends that stakeholders consult their attorneys to ensure they are in compliance with all applicable laws.

Public Comments

Some commenters made recommendations for patient privacy protection. One commenter noted that the use of secure, certified health IT, networks, and devices, especially for the transmission of patient records, does not appear to be included in the proposed provisions. Another commenter said meaningful consents could only be achieved by adding statements that inform the patient of the unprecedented risks of making highly sensitive substance use disorder information accessible throughout integrated health care systems or electronic health

information systems that cannot be made secure.

A commenter stated the proposed rule did not address revocation or refusal of consent. Similarly, another commenter recommended adding language that makes clear that revocation of consent prevents unauthorized access but does not remove the information from the electronic record.

SAMHSA Response

Section 2.16 addresses security for records and requires formal policies and procedures to reasonably protect against unauthorized use and disclosures of patient identifying information and to protect against reasonably anticipated threats or hazards to the security of patient identifying information. Whereas this provision does not specifically address the use of certified health IT networks, and devices, they may be used as long as the requirements of section 2.16 are met. Regarding revocation of consent, § 2.31(a)(6) requires: “A statement that the consent

is subject to revocation at any time except to the extent that the part 2 program or other lawful holder of patient identifying information that is permitted to make the disclosure has already acted in reliance on it. Acting in reliance includes the provision of treatment services in reliance on a valid consent to disclose information to a third-party payer.” To the extent an individual refuses to consent to the disclosure of their patient identifying information, part 2 prohibits such disclosure unless otherwise permitted under the statute or regulations (*e.g.*, audit or evaluation, or scientific research).

2. To Whom

SAMHSA is adopting this aspect of the proposal. SAMHSA has moved the former § 2.31(a)(2), “To Whom” provision, to § 2.31(a)(4). The following table provides an overview of the options permitted when completing the designation in the “To Whom” section of the consent form.

TABLE 1—DESIGNATING INDIVIDUALS AND ORGANIZATIONS IN THE “TO WHOM” SECTION OF THE CONSENT FORM

42 CFR 2.31	Individual or entity to whom disclosure is to be made	Treating provider relationship with patient whose information is being disclosed	Primary designation	Required additional designation
(a)(4)(i)	Individual	Yes	Name of individual(s) (<i>e.g.</i> , Jane Doe, MD).	None.
(a)(4)(i)	Individual	No	Name of individual(s) (<i>e.g.</i> , John Doe)	None.
(a)(4)(ii)	Entity	Yes	Name of entity (<i>e.g.</i> , Lakeview County Hospital).	None.
(a)(4)(iii)(A)	Entity	No	Name of entity that is a third-party payer as specified under § 2.31(a)(4)(iii)(A) (<i>e.g.</i> , Medicare).	None.
(a)(4)(iii)(B)	Entity	No	Name of entity that is not covered by § 2.31(a)(4)(iii)(A) (<i>e.g.</i> , HIE, or research institution).	At least one of the following: 1. The name(s) of an individual participant(s) (<i>e.g.</i> , Jane Doe, MD, or John Doe). 2. The name(s) of an entity participant(s) with a treating provider relationship with the patient whose information is being disclosed (<i>e.g.</i> , Lakeview County Hospital). 3. A general designation of an individual or entity participant(s) or a class of participants limited to those participants who have a treating provider relationship with the patient whose information is being disclosed (<i>e.g.</i> , my current and future treating providers).

If a general designation is used, the entity must have a mechanism in place to determine whether a treating provider relationship exists with the patient whose information is being disclosed. Patients may further designate their treating providers as “past,” “current,” and/or “future” treating providers. In addition, a patient may designate, by name, one or more individuals on their health care team with whom they do not have a treating provider relationship.

a. General

Public Comments

Several commenters generally agreed with the proposed “To whom” section of the consent requirements, stating that it allows patients to disclose substance use disorder information to past, current, or future treating providers; would improve information and data sharing for health care, especially for entities that are continually adding new members; allow patients to remain in

control of their substance use disorder information and understand who had access to their data. One commenter supported the express permission to designate the name of the entity for third-party payers that require patient identifying information for purposes of reimbursement of services rendered to the patient.

Many commenters offered general support for the proposed rule’s general designation. Some commenters stated that the general designation creates a

balance between patient privacy and operational functions, facilitates internal communication within an integrated delivery system, streamlines the consent process, reduces administration burdens, creates new flexibility, may help facilitate increased behavioral health participation in some HIEs around the country, and would help improve the quality and continuity of care within integrated delivery models. A commenter supported the expansion of the use of a general designation when there is a treating provider relationship, but said it is unworkable to require an updated consent form every time new entities are added to the “umbrella” consent.

Some commenters generally disagreed with the proposed “To Whom” provision of the consent requirements. Several commenters argued that the proposal was burdensome, would create additional complexity, would reduce information sharing, and would not improve patient privacy protections or facilitate informed consent. Commenters stated it is unnecessary and impractical to require the consent form to name every HIE and other intermediaries that may assist in transmitting or providing access to the patient’s information. A couple of commenters stated the proposed rule would restrict the ability of patients to specifically name an entity or to authorize part 2 programs to send their information to entities that do not have a treatment relationship [treating provider relationship]. Another commenter said the regulatory preface mentions a number of very specific drivers of this purported need for broader sharing (such as HIEs), but the regulatory language itself contains no such limitation and offers HIE only as an illustrative example.

Many commenters specifically did not support the general designation in the “To Whom” section. Some commenters claimed that the proposal presumes each person entering a treatment process has the ability to understand the longer-term consequences, or that substance use disorder patients, who are under tremendous stress, would simply choose the general designation because it was easiest. A commenter said the general designation does not guarantee that a HIE or other organizations will send all patient data, which could be a critical source of information in the case of an emergency.

SAMHSA Response

A patient may consent to designate, for example, an HIE (an entity that does not have a treating provider relationship with the patient whose information is being disclosed) and “all my treating

providers” (a general designation of an individual or entity participant(s) or a class of individual or entity participants that must be limited to a participant(s) who has a treating provider relationship with the patient whose information is being disclosed). Using the same concept, an ACO, pursuant to a general designation, may disclose information described in the “Amount and Kind” section of a consent form (explained further in 3. Amount and Kind) to “all my entity treating providers.” If a general designation is used, the entity must have a mechanism in place to determine whether a treating provider relationship exists with the patient whose information is being disclosed (e.g., an attestation). In the HIE and ACO examples above, the entity that does not have a treating provider relationship with the patient whose information is being disclosed and serves as the intermediary may not further disclose the patient identifying information except to those providers who have a treating provider relationship with the patient whose information is being disclosed that can be verified by the intermediary. The prohibition on re-disclosure notice must be provided with the disclosure because it also applies to the treating provider(s) who receive the information from the entity that serves as an intermediary. In addition, a copy of the part 2-compliant consent form or the pertinent information on the consent form necessary for the treating provider(s) to comply with the signed consent should be provided with the disclosure.

The patient retains the ability to name only specific individuals or entities to whom their records will be disclosed. Patients have the option to use a general designation to designate entities with which they have a treating provider relationship, but are not required to do so. Although SAMHSA received comments suggesting that the proposed rule makes it more difficult to disclose necessary information to an organization that does not have a treating provider relationship with the patient whose information is being disclosed other than a 3rd party payer, the commenters did not provide examples of such entities. The final rule permits the “To Whom” section of the consent form to designate disclosure of information to an entity that does not have a treating provider relationship with the patient whose information is being disclosed, as long as the consent also includes one of three options specified in § 2.31(a)(4)(iii)(B), for example, include the name(s) of an individual participant(s).

If the patient designates all my current treating providers, and another of the patient’s treating providers becomes a participant in the entity that does not have a treating provider relationship with the patient and serves as the intermediary, a new consent form would not be required. For example, if a patient designates an HIE (an entity that does not have a treating provider relationship with the patient whose information is being disclosed and serves as an intermediary) and “my current treating providers,” and subsequently another of the patient’s treating providers becomes a participant in the HIE, a new consent form would not be required. In addition, more than one HIE or other intermediary may be listed on the consent form. With respect to burden, SAMHSA acknowledges that there may be burdens associated with the revised consent requirements. SAMHSA made these changes based on comments from stakeholders in the field and SAMHSA strongly believes that the changes to “To Whom” will increase flexibility for patients and providers.

b. Determination of Treating Provider Relationship

Public Comments

A commenter agreed with SAMHSA’s suggestion that entities must have an established mechanism for determining whether a treating provider relationship exists. However, several commenters stated that determining who has a treating provider relationship would be difficult. Commenters expressed concern that entities do not currently have mechanisms in place to determine whether a treating provider relationship exists with the patient whose information is being disclosed. Another commenter asked how an HIE would be able to determine which participants have a past/present/future treating provider relationship with the patient. A commenter stated that creating this mechanism would require additional resources and would discourage entities from sharing necessary data. Another commenter recommended a provision that exempts the provider from liability when relying in good faith on an attestation or representation from an outside treating provider.

Several commenters expressed concern that once a consent reflecting a general designation of recipients with a treating provider relationship has been executed and relied upon by the part 2 program, there is no method by which the program can ensure that the recipients are properly authenticated by the HIE or research institution. Commenters suggested the proposed

rule should specify that the HIE, ACOs, CCOs or research institution, as well as the recipient that has a treating provider relationship with the patient, be responsible for ensuring that the recipient is actually a treating provider and that the disclosure is appropriate under part 2.

A commenter requested clarification on whether care managers would be included as having a “treating provider relationship.” Another commenter requested clarification as to whether care coordinating entities that have a treating provider relationship may assign additional designees under the general designation (*e.g.*, treatment providers with different levels of care or recovery services).

Commenters recommended the language in the “To Whom” clause state “my treating providers” or “my service providers.” A commenter recommended “my substance use disorder providers” or “my treating providers except Dr. John Doe.” Another commenter recommended “my treating providers and transferring HIEs”

SAMHSA Response

Although SAMHSA understands the concerns about further clarifying when an entity is considered a treating provider, it respectfully declines to provide more specificity in the final rule than was included in the NPRM. The arrangements between treating providers and other entities evolve too rapidly to be comprehensively addressed in regulations. Although, SAMHSA has not revised the proposed text, SAMHSA may provide additional subregulatory guidance in the future if further clarification is needed. In addition, only individuals and entities that meet the definition of having a treating provider relationship with a patient are considered treating providers. The determination is fact-specific. Consistent with the NPRM, SAMHSA continues to encourage innovative solutions to implement this provision. For example, an HIE could have a policy in place requiring their participant providers to attest to have a treating provider relationship with a patient, or provide a patient portal where patients designate their treating providers.

c. Requests for Clarification

Public Comments

Some commenters requested clarification regarding the patient’s role in consent, including the patient’s ability to alter their consent, how patients can authorize disclosures to non-health entities other than third-

party payers, and what the impact would be if a patient failed to designate past, present, and future disclosures. One commenter stated that, if a patient designates an entity without a treating provider relationship and “my treating providers” without further specifying “past, present, or future,” it should be assumed that the intent is to designate “current” treating providers.

SAMHSA Response

Patients may designate on the consent form a specific individual(s) with whom they either have or do not have a treating provider relationship and/or a specific entity(-ies) with whom they have a treating provider relationship. Consents for disclosures to entities that do not have a treating provider relationship (other than third-party payers) require at least one of the following: (1) The name(s) of an individual participant(s); (2) the name(s) of an entity participant(s) that has a treating provider relationship with the patient whose information is being disclosed; or (3) a general designation of an individual or entity participant(s) or a class of participants that must be limited to a participant(s) who has a treating provider relationship with the patient whose information is being disclosed.

If a patient uses a general designation and lists “my treating providers” without further specifying “past, current, or future,” it should be presumed that the intent is to designate “current” treating providers. Finally, a patient can revoke a consent at any time, except to the extent that the part 2 program or other lawful holder of patient identifying information that is permitted to make the disclosure has already acted in reliance on it. Acting in reliance includes the provision of treatment services in reliance on a valid consent to disclose information to a third-party payer.

Public Comments

Other commenters requested clarification regarding entity roles, including whether a CCO can request a single consent for multiple purposes (*e.g.*, care coordination, treatment, and payment); whether providers need to maintain the variety of forms to meet the requirements of § 2.31(a)(4); what limitations (if any) would be placed on HIE entities or research institutions using substance use disorder information received via the new consent process, specifically whether the disclosure would not be limited to treatment purposes; and whether an HIE-to-HIE disclosure is permissible and, if so, for what purposes. A few

commenters asked whether it would be permissible to list multiple HIEs on a consent form. Similarly, another commenter recommended SAMHSA adopt a broad definition of an HIE to allow a “network of networks,” such as the statewide health information network to be considered an HIE. A commenter requested clarification as to whether 42 CFR part 2 information can flow through other HIEs not designated on the consent form to transfer the information to the recipient.

A few commenters requested clarification on how the proposed changes would impact multi-party consent forms that allow disclosure “among and between” all the parties listed on the form. Similarly, a commenter requested clarification regarding the “To Whom” and “From Whom” definitions and how they would apply between two providers to whom a patient has independently given consent to receive information, urging that the definitions be general and consistent so that they allow for bi-directional flow of information.

A commenter said SAMHSA should clarify that the provision of general consent to disclosure of substance use disorder treatment also applies to disclosure of information between those responsible for treatment in the community and those responsible for treatment in correctional settings.

SAMHSA Response

Under the changes to the consent requirements, an entity that does not have a treating provider relationship with the patient may further disclose, with a part 2-compliant consent, to a named individual who does not have a treating provider relationship with the patient.

Section 2.31(a)(4) of the consent requirements may be completed with one or more recipients. Section 2.31(a)(5) of the consent requirements requires that the consent form include the purpose of the disclosure. Part 2 allows the use of a single consent form authorizing the disclosure of part 2 patient information to different recipients for different purposes. However, part 2 also requires a consent form to specify the amount and kind of information that can be disclosed, including an explicit description of the substance use disorder information that may be disclosed, to each of the recipients named in the consent. The amount of information to be disclosed “must be limited to that information which is necessary to carry out the purpose of the disclosure (*see* § 2.13(a)). This will vary depending on the different purposes for which different

recipients are being allowed to access or receive the information. Thus the consent form would have to be structured to make it clear what information may be given to each of the recipients, and for which purposes.

Disclosure of patient identifying information made with the patient's written consent must be accompanied by a written notice regarding the prohibition on re-disclosure (*see* § 2.32). This notice informs them that 42 CFR part 2 prohibits the recipients of the patient identifying information from re-disclosing it to any individual or organization not specified in the consent form unless otherwise permitted under the part 2 statute or regulations.

The rule includes an additional patient safeguard, in which patients who have included a general designation in the "To Whom" section of their consent form (*see* § 2.31) must be provided, upon request, a list of entities to which their information has been disclosed pursuant to the general designation.

With respect to multi-party consent, SAMHSA is not finalizing the "From Whom" provision (2.31(a)(2)) as proposed for the reasons discussed in 4. "From Whom." Therefore, consents may authorize disclosures "among and between" the parties designated in the "To Whom" and "From Whom" sections of the consent form.

Public Comments

Some commenters requested clarification regarding aspects of the "To Whom" provision, such as what would happen if a person does not want to give a general designation; how the process of designating past, present, and future treating providers would work in practice; whether a Performing Provider System (PPS) could be assigned in the "To Whom" section of the consent form; and whether a health care organization would be an appropriate entity to be named for disclosure.

With regard to third-party payers, a commenter asked whether a general designation for third-party payers could be used for other purposes, such as care coordination, population health, or other services that may fall under the definition of health care operations within the meaning of HIPAA. Some commenters recommended that third-party payers should not have to be listed in the "To Whom" section of the consent form.

SAMHSA Response

With regard to third-party payers, the regulations require written consent for disclosure of patient identifying

information to third-party payers. The statute does not provide an exception to this consent requirement. However, with respect to patients who have both a substance use disorder and a mental illness, § 2.15 of the regulations states that, in the case of a patient, other than a minor or one who has been adjudicated incompetent, that for any period suffers from a medical condition that prevents knowing or effective action on their own behalf, the part 2 program director may exercise the right of the patient to consent to a disclosure under subpart C of this part for the sole purpose of obtaining payment for services from a third-party payer. In addition, in the case of minor patients, § 2.14 of the regulations states the regulations do not prohibit a part 2 program from refusing to provide treatment until the minor patient consents to the disclosure necessary to obtain reimbursement, but refusal to provide treatment may be prohibited under a state or local law requiring the program to furnish the service irrespective of ability to pay.

If an individual does not want to use a general designation, they have several other options, which are enumerated in § 2.31(a)(4) of this final rule.

If a patient does not designate "current, past, and/or future" treating provider(s), the presumption is that the patient means "current treating provider(s)." SAMHSA may, after publication of this final rule, also provide further clarification on this process of designating past, present, and future treating providers in subregulatory guidance.

Whether a PPS or a health care organization may be listed in the "To Whom" section of the consent form depends upon whether they have a treating provider relationship with the patient whose information is being disclosed. If an entity does have a treating provider relationship with the patient, the entity name may be listed on the consent (*see* § 2.31(a)(4)(ii)). However, if the entity does not have a treating provider relationship with the patient whose information is being disclosed, and is not a third-party payer, the entity name may be listed on the consent form as long as one or more of the following is also listed: (1) The name(s) of an individual participant(s); (2) the name(s) of an entity participant(s) that has a treating provider relationship with the patient whose information is being disclosed; or (3) a general designation of an individual or entity participant(s) or a class of participants that must be limited to those participants who have a treating provider relationship with the

patient whose information is being disclosed.

SAMHSA plans to address issues concerning third-party payer use and disclosure of part 2 information in greater detail in an SNPRM.

d. Commenter Recommendations

Public Comments

Commenters recommended more flexibility in the "To Whom" section. Commenters recommended that SAMHSA expand the general designation to include all of the various participants in the modern health care system and their respective activities: Providers, care managers, health plans and ACOs, MCO services, CCOs, and similar integrated health care networks. One commenter said the general designation should include those who do not have a treating provider relationship with the patient but who/which require access to the patient's information solely in relation to fulfilling a specific function for the benefit of the individual or entity that has the treating provider relationship with specific patients. Another commenter requested that SAMHSA allow patients to generally consent to disclose information to any company assisting in processing their insurance claims. Another commenter suggested that patients be able to name as many treating providers as they wish under the general designation. One commenter said patients should be permitted to provide a generalized consent for all of their previous providers to disclose information. One commenter said generic consent (*i.e.*, disclosure through an HIE) is all that should be required because SAMHSA has previously provided guidance that HIEs may have access to part 2 information under a QSO agreement without patient consent. A commenter said the rule should allow for the general designation of certain types of non-treating providers, rather than require a listing of the name of each entity.

In contrast, other commenters suggested increased limitations on the "To Whom" designation. A commenter proposed excluding health information networks and health information organizations (HIOs) from being specifically identified on patient consent form because they are not true recipients of patient health information and simply facilitate electronic exchange of information. One commenter recommended that SAMHSA preserve the patient's right of consent to disclosures only to specifically identified practitioners

involved in their mental health treatment.

Regarding third-party payers, several commenters recommended allowing third-party payers to act as intermediaries for purposes of sharing substance use disorder information, allowing them to share information with all of the patient's treating providers. Another commenter requested general designation for third-party payers. To accommodate the operational realities of Medicaid, a commenter stressed that the rule should explicitly provide that consent to disclose covered data to Medicaid constitutes consent to release such data to Medicaid or to the payer's contracted entity (e.g. the MCO) to apply to both entities as a third-party payer. Similarly, another commenter recommended that the rule consider a designation to the name of the state agency, the MCO, or simply Medicaid as consent that applies to the state and its contracted delivery system, reasoning that not all Medicaid beneficiaries understand their health care system.

SAMHSA Response

SAMHSA acknowledges the commenters' concerns related to the recommendations above. SAMHSA has concluded that the proposed changes to the consent requirements would facilitate care coordination and information exchange. Improving the quality of substance use disorder care depends on effective collaboration of mental health, substance use disorder, general health care, and other service providers in coordinating patient care. However, the composition of a health care team varies widely among entities. Because SAMHSA wants to ensure that patient identifying information is only disclosed to those individuals and entities on the health care team with a need to know this sensitive information, we are limiting a general designation to those individuals or entities with a treating provider relationship. Patients may further designate their treating providers as "past," "current," and/or "future" treating providers. In addition, a patient may designate, by name, one or more individuals on their health care team with whom they do not have a treating provider relationship. SAMHSA clarifies that a QSO can be used to share part 2 information with the HIE when the HIE is a service provider to the part 2 program, but the QSO cannot be used to share information with the members of an HIE without patient consent.

As for third-party payers and others, SAMHSA must balance the need for and benefits of care coordination with the need for consent and the requirements of the part 2 governing statute.

SAMHSA declines to adopt commenter recommendations to allow third-party payers to serve as intermediaries that could share information with all the patient's treating providers because we conclude that the "To Whom" consent requirements are sufficiently broad to cover the necessary components of a patient's care team. For purposes of payment-related activities, to the extent that federal or state law authorizes or requires that the Medicaid or Medicare agency or program share data or enter into a contractual arrangement or other formal agreements to do so, consent to disclose patient identifying information to the agencies or programs (as a third-party payer) under section 2.31(a)(4)(iii)(A) is considered to extend to the contractors and subcontractors of the agencies or programs.

Commenters have provided SAMHSA with informative feedback on how lawful holders, including third-party payers and others within the healthcare industry, use health data or hire others to use health data on their behalf to provide operational services such as independent auditing, legal services, claims processing, plan pricing and other functions that are key to the day-to-day operation of entities subject to this rule. Those comments indicate that there may be varying interpretations of the part 2 rule's restrictions on lawful holders and their contractors' and subcontractors' use and disclosure of part 2-covered data for purposes of carrying out payment, health care operations, and other health care related activities. In consideration of this feedback and given the critical role third-party payers, other lawful holders, and their contractors and subcontractors play in the provision of health care services, SAMHSA is issuing an SNPRM to seek further comments and information on this matter before establishing any appropriate restrictions.

Public Comments

Instead of listing organizations in the "To Whom" section, a commenter recommended that a consent form should specify the reasons for disclosure (e.g. care coordination, management of benefits).

SAMHSA Response

In addition to the "To Whom" section, the consent form is required to include how much and what kind of information is to be disclosed, including an explicit description of the substance use disorder information that may be disclosed. In addition, the consent form must include the purpose of the disclosure. All the required elements

must be included on the consent form. SAMHSA declines to make the suggested change to allow the "Purpose" of the consent to dictate the recipients of the patient identifying information. The intent of SAMHSA's approach to the "To Whom" section of the consent form is to provide the patient options for the degree to which they will be able to identify, at the point of consent, who they are authorizing to receive their information.

Public Comments

A commenter stated that SAMHSA should explicitly recognize and include health plan care services, such as managed care, care coordination, case management and other integrated care activities as part of the required elements for written consent for entities that do not have a treating provider relationship with the patient under proposed § 2.31(a)(4)(iv).

A commenter stated any privacy concerns could be fixed by requiring (1) a general designation of a class of participants with a treating provider relationship; and (2) that the disclosing organization provide patients, upon request, a list entities to which their information has been disclosed.

A commenter proposed that § 2.31(a)(4) be revised to allow a general designation to be used whenever there is a "treating provider relationship" or a "care management relationship." The commenter stated the "care management relationship" should be defined to include the concepts of assistance in obtaining appropriate care, care coordination, and assistance in the implementation of a plan of medical care.

A couple of commenters suggested SAMHSA revise proposed § 2.31(a)(4)(iv)(C) to read: ". . . to a participant(s) who has a treating provider relationship with the patient at the time the disclosure is made." (Note, the relevant text is now found at § 2.31(a)(4)(iii)(B)(3) due to renumbering of the final regulation.) The commenters stated this would make it clear that participants who develop a treatment relationship with the patient after the date the consent can gain access.

Commenters recommended that the general authorization mirror the authorization under HIPAA to ease the transition and reduce compliance issues.

A commenter recommended SAMHSA work with other federal entities that are exploring parity enforcement to ensure that the proposed rule changes would not create barriers for states working on enforcement of the parity law.

If a patient notes their information may be shared with current and future health care providers, one commenter said the specific name of the ACO or other provider should not be required.

SAMHSA Response

SAMHSA declines to explicitly recognize and include health plan care services, such as managed care, care coordination, case management and other integrated care activities as part of the required elements for written consent for entities that do not have a treating provider relationship with the patient under proposed § 2.31(a)(4)(iv), or broaden the “treating provider relationship” to also include a “care management relationship.” The definition of “Treating provider relationship” is sufficiently broad to cover the necessary components of a patient’s care team.

A commenter stated any privacy concerns could be fixed by requiring (1) a general designation of a class of participants with a treating provider relationship; and (2) that the disclosing organization provide patients, upon request, a list of entities to which their information has been disclosed. Another commenter wanted to delete the requirement of naming the entity without a treating provider relationship with the patient whose information is being disclosed. SAMHSA is retaining the consent requirements discussed in this section of the preamble because we believe it balances increased flexibility with necessary privacy protections.

SAMHSA declines to mirror the authorization under HIPAA to ease the transition and reduce compliance issues, as a commenter suggested, because, due to its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA.

SAMHSA may, after publication of this final rule, provide further subregulatory guidance on specific concerns, such as states working on enforcement of the parity law.

Public Comments

Several commenters recommended splitting proposed § 2.31(a)(4)(iv) into two sections. The first would contain special provisions governing disclosures made through HIEs and would retain the references to “individual participants” and “entity participants.” The second would cover all entities that do not fall into any of the other categories in proposed paragraph (a)(4)(iv); in these cases, the specific entity to which disclosure is made would have to be specified.

SAMHSA Response

SAMHSA proposed § 2.31(a)(4)(iv) to apply to an entity (1) that does not have a treating provider relationship with the patient whose information is being disclosed, and (2) is not a third-party payer. Therefore, SAMHSA declines to make the recommended changes. We note, however, that due to re-numbering the proposed § 2.31(a)(4)(iv) provision is found in the final regulation at § 2.31(a)(4)(iii)(B).

Public Comments

A commenter recommended that the use of multi-party consents be permissible even when the “To Whom” section contains a general designation, and that the party(ies) named in the “To Whom” section be permitted to re-disclose patient information if the patient has consented to such re-disclosures in order to allow patients’ treating providers to communicate with each other (pursuant to patient consent) within networks like HIE and integrated care organizations. Another commenter stated that the general designation is a step in the right direction but the proposed rule would add a burdensome accounting, which is not required for disclosures pursuant to a valid authorization under HIPAA.

SAMHSA Response

On the issue of multi-party consent, a multi-party consent can be achieved by allowing for bi-directional communication using the general designation in both the “To Whom” and “From Whom” sections of the consent. It can also be created by naming multiple individuals with or without a treating provider relationship with the patient whose information is being disclosed or entities with a treating provider relationship with the patient whose information is being disclosed in the “To Whom” and “From Whom” sections of the consent. The key is to make sure the consent form authorizes each party to disclose to the other ones the information specified and for the purpose specified, in the consent. The “To Whom” and “From Whom” sections of the consent provisions of the final rule will permit multi-party consents.

With respect to the comment regarding the additional burden of the List of Disclosures associated with the use of a general designation on the consent form, SAMHSA addressed this issue in Section F.3, in the preamble discussion of Confidentiality Restrictions and Safeguards (§ 2.3). That discussion emphasizes the fact that there is no timeframe in which part 2

programs and lawful holders need to comply with the List of Disclosures systems requirements; the final rule only requires that if they choose to disclose information pursuant to a general designation on the “To Whom” part of the consent form, they must also be capable of providing a List of Disclosures upon request per § 2.13(d).

e. Proposed Alternative Approach for “To Whom” Section

SAMHSA is not finalizing the alternative approach to the “To Whom” consent provision. In the NPRM, SAMHSA proposed an alternative approach for the “To Whom” aspect of a consent form that attempted to reflect the same policy goal as the proposed regulation text while attempting to simplify the language that would appear on the consent form. This alternative approach would not change the existing language in the “To Whom” section of the consent form. Under this alternative approach, SAMHSA proposed to add a definition of “organization” to § 2.11. Organization would mean, for purposes of § 2.31, (a) an organization that is a treating provider of the patient whose information is being disclosed; or (b) an organization that is a third-party payer that requires patient identifying information for the purpose of reimbursement for services rendered to the patient by a part 2 program; or (c) an organization that is not a treating provider of the patient whose information is being disclosed but that serves as an intermediary in implementing the patient’s consent by providing patient identifying information to its members or participants that have a treating provider relationship, as defined in § 2.11, or as otherwise specified by the patient.

Public Comments

No commenters expressed support for the proposed rule’s alternative approach to required elements as stated. One commenter said the alternative approach would impose fewer burdens on patients and part 2 entities but did not agree with the restriction on dissemination to only treating entities. Another commenter supported the proposed alternative if it results in only the name of the HIE and not its participants being listed on the consent form.

Several commenters expressed general opposition to the proposed alternative approach. One commenter stated that redefining “organization” to make it more expansive would lead to erosion of trust and would have a chilling effect on the communications

necessary for effective treatment. Another commenter stated that a more expansive definition of “organization” may defeat a patient’s intent because a patient would have less notice that their information could be disclosed to an entity not specifically named on the consent form.

SAMHSA Response

Based on the comments, SAMHSA has not adopted the alternate approach. Although a few commenters supported the adoption of the broad definition of “organization,” none provided sufficient information to determine how that definition could be implemented to protect the patient’s information from disclosure to parties without a need to know. It is also unclear how the List of Disclosures requirement would be applied under a broader definition of “organization.” SAMHSA, therefore, has not adopted a definition of “organization.” SAMHSA disagrees with the recommendation that disclosure to a wider range of entities should be allowed without the patient’s specific consent.

3. Amount and Kind

SAMHSA is adopting this aspect of the proposal. SAMHSA has moved the former § 2.31(a)(5), “Amount and Kind” provision, to § 2.31(a)(3) and revised the provision to require the consent form to explicitly describe the substance use disorder-related information to be disclosed. The designation of the “Amount and Kind” of information to be disclosed must have sufficient specificity to allow the disclosing program or other entity to comply with the request.

a. General

Public Comments

Many commenters provided feedback on the proposed rule’s “Amount and Kind” requirements on a patient’s consent form. A few commenters generally supported the provision. However, several commenters generally disagreed with the proposed provision because it would either decrease or fail to improve the sharing of patient information; would hamper integrated care; would result in consent forms routinely becoming outdated; patients should not decide what information is disclosed; and the current (1987) rule language is adequate for protection of patient privacy.

Some commenters said the rule should continue to allow a general description of the type of information being disclosed. Other commenters asked SAMHSA to clarify why the revision of the regulatory language was

necessary and why specific information is preferable to simply stating that the consent form covers all the records maintained by the part 2 program.

SAMHSA Response

The designation of the “Amount and Kind” of information to be disclosed must explicitly describe the substance use disorder-related information to be disclosed and have sufficient specificity to allow the disclosing program or other entity to comply with the request. However, the entity creating the consent form may provide options by including free text space, or choices based on a generally accepted architecture (e.g. the Consolidated-Clinical Document Architecture (C-CDA)), or document (e.g. the Summary of Care Record as defined by CMS for the EHR Incentive Programs). It is permissible to include “all my substance use disorder information” as long as more granular options are also included.

Nothing in the rule would prevent the development and use of broad categories of the substance use disorder-related information on the Amount and Kind section of the consent form. The types of information that might be requested include diagnostic information, medications and dosages, lab tests, allergies, substance use history summaries, trauma history summary, elements of a medical record such as clinical notes and discharge summary, employment information, living situation and social supports, and claims/encounter data. If options are provided, it is also permissible to provide check boxes next to each option.

b. Impact of the Amount and Kind Requirement on Providers and Patients

Public Comments

Commenters expressed concern that the proposed “Amount and Kind” provision would be unduly burdensome for providers, thus obstructing communications. Several commenters stated that the proposed rule would require both patients and providers to have an in-depth understanding of the precise terms used for substance use disorder information. Some commenters thought this would put undue burden on patients. Other commenters argued that the “Amount and Kind” requirement would place an additional burden on patients to anticipate future care and/or continually update their consent forms. Similarly, commenters stated that patients do not know what information is necessary to support their treatment, which could lead to important information being omitted.

Commenters argued that the “Amount and Kind” provision would require requesting health providers to know the format, titling, and nomenclature used for substance use disorder information in the part 2 program.

A commenter argued that many patients would want all of their substance use disorder information disclosed if it would improve the quality and coordination of their care. Many commenters recommended that patients should be able to sign a consent to sharing their entire record (i.e., a global consent), with some arguing that the form should include a statement that covers “all my records,” “all my substance abuse records,” “entire record” and/or “full record.” Other commenters said patients should be able to choose via a check box “substance abuse treatment information” or authorize the entire medical record and list what cannot be disclosed. Several commenters stated that an exhaustive list of check boxes on the consent form would be confusing for many patients.

Some commenters said patients should be able to designate an option for overall record release with an option for further specification of dates and materials to be released from the substance use disorder record. However, another commenter said selections should be “all or nothing” to enable providers to exchange information with HIE, ACO, CCO or a similar entity according to the patient’s consent directive with other providers.

SAMHSA Response

The patient will be aware that they have substance use disorder information and can make a determination whether they want that information disclosed. The 1987 final rule part 2 regulations require the patient to list “how much and what kind of information is to be disclosed” (§ 2.31(a)(5)). SAMHSA has revised the provision to require that the consent form explicitly describe the substance use disorder information to be disclosed to ensure patients understand they are disclosing the specified substance use disorder information. The amount of specificity patients wish to include in the “Amount and Kind” section of the consent form is left to them, as long as it has sufficient specificity to allow the disclosing program or other entity to comply with the request. As such, this section does not prohibit a patient from listing “all my substance use disorder information” or “none of my substance use disorder information.” However, the Amount and Kind section of a consent form must accommodate more specific options. As stated previously, nothing in the rule

would prohibit the inclusion on a consent form of broad categories of the substance use disorder-related information that would generally appear in patient records to assist patients in identifying the information they wish to disclose. In developing broad categories of information to be included on the consent form, part 2 programs and other lawful holders of patient identifying information would need to take into consideration reading level standards and the concepts of plain language. The rule does not require further consent when new information is added to the substance use disorder record if the new information is covered by the “Amount and Kind” section on the consent form. If the “Amount and Kind” section does include specificity that the patient doesn’t understand, the party obtaining the consent should explain it to the patient. SAMHSA may, after publication of this final rule, issue in subregulatory guidance information for educating staff and patients. We are reliant on the provider to be clear to patient, which has always been the case.

c. Required Substance Use Disorder Information on Consent Forms

Public Comments

Some commenters said the level of detail required in the “Amount and Kind” section of the consent form was unrealistic, unnecessary, and confusing. A commenter argued that the level of detail required by the rule was at odds with the general designations necessary for information exchange. A commenter stated that EHR infrastructure may not be able to categorize and segregate information as described in proposed § 2.31(a)(3).

Some commenters urged SAMHSA to simplify or otherwise revise this section of the consent form. A commenter recommended that the list could be simplified by including standardized fields on the consent form that align with information commonly found on a Continuity of Care Document (CCD). Commenters recommended narrowing the list to several broad categories (e.g. employment information, living situation, social supports). A commenter stated that if more specific categories were needed, the patient could write in their own terms. Some commenters said the elements and extent of the consent should be the same under part 2 as it is in HIPAA. Other commenters said SAMHSA should use the required elements of a Summary of Care Record as defined by CMS for the EHR Incentive Program as a basis for the “kind” and “type” of information able to be disclosed. Another commenter

said SAMHSA should defer to the expertise of health plans to determine what is necessary for a treating provider to know about substance use disorder.

SAMHSA Response

The types of information that might be requested include diagnostic information, medications and dosages, lab tests, allergies, substance use history summaries, trauma history summary, employment information, living situation and social supports, and claims/encounter data. However, the entity creating the consent form may provide options to include free text space, or choices based on a generally accepted architecture or document such as the C-CDA, or Summary of Care Record, as defined by CMS for the EHR Incentive Program. It is permissible to include “all my substance use disorder information” as long as more granular options are also included. If options are provided, it is also permissible to provide check boxes next to each option. The designation of the “Amount and Kind” of information to be disclosed must have sufficient specificity to allow the disclosing program or other entity to comply with the request.

d. Requests for Clarification

Public Comments

A couple of commenters asked SAMHSA to clarify whether the “Amount and Kind” section is to inform the patient or the providers. A commenter requested clarification on whether multiple patient consents would be necessary when the contents of a record changes over time. Some commenters requested that SAMHSA provide more specific examples of adequate descriptions of the type of information being disclosed. Another commenter recommended SAMHSA create a sample consent form.

SAMHSA Response

The “amount and kind” section informs both the patient and the providers. It allows patients the opportunity to specify whether all of their substance use disorder treatment information or only some may be disclosed and sets the limits on what a part 2 program or other lawful holders may disclose. The amount and kind section will generally cover classes of information so that changes to the record should not trigger the need for re-consents for the same classes of information. SAMHSA may provide examples or a sample consent form in subregulatory guidance following the publication of the final rule.

4. From Whom

SAMHSA is not finalizing the substantive changes that were proposed for the “From Whom” provision in § 2.31(a)(2). In the NPRM, SAMHSA proposed to move the 1987 § 2.31(a)(1) “From Whom” language of the consent requirements provision to § 2.31(a)(2). In addition, because SAMHSA was also proposing, in certain instances, to permit a general designation in the “To Whom” section of the consent form, SAMHSA proposed to require the “From Whom” section of the consent form to specifically name the part 2 program(s) or other lawful holder(s) of the patient identifying information permitted to make the disclosure.

Public Comments

SAMHSA received comments on the “From Whom” section of the consent form from a group of commenters representing a broad spectrum of stakeholder organizations. The overwhelming majority of these commenters were opposed to the proposed change and many suggested withdrawing the proposal in § 2.31(a)(2) and retaining the 1987 “From Whom” language (§ 2.31(a)(1)).

Commenters expressed concern that the proposed § 2.31(a)(2) could decrease the sharing of health information; would add complexity with little or no benefit to patient privacy; would unnecessarily limit the use of a consent; and may accidentally cause the patient to omit a provider whom they want or need to see their data; would negatively impact certain HIE models. A significant majority of the comments regarding the “From Whom” section of the consent form voiced strong opposition to the proposal. A few commenters said the proposed change would unnecessarily limit the positive step SAMHSA took in permitting, in certain circumstance, a general designation in the “To Whom” section of the consent form. One commenter suggested revising the requirements on the basis that the proposed changes do not modernize the regulation.

SAMHSA Response

SAMHSA was persuaded by the overwhelming opposition to the proposed “From Whom” language and, with the exception of minor technical revisions, will retain in this final rule the language in the current (1987) regulation. SAMHSA made this decision for several reasons. First, the existing “From Whom” requirements have been in effect for nearly 30 years and were based on the Department’s prior determination that, even with a general

designation option, the provision did not jeopardize patient privacy. The fact that SAMHSA is not aware of any reports of the current (1987) "From Whom" requirement resulting in unintended consequences further supports this position.

Second, in the NPRM, SAMHSA supported the elimination of the general designation option in the "From Whom" section of the consent form based on concerns that "[t]he patient may be unaware of possible permutations of combining the two broad designations (*i.e.*, in the "To Whom" and "From Whom" sections) to which they are consenting, especially if these designations include future unnamed treating providers." Based on the comments received, we believe this concern may have been overstated. Commenters generally did not agree that the "unintended consequences" the NPRM postulated were likely to occur. Commenters also asserted that SAMHSA's proposal shifted the burden from the receiver to the sender of health information and would be burdensome both to providers and patients. In addition, the proposed change could undermine new models to streamline consent.

While the option of using a general designation in either the "To Whom" or the "From Whom" sections (or both) provides the patient greater flexibility, and may result in two broad designations, it is still ultimately the patient's decision whether to use these options or to specifically name both the disclosing and receiving parties on the consent form. We agree with the remarks of one commenter that the proposed change to the "From Whom" section potentially undermines, rather than supports, patient choice, which was not SAMHSA's intent. Another commenter suggested that SAMHSA's proposed revisions may restrict multi-party consents and disclosures, such as consents that authorize disclosures "between and among" the parties. These types of consents are an important option for part 2 programs and patients, which SAMHSA believes would be eliminated if it were to finalize the proposal articulated in the NPRM. Another characterized the proposed change as adding greater complexity to the consent process for patients with little or no benefit to patient privacy.

Third, leaving the 1987 "From Whom" section essentially unchanged may reduce the burden on providers and IT vendors to accommodate this final regulation. HIE consortiums/associations and state governments were particularly concerned about the impact of the proposed revisions on consent-to-

access HIE models (sometimes referred to as a community-wide consent-to-access model). As several commenters said, the only way for the participant to comply with the NPRM "From Whom" requirement would be for the participant to list the name of every part 2 program in the relevant state in the "From Whom" section of the consent form in order to inform the patient that there is a possibility that one of these programs might be the source of the information being accessed. Not only would this require the listing of hundreds of providers on the face of a consent form—effectively transforming the document into a provider directory—but it would also require the listing of part 2 programs that are not participating in the HIE, which would be misleading and likely draw objections from these programs.

Moreover, the identities of part 2 programs that may be sources of information are constantly changing as new programs are licensed or join the HIE. This would mean that every time a participant sought to access a patient's information in an HIE, it would have to provide the patient with a consent form listing all of these new providers, and the participant would constantly need to print new forms with updated lists of part 2 programs in the state. This would even apply in the vast majority of cases where no part 2 information would be exchanged, since a participant in a consent-to-access model often does not know whether the sought-after information contains part 2 information and, therefore, needs to assume that it does. Requiring participants to print lengthy consent forms with an updated list of part 2 programs every time a new part 2 program is licensed in the relevant state (and developing a system to inform every participant about such updates) is simply not feasible. The community consent-to-access model was implemented specifically in order to meet the spirit and letter of the 1987 part 2 regulations. In addition, federal and state governments have invested hundreds of millions of dollars to build statewide health information networks in reliance on the 1987 part 2 regulations, which allow consent forms to have a general designation of "From Whom" the records are being disclosed. Theoretically, it is possible for part 2 programs to switch to a consent-to-disclose model while all other participants continue to operate under a consent-to-access model.

Fourth, the flexibility provided in the "To Whom" and "From Whom" sections of the consent form are balanced by the specificity in the "Amount and Kind" and "Purpose"

sections of the consent form. SAMHSA has revised the "Amount and Kind" element on the consent form to require the consent form to explicitly describe the substance use disorder-related information to be disclosed so that patients will be aware of the substance use disorder information they are authorizing to disclose when they sign the consent form. In addition, under the current (1987) regulation, consent forms are required to include the purpose of the disclosure. Any disclosure made under these regulations must be limited to that information which is necessary to carry out the purpose of the disclosure.

5. New Requirements

SAMHSA is modifying this aspect of the proposal. SAMHSA proposed to add two new requirements related to the patient's signing of the consent form. First, SAMHSA proposed a provision that would have required the part 2 program or other lawful holder of patient identifying information to include a statement on the consent form that the patient understands the terms of their consent. For the reasons explained below, SAMHSA is not incorporating this requirement into § 2.31 in this final rule. Second, SAMHSA revised § 2.31 to require the part 2 program or other lawful holder of patient identifying information to include a statement on the consent form that the patient understands their right, pursuant to § 2.13(d), to request and be provided a list of entities to which their information has been disclosed when the patient includes a general designation on the consent form. SAMHSA is including this requirement in the final rule (*see* § 2.31(a)(4)(iii)(B)(3)(i)).

Public Comments

A few commenters supported the additional statement clarifying that the patient understands the terms of consent and their rights. One commenter suggested expanding the statement to include language about the potential consequences of utilizing a general designation in the "To Whom" and "From Whom" fields, which would address concerns about the use of two general designations, while preserving the flexibility allowed in the "From Whom" section of the current (1987) regulation.

However, other commenters opposed updating the consent requirements because doing so would require providers to update consent forms or would require a separate substance use disorder consent form. Several commenters questioned the purpose of

the additional signed statement. A commenter criticized the proposed language and argued that it was an attempt to avoid liability.

Several commenters argued that patients would not have the capacity to understand what they are signing. Furthermore, another commenter stated that a signed statement saying that the patient has read the terms of the consent does not mean the patient actually read and understood the consent. A commenter recommended a provision to allow the treating physician to sign a consent for substance use disorder records for patients who may lack the cognitive ability to sign a waiver.

SAMHSA Response

SAMHSA agrees with the commenters that the requirement that the part 2 program or other lawful holder of patient identifying information must include a statement on the consent form that the patient understands the terms of their consent is unnecessary. As commenters stated, a signature on a confirmation statement does not assure that the patient has, in fact, read or understood it. It is also the case, as commenters stated, that some patients may not have the capacity, at the time they are admitted, to provide an informed consent. Therefore, SAMHSA has eliminated this requirement.

K. Prohibition on Re-Disclosure (§ 2.32)

SAMHSA is adopting this section as proposed except for a clarifying revision to § 2.32(a). As discussed in the NPRM preamble, the prohibition on re-disclosure provision only applies to information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder and allows other health-related information shared by the part 2 program to be re-disclosed, if permissible under the applicable law. SAMHSA also clarified in the NPRM preamble that, if data provenance (the historical record of the data and its origins) reveals information that would identify, directly or indirectly, an individual as having or having had a substance use disorder, the information is prohibited from being re-disclosed. In addition, SAMHSA revised § 2.32 to clarify that the federal rules restrict any use of the information to criminally investigate or prosecute any patient with a substance use disorder, except as provided in §§ 2.12(c)(5) and 2.65.

1. General

Public Comments

Several commenters generally supported the prohibition on re-

disclosure, with some stating that the prohibition ensured the confidentiality of the patient's information and would facilitate broader sharing of information among providers and programs in support of integrated care, thus increasing quality of care. A commenter supported the delineation between substance use disorder data and other health-related data, particularly the flexibility to share portions of a patient's record that do not fall under part 2 requirements. Another commenter supported application of the prohibition on re-disclosure to individuals or entities that receive confidential identifying information from lawful holders.

However, many commenters generally disagreed with the prohibition on re-disclosure. Commenters argued that the prohibition created unnecessary barriers and challenges for health care providers and would jeopardize patient treatment and care coordination (e.g., due to over-restriction of medical records). One commenter argued that the prohibition would prevent the inclusion of substance use disorder treatment information within HIE, ACOs, CCOs, and research institutions. Another commenter stated the prohibition would prevent substance use disorder treatment clinics from being incorporated into integrated care networks. A commenter said the prohibition on re-disclosure would prohibit providers or payers from correcting or supplementing knowledge of another provider based on fear of violating the law. Lastly, a commenter said the proposed rules prohibition on re-disclosure was not different from the current (1987) regulation and therefore no clarification was necessary.

SAMHSA Response

SAMHSA is adopting § 2.32 as proposed except for a minor clarification in § 2.32(a). As discussed elsewhere in this final rule, SAMHSA is attempting to balance the facilitation of information exchange within new health care models that promote integrated care with the continued need for confidentiality protections that encourage patients to seek treatment without fear of compromising their privacy. SAMHSA acknowledges the legitimate concerns of commenters regarding how care coordination relates to patient safety. However, SAMHSA must consider the intent of the governing statute (42 U.S.C. 290dd-2), which is to protect the confidentiality of substance use disorder patient records. SAMHSA believes that the prohibition on the re-disclosure of information that would identify, directly or indirectly, an

individual as having been diagnosed, treated, or referred for treatment for a substance use disorder comports with its statutory mandate. SAMHSA notes that the revisions to § 2.32 clarify that the prohibition on re-disclosure only applies to information that would identify an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, but does not apply to health information unrelated to the substance use disorder, such as treatment for an unrelated health condition. These revisions should minimize decisions by part 2 programs to protect an entire patient record.

Public Comments

Several commenters argued that the original statute for the substance use disorder regulations did not prohibit re-disclosure. Another commenter argued that HIPAA did not exist when the original regulations regarding substance use disorder data were promulgated and that the re-disclosure prohibition was not needed in today's legal environment. Another commenter stated that the re-disclosure prohibition is at odds with the goals of The Mental Health Parity and Addiction Equity Act and the Affordable Care Act.

SAMHSA Response

While the statute may not be explicit with regard to certain provisions in 42 CFR part 2, the statute directs the Secretary to prescribe regulations to carry out the purpose of the statute, which may include definitions and may provide for such safeguards and procedures that in the judgment of the Secretary are necessary or proper to effectuate the purposes of this section, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

Because 42 CFR part 2 and its governing statute are separate and distinct from HIPAA and due to its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA. However, SAMHSA aligned policy with HIPAA where possible.

SAMHSA strives to facilitate information exchange within new health care models while addressing the legitimate privacy concerns of patients seeking treatment for a substance use disorder. These concerns include: The potential for loss of employment, loss of housing, loss of child custody, discrimination by medical professionals and insurers, arrest, prosecution, and incarceration.

2. Impact of Re-Disclosure Prohibition on Patient Privacy and Patient Choice Public Comments

Several commenters expressed concerns that the prohibition on re-disclosure did not improve patient privacy protections. A commenter stated that the proposed changes allowed more disclosures without patient notice, undermining the goal of protecting a patient's privacy. A commenter argued that any information given by a substance use disorder treatment program, including a refusal to provide information, could identify an individual as having a substance use disorder (whether or not the patient actually does) or having received treatment for a substance use disorder. Another commenter argued against expanding the scope of part 2 to non-substance use disorder conditions which may unfairly suggest the presence of a substance use disorder.

Several commenters expressed concern that the prohibition on re-disclosure interfered with a patient's choice on whether to disclose their medical record. Commenters argued that the prohibition on re-disclosure imposed an unnecessary burden on substance use disorder patients who wish to have the same level of quality coordinated care as other patients. Several commenters expressed concern that the prohibition on re-disclosure required patients to anticipate future care. Several commenters argued that a patient should be allowed to consent to or otherwise control the re-disclosure of their information.

SAMHSA Response

Patients may permit re-disclosures of their information via written consent. Part 2-compliant consent forms can authorize an exchange of information between multiple parties named in the consent form. The key is to make sure the consent form authorizes each party to disclose to the other ones the information specified and for the purpose specified, in the consent. In addition, the revised consent requirements allow patients, under certain circumstances, to authorize disclosure of their information via a general designation (e.g., to "all my current and future treating providers") rather than to specifically name each recipient.

As SAMHSA has stated in this regulation, the "To Whom" section of the consent form can authorize a disclosure of patient identifying information to an entity that does not have a treating provider relationship with the patient whose information is

being disclosed and acts as an intermediary for its participants, such as an HIO, and a general designation of individual and entities with a treating provider relationship with the patient whose information is being disclosed that are participants. The required statement prohibiting re-disclosure should accompany the information disclosed through consent along with a copy of the part 2-compliant consent form (or the pertinent information on the consent form necessary for the intermediary to comply with the signed consent), so that each subsequent recipient of that information is notified of the prohibition on re-disclosure.

3. Disclosure of Information that May Indicate a Substance Use Disorder Public Comments

Several commenters argued that determining which conditions and medications would "identify a patient as having or having had a substance abuse disorder" would be a burden on providers. Commenters said most staff within an HIE do not have the qualifications (e.g., clinical knowledge regarding medical conditions and medications) to distinguish which information could indicate an individual's substance use disorder and would thus need to be trained accordingly. Commenters stressed that the difficulty in determining what patient information would indicate a patient had a substance use disorder would discourage providers and health plans from exchanging information, further inhibiting coordinated care and enforcing differential treatment of individuals with substance use disorders.

Several commenters expressed concern that the language of the proposed rule was too broad. A commenter said the provision was problematic because many medications are frequently related to substance use disorder or other physical or mental conditions, so there is a risk of indicating a patient had a substance use disorder whether or not the patient actually did have a substance use disorder. Similarly, commenters argued that preventing disclosure of information that suggests a substance use disorder is too broad and would overly restrict the information available to health care providers, thus endangering patient safety. A commenter recommended that SAMHSA interpret "identifies a patient as having or having had a substance use disorder" to mean only information that actually identifies a patient as having a substance use disorder, rather than

including information that merely suggests that a person might have an substance use disorder. A commenter recommended that the provision be interpreted as written in the rule language, not as expansively considered in the NPRM preamble.

One commenter argued that a prescription for a certain drug is not enough to identify a person as having a substance use disorder, let alone indicate the person is receiving care from a substance use disorder program. The commenter stated that this ambiguity is sufficient to be able to say that the information does not "identify" the person as having a substance use disorder or, moreover, that they are being treated in a program.

A commenter stated that, when the data sharing of the records are redacted to remove all evidence of substance use disorder they become worthless in terms of ensuring improved client care. Further, this commenter said that there is no way to ensure such redaction would be done effectively and that there is a high risk of inadvertent disclosure, which cannot be made private again.

SAMHSA Response

Comments received by SAMHSA suggest that the discussion in the NPRM of re-disclosure regarding medications and examples provided were not clear. Both the proposed rule and this final rule prohibit re-disclosure of part 2 information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, such as indicated through standard medical codes, descriptive language, or both, unless further disclosure is expressly permitted by the written consent of the individual whose information is being disclosed or is otherwise permitted by the part 2 statute or regulations. Such information could, in some circumstances, include part 2 information concerning a patient's prescription for a medication typically used for medication-assisted treatment or a disease or condition frequently associated with substance use disorders. While certain medical information in and of itself may not identify a patient as having a substance use disorder and approved medications may be used for various purposes, the context of this preamble and § 2.32 concerns the re-disclosure of information that is directly related to the patient's undergoing treatment for substance use disorders. Therefore, it is considerably more likely that the re-disclosure of such information would result in identifying the patient as receiving treatment for a substance use disorder. By contrast, a

patient who is not receiving such treatment (and, therefore, whose health information is not covered by this rule) would not face such risks even if their medication or condition is frequently associated with substance use disorders. It is also important to note that in some cases, patients may expressly consent to further re-disclosure and that such re-disclosure may in some cases be allowed under other provisions of this rule. SAMHSA understands that this is an important topic and may provide additional subregulatory guidance on this issue after the publication of this final rule.

4. Technical Challenges in Preventing Unauthorized Re-Disclosure Public Comments

Commenters expressed concern that, due to how information is exchanged electronically, it may be technically difficult for the medical industry to prevent re-disclosure. Commenters argued that providers do not have the technical ability to segregate substance use disorder content and redact that information from being sent to new providers who use or review the record. More specifically, a commenter argued that EHR currently have the ability to contribute patient data to an HIE or a Regional Health Information Organization (RHIO) at the patient level, not at the services rendered level. A commenter stated that this capability was five to ten years away. A commenter argued that if the outputs of the DS4P's pilots were refined and required under the federal health IT certification program, there would have been solution for the re-disclosure of substance use disorder information.

Several commenters expressed concern about the lack of technical standards. A commenter recommended that SAMHSA adopt clear technical methods and standards for recipients of disclosures, by which part 2 providers and programs would be able to identify which records are not part 2 sensitive and can be incorporated directly into recipient's EHR. Similarly, a commenter stated there needed to be standards for all EHR Vendors and HIEs to address the re-disclosure prohibition.

Some commenters expressed concern about the burden of upgrading their record system to comply with the prohibition on re-disclosure. Commenters stated that the re-disclosure prohibition would require upgrades and modifications to EHR and HIEs. A commenter stated that SAMHSA should provide funding to upgrade HIE systems or HIEs would be

likely to refuse to accept substance use disorder data.

Many commenters said the prohibition on re-disclosure and the technical limitations many providers faced in preventing re-disclosure would have adverse impacts on sharing of information and patient care. A commenter stated that, due to the technical limitations, some providers would continue to prohibit re-disclosure of the patient's entire medical record. Other commenters argued that the technical limitations would result in substance use disorder information being kept out of the electronic health care environment, leaving gaps that could contribute to poor patient outcomes. A commenter stated that part 2 programs would be unable to participate in integrated care delivery models because their system was not equipped to segregate substance use disorder data.

A commenter stated that SAMHSA should encourage the expansion of meaningful use to allow behavioral health care providers to adopt data segmentation technology. A commenter stated that, in light of the EHR requirements under meaningful use, SAMHSA should consider ways to reduce the burden on entities using EHR with respect to disclosure statements under § 2.32. Another commenter argued that SAMHSA should simply issue consent recommendations and incorporate more complex structures, such as data segmentation, in a broader mandate or on other requirements in order to allow sufficient time for implementation.

SAMHSA Response

SAMHSA actively supports the continued development of data standards to support the integration of substance use disorder treatment in emerging health care models. The Data Segmentation for Privacy (DS4P) initiative within ONC's Standards and Interoperability (S&I) Framework facilitated the development of standards to improve the interoperability of EHRs containing sensitive information that must be protected to a greater degree than other health information due to 42 CFR part 2 and similar state laws. The DS4P standard allows a provider to tag a C-DA document with privacy metadata that expresses the data classification and possible re-disclosure restrictions placed on the data by applicable law. This aids in the electronic exchange of sensitive health information. In October 2015, ONC adopted the DS4P standard as part of the 2015 Edition health IT certification criteria. The DS4P certification criteria

require health IT to demonstrate the ability to send and receive summary care records that are document-level tagged. SAMHSA will continue to work with ONC to further refine the DS4P standard so that it can be applied to segment data at the data element level in the manner described in ONC's "Connecting Health and Care for the Nation: A Shared Nationwide Interoperability Roadmap—Version 1.0 Final (Roadmap)," ² and to accelerate the adopting of the DS4P send and receive standards.

Regarding re-disclosure, the primary advantage of continuing the prohibition on re-disclosure by recipients of a disclosure with patient consent is that it assures a greater measure of confidentiality for patient identifying information. SAMHSA strives to facilitate information exchange within new health care models while addressing the legitimate privacy concerns of patients seeking treatment for a substance use disorder. These concerns include: The potential for loss of employment, loss of housing, loss of child custody, discrimination by medical professionals and insurers, arrest, prosecution, and incarceration.

The prohibition on re-disclosure predates this rulemaking and providers were already required to comply with the existing provision. SAMHSA proposed only minor changes to the provision for clarity, which should not necessitate system upgrades. Therefore, SAMHSA declines to respond to comments regarding the burdens of system upgrades to comply with the prohibition on re-disclosure.

Finally, SAMHSA works closely with its federal colleagues to improve the integration of substance use disorder treatment providers and their data. Although the part 2 authorizing statute does not give SAMHSA authority to mandate data segmentation, as noted above, DS4P was included in the ONC 2015 Edition Health IT Certification Criteria (2015 Edition). SAMHSA has also supported the development of the application branded Consent2Share, an open-source health IT solution based on DS4P which assists in consent management and data segmentation and will continue to work to improve the granularity of how the DS4P standard operates.

5. Requests for Clarification of the Re-Disclosure Prohibition

Public Comments

Commenters requested clarification on various aspects of the re-disclosure prohibition. Some commenters asked for clarification on what records were subject to the re-disclosure prohibition (e.g., the actual record, or the part 2-compliant record that is now incorporated into the physician's notes at the receiving institution). The commenters requested examples of how data may, or may not, be disclosed after lawful receipt of part 2 data.

A commenter suggested that SAMHSA confirm that only records that originated at a part 2 program are subject to the prohibition on re-disclosure.

SAMHSA Response

Once patient identifying information has been initially disclosed (with or without patient consent), no re-disclosure is permitted without the patient's express consent to re-disclose or unless otherwise permitted by the part 2 statute or regulations. Only disclosure of patient identifying information made with the patient's written consent must be accompanied by a written notice regarding the part 2 prohibition on re-disclosure. Although there is no requirement to provide such written notice to individuals and entities who receive information through other means under the part 2 program, all lawful holders must comply with the part 2 program requirements, including, but not limited to the limitations on re-disclosure.

Regarding requested confirmation that only records originated at a part 2 program are subject to the prohibition on re-disclosure, SAMHSA clarifies that individuals and entities that are not covered by part 2 that possess substance use disorder data that did not originate in a part 2-covered provider are not subject to the part 2 program requirements. However, if those individuals and entities received that information that is subject to part 2 via patient consent (with or without the notice of prohibition on re-disclosure) or through any other means under the part 2 program (i.e., through means that made them a lawful holder), they would be required to comply with part 2.

Public Comments

Several commenters asked for clarification with regard to disclosing prescription medications. A few commenters asked whether prescription medications could be disclosed without consent if the prescriber states that the

prescription is not for substance use disorder treatment. Another commenter asked what the requirements were for medications that are used "off label" to treat substance use disorder and medications that treat withdrawal. A commenter asked for clarification on whether providers in part 2 programs, who do not reveal their part 2 program affiliation, would be prohibited from disclosing information about substance use disorder prescriptions that are also prescribed for non-substance use disorder purposes, unless the patient has consented to the disclosure.

SAMHSA Response

SAMHSA agrees that part 2 would permit the disclosure of information without patient consent relative to a medication that is used for both substance use disorder and non-substance use disorder purposes, even when it is being prescribed for the purpose of substance use disorder treatment. In disclosing the information, both the provider and the data provenance must not identify the provider as being affiliated with a part 2 program or prescribing the substance use disorder medication for substance use disorder treatment.

Public Comments

Regarding the prohibition on re-disclosure, a commenter requested that SAMHSA provide clarification on what impact a court order has on sharing information otherwise deemed confidential under the part 2 regulations.

SAMHSA Response

SAMHSA has previously stated in FAQ guidance concerning re-disclosures that when information is disclosed pursuant to an authorizing court order, part 2 requires that steps be taken to protect patient confidentiality. In a civil case, part 2 requires that the court order authorizing a disclosure include measures necessary to limit disclosure for the patient's protection, which could include sealing from public scrutiny the record of any proceeding for which disclosure of a patient's record has been ordered [42 CFR 2.64(e)(3)]. In a criminal case, such order must limit disclosure to those law enforcement and prosecutorial officials who are responsible for or are conducting the investigation or prosecution, and must limit their use of the record to cases involving extremely serious crimes or suspected crimes [42 CFR § 2.65(e)(2)].

Public Comments

A commenter asked how a mixed-use mental health and substance use

treatment facility should handle re-disclosure and how SBIRT would be addressed under this section.

SAMHSA Response

Only the substance use disorder information is covered by part 2. The mental health information is not. The prohibition on re-disclosure only applies to information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, such as indicated through standard medical codes, descriptive language, or both, and allows other health-related information shared by the part 2 program to be re-disclosed, if permissible under other applicable laws.

6. Recommendations To Improve the Prohibition on Re-Disclosure

Public Comments

Several commenters recommended exclusions to the prohibition on re-disclosure of substance use disorder patient data. A commenter said patients should be able to consent to the disclosure of substance use disorder information to a covered entity and such information would be protected by HIPAA, but would be free from the re-disclosure prohibition. Some commenters said SAMHSA should permit re-disclosure of substance use disorder treatment information for the purpose of treatment and/or care coordination. Another commenter suggested an exemption for providers within a given PDMP, CCO, ACO or HIE, for the purposes of treatment, payment, or health care operations. A commenter said SAMHSA should allow re-disclosures without patient consent for public health purposes to prevent disease or control injury or disability. Lastly, a commenter said SAMHSA should add a category under subpart D "Disclosures without Patient Consent" to include state health data organizations that collect data under a legislative authority.

SAMHSA Response

Due to its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA. In light of the statute, SAMHSA declines to create the specific suggested exclusions from the use and disclosure restrictions. SAMHSA will specifically address disclosures to subcontractors and contractors for health care purposes in the SNRPM.

Public Comments

Commenters requested that SAMHSA provide guidance in several areas, including the type of permissible information that can be disclosed; applicability to co-occurring disorders; and applicability to multi-use organizations. A commenter said SAMHSA should publish the medical codes (e.g., ICD-10s) that are affected by this provision.

SAMHSA Response

As for the type of permissible information that can be disclosed, the proposed clarifications to § 2.32 clarify that the prohibition on re-disclosure only applies to information that would identify, directly or indirectly, an individual as having been diagnosed, treated, or referred for treatment for a substance use disorder, such as indicated through standard medical codes, descriptive language, or both, and allows other health-related information shared by the part 2 program to be re-disclosed, if permissible under other applicable laws.

Regarding the re-disclosure of information related to co-occurring disorders, only the substance use disorder information is covered by part 2. The mental health information in a patient record is not. However, part 2 programs must ensure adequate confidentiality protections for mental health patient data that are applicable based on any relevant federal or state law.

Public Comments

Commenters proposed many other recommendations to improve the re-disclosure provision. One commenter said the rule should specify the consequences part 2 providers will face if they violate the proposed rule's prohibition on re-disclosure. A commenter said non-part 2 programs that prescribe substance use disorder medication should not be forbidden from disclosing such prescriptions, nor required to state the purpose of the medication. A commenter said the rule should continue to prohibit information being shared with law enforcement for criminal prosecution. A commenter said SAMHSA should include an updated sample Notice of Prohibition of Re-disclosure in the final rule. One commenter said patients should have the ability to remove their substance use disorder history from their medical record after ten years. A commenter said SAMHSA should rescind the proposed prohibition on re-disclosure relative to general designations and advocate for

the medical community to do more within their industry to recognize and provide appropriate, comprehensive care for those living with substance use disorders.

SAMHSA Response

Regarding the consequences for violation of the re-disclosure prohibition, each disclosure made with the patient's written consent must be accompanied by the notice of prohibition on re-disclosure. Under 42 U.S.C. 290dd-2 (f), any person who violates any provision of this section or any regulation issued pursuant to this section shall be fined in accordance with Title 18.

Regarding the comment on non-part 2 prescribers, prescribers that are not covered by part 2 are not prohibited from disclosing such prescriptions nor required to specify the purpose of such prescriptions.

On prohibition of information being shared with law enforcement for criminal prosecution, this prohibition remains in effect. Specifically, SAMHSA has clarified § 2.32(a) to state "[t]he federal rules restrict any use of the information to criminally investigate or prosecute any patient with a substance use disorder, except as provided at §§ 2.12(c)(5) and 2.65."

Public Comments

A commenter stated that individuals or entities who are not part 2 programs may not be familiar with the specific consent requirements of part 2, so the next-to-last sentence of § 2.32 should include a citation to § 2.31.

SAMHSA Response

SAMHSA appreciates the suggestion and has revised § 2.32 to add a reference to the § 2.31 to the penultimate sentence in paragraph (a).

L. Disclosures to Prevent Multiple Enrollments (§ 2.34)

SAMHSA is adopting this section as proposed. SAMHSA has modernized § 2.34 by updating terminology and revising corresponding definitions. SAMHSA also consolidated definitions by moving definitions from this section to the part 2 definitions provision (§ 2.11), as discussed in Section III.D.

Public Comments

A few commenters supported disclosures to prevent multiple enrollments. Some urged the proposed regulations to go further and specifically allow registries in the form of HIEs or PDMPs to share controlled substance prescriptions in the same manner that it would allow withdrawal management or

maintenance treatment programs. The aim would be to prevent multiple prescribing of prescription drugs that can be abused. Other commenters argued that the registry should be available to check enrollment beyond 200 miles. Asserting that the requirement to list every site that may be contacted in the consent document is an unusual burden, one of these commenters suggested that the concern can be better addressed by indicating "any licensed treatment center within the state when a patient presents for treatment." One commenter requested clarification as to what type of "central registry" is being considered for disclosure of patient records. Another suggested language that allows for multiple payments to providers in situations where clients are enrolled in multiple programs and where programs may be obtaining multiple payments for multiple services.

SAMHSA Response:

Central registries, defined as "an organization that obtains from two or more member programs patient identifying information about individuals applying for withdrawal management or maintenance treatment for the purpose of avoiding an individual's concurrent enrollment in more than one treatment program," serve a different purpose than HIEs or PDMPs. According to the Centers for Disease Control and Prevention, PDMPs are state-run electronic databases used to track the prescribing and dispensing of controlled prescription drugs to patients. They are designed, in part, to monitor this information for suspected abuse or diversion (i.e., channeling drugs into illegal use), and can give a prescriber or pharmacist critical information regarding a patient's controlled substance prescription history. Although PDMPs may serve many valuable purposes, SAMHSA decided not to address issues pertaining to e-prescribing and PDMPs in the final rule because, as stated in the NPRM, they were not ripe for rulemaking at the time due to the state of technology and because the majority of part 2 programs are not prescribing controlled substances electronically.

Under § 2.34(a)(3)(ii), the consent may authorize a disclosure to any withdrawal management or maintenance treatment program established within 200 miles of the program after the consent is given without naming any such program. Regarding comments on the 200-mile limit, SAMHSA declines to make any changes to the 200-mile limit because it is unlikely that a patient would be

enrolled in multiple programs greater than 200 miles from each other. The regulations do not confine the 200-mile limit to within a state.

As for the request to allow a consent for disclosure to “any licensed treatment center within the state where a patient presents for treatment,” SAMHSA has concluded that the proposed specificity is needed. Section 2.34 requires that the consent must list the name and address of each central registry and each known withdrawal management or maintenance treatment program to which a disclosure will be made. This specificity was retained because the purpose of the section is to prevent multiple enrollments that would result in a patient receiving substance use disorder treatment medication from more than one provider, thereby increasing the likelihood for an adverse event or diversion.

Regarding the request to allow for multiple payments to providers in situations where clients are enrolled in multiple programs and where programs may be obtaining multiple payments for multiple services, SAMHSA has determined that this request is outside of the scope of the proposed part 2 changes in the NPRM.

M. Medical Emergencies (§ 2.51)

SAMHSA is adopting this section as proposed. SAMHSA has revised the medical emergency exception to give providers more discretion to determine when a “bona fide medical emergency” (42 U.S.C. 290dd–2(b)(2)(A)) exists. The revised language states that patient identifying information may be disclosed to medical personnel to the extent necessary to meet a bona fide medical emergency in which the patient’s prior informed consent cannot be obtained. SAMHSA continues to require the part 2 program to immediately document, in writing, specific information related to the medical emergency.

1. General

Public Comments

Many commenters expressed support for the proposed change in language of the medical emergency exception to provide medical personnel with increased discretion to determine a “bona fide medical emergency.” Some commenters expressly supported aligning the regulatory language with the statutory language for medical emergencies. A commenter supported the special rule that would allow the disclosure of patient identifying information to medical personnel at the

FDA who provide reason to believe that the health of any individual may be threatened by a product under the FDA’s jurisdiction and that the information used solely for notifying the patient or their physicians of the potential dangers.

However, several commenters warned that part 2 programs should not be expected to assume the unrealistic burden of liability for a HIE’s capability to comply with all part 2 requirements. Another commenter argued the current medical emergency exception is clear under current (1987) law and providers are already making the determination as to what constitutes an emergency.

SAMHSA Response

SAMHSA appreciates the support of commenters on this issue. With regard to the comment about the burden of liability, SAMHSA asserts that the treating provider must make the determination as to whether a bona fide medical emergency exists. However, concern alone about potential drug interaction may not be sufficient to meet the standard of a medical emergency. Thus, based on the circumstances of the presenting situation, SAMHSA recommends that health care providers obtain consent from the patient where feasible.

2. Definition of “Bona Fide Medical Emergency”

Public Comments

Commenters provided various suggestions for expanding the definition to include disclosure of records for mental health involuntary commitment evaluations and other psychiatric emergencies; to detoxification centers; when there is “risk of serious harm” to self or others by reason of a substance use disorder; in order to save a life or prevent further injury of a person who is not able to make a rational decision due to mental impairment; and to prevent suicide. Several commenters asserted the revisions should include an exception for disclosure without consent in order to prevent medical emergencies from occurring in the first place. Other commenters suggested not limiting this section to only medical emergencies, but allowing disclosures for treatment, payment, and operation purposes. A few commenters supported adding a duty to warn exception where a substance use disorder patient discloses intent, plan, or means to inflict harm onto another individual or the public.

SAMHSA Response

On the request to expand the definition, while the statute authorizes

an exception for a bona fide medical emergency, broadening this provision to include non-emergency situations would be inconsistent with the statutory scheme. With respect to warnings, part 2 does not impose a duty to warn—or a duty to disclose any information. It only governs when disclosures may be made, not when they must be made. SAMHSA has previously provided FAQ guidance on when a part 2 program may make a disclosure without divulging patient identifying information. SAMHSA will monitor this issue and may consider whether additional subregulatory guidance in the future may be helpful.

Regarding involuntary commitment, patient identifying information may be disclosed to medical personnel to the extent necessary to meet a bona fide medical emergency in which the patient’s prior informed consent cannot be obtained. This may include situations in which the patient is not regarded as being legally competent under the laws of their jurisdiction. Such circumstances may apply when a patient is subject to an involuntary commitment (*i.e.*, formally committed for behavioral health treatment by a court, board, commission, or other lawful authority). Consistent with § 2.51, during the period of time a patient is not regarded as being legally competent, any previously established, unrevoked, or unmodified general designation remains valid for their current treating providers until such time as the individual’s competency is restored. The treating provider(s) would, in such circumstances, be expected to follow provisions of this rule pursuant to medical emergencies, including all documentation requirements. Importantly, at any time when a patient is legally competent, they may modify their general designation consistent with the provisions of this final rule.

Public Comments

Other commenters suggested restrictions on the definition of “bona fide medical emergency” or other limitations to the medical emergency exception. Several recommended that the final rule explicitly state that the medical emergency exception continues to be limited to circumstances in which an individual needs immediate medical care and the patient’s consent cannot be obtained. The medical emergency exception does not apply to situations where the patient could but will not consent, since the exception should not be used to avoid obtaining consent. A commenter urged that a “bona fide medical emergency” be limited to circumstances in which an individual

needs immediate medical care because of an immediate (not future) threat to a person's health.

A commenter asserted that it be specified that a "medical emergency" is determined by the treating provider.

A commenter asserted that the information disclosed in a "bona fide medical emergency" should be more clearly limited and the rule should require the provider to affirmatively share the required documentation of the disclosure with the patient.

A commenter stated that part 2 information disclosed in a medical emergency should not be re-disclosed for criminal investigation or prosecution.

A few commenters advocated for emergency care providers to be permitted to access only limited part 2 information available through a HIE.

SAMHSA Response

On situations in which the patient could but will not consent, SAMHSA has not revised the regulatory language, but agrees that "patient consent could not be obtained" refers to the fact that the patient was incapable of providing consent, not that the patient refused consent.

With regard to the request that a "medical emergency" be determined by the treating provider, SAMHSA clarifies that any health care provider who is treating the patient for a medical emergency can make that determination.

On limiting the information disclosed, § 2.13(a) of the rule indicates that the amount of information to be disclosed "must be limited to that information which is necessary to carry out the purpose of the disclosure."

With regard to the comment on re-disclosure, SAMHSA will address re-disclosure of part 2 information obtained during a medical emergency in subregulatory guidance rather than in the rule, as it has in the past.

Public Comments

Several commenters asserted that automated or pre-determinations for medical emergencies should be allowed. A commenter suggested that pre-defining the criteria for medical emergency would enable HIEs to automate the decisions about whether a patient visit is a medical emergency. The commenter said such criteria could be defined by each individual hospital or could be based on national standards. Another commenter argued that Level of Care Utilization System (LOCUS) scores and the ASAM levels could be used as clinical standards for determining "bona fide emergency" situations where

behavioral health information should be more broadly shared.

SAMHSA Response

Automated electronic health information systems can be programmed to flag specific patient information for medical personnel to use in determining whether a bona fide medical emergency exists and may be programmed to provide alerts to authorized providers. However, as SAMHSA has explained in previous FAQ guidance, one may not automate the determination of a medical emergency.

Public Comments

Many commenters requested examples of emergency situations in order to minimize confusion among providers and organizations as to the circumstances under which medical emergencies would be valid. Many of these commenters provided their own instances requesting clarification if disclosure would be necessary.

SAMHSA Response

SAMHSA plans to provide the requested examples in subregulatory guidance after the publication of this final rule.

3. Documentation of Medical Emergency Public Comments

Many commenters argued for removal of the requirement that a part 2 program immediately document a disclosure pursuant to a medical emergency. A commenter stated that SAMHSA should simplify the existing onerous documentation requirements that impede vital sharing of information. Another commenter suggested part 2 programs should rely on other functionalities that retain disclosure and specific information related to the medical emergency, such as audit reports.

A commenter suggested the language be modified to allow the part 2 program to document the disclosure "promptly" rather than "immediately."

Other commenters suggested eliminating the requirement to provide "the name of the medical personnel to whom disclosure was made."

Another commenter asserted that the rule should allow an HIE to maintain documentation of disclosures for the part 2 program and provide ongoing access to such information.

A commenter suggested that a "list of the information disclosed" be added to the list of information that must be entered into the patient record at the time of the emergency disclosure.

SAMHSA Response

SAMHSA is not convinced of the benefit of replacing "immediately" with "promptly," particularly since neither term is defined in the final rule. With regard to the suggestion to eliminate the requirement to provide "the name of the medical personnel to whom disclosure was made," the current (1987) part 2 regulations (as well as the regulatory language in the NPRM) require part 2 programs to document the name of the medical personnel to whom disclosure was made and their affiliation with any health care facility because it is important for that information to be available to the part 2 program and the patient.

4. Other Comments on Medical Emergencies

Public Comments

Some commenters suggested that SAMHSA expand who is authorized to access emergency records. Some commenters requested the definition of "medical personnel" include any professional who provides health-related services, including behavioral health services, rather than being limited to medical doctors, nurses, and emergency medical technicians. Other commenters suggested the language be changed so that "non-medical personnel" who are currently working with clients in an emergency situation have access to the patient emergency record. A commenter argued that substance use disorder patients commonly face medical emergencies and therefore it is prudent for an emergency department be named or identified under the "general disclosure" provision.

SAMHSA Response

Part 2 allows patient identifying information to be disclosed to medical personnel in a medical emergency. Part 2 does not define the term "medical personnel" but merely provides that information can be given to medical personnel who have a need for information about a patient in a bona fide medical emergency. It is up to the health care provider or facility treating the emergency to determine the existence of a medical emergency and which personnel are needed to address the medical emergency. The name of the medical personnel to whom the disclosure was made, their affiliation with any health care facility, the name of the individual making the disclosure, the date and time of the disclosure, and the nature of the medical emergency must be documented in the patient's records by the part 2 program disclosing

the information. SAMHSA does not have the authority to permit information to be disclosed to “non-medical personnel” pursuant to a medical emergency because the authorizing statute for the regulations codified at 42 CFR part 2 limits disclosures to “medical personnel.”

With regard to identifying emergency departments under the “general disclosure” provision, the medical emergency exception requires that a provider determine that a bona fide medical emergency exists and that a patient’s visit to an emergency room does not automatically constitute such an emergency. SAMHSA reiterates that there is a difference between refusal to consent and being incapable of consenting to disclosure.

Public Comments

Commenters requested clarification on which entity, the receiving emergency department or HIE, would be obligated to maintain part 2-compliance with information received through a declared patient emergency. A commenter argued the rule should state that a hospital emergency room or other health care provider that obtains program information under the medical emergency exception would not be subject to part 2 rules with respect to such program information.

SAMHSA Response

Part 2 requires that when a disclosure is made in connection with a medical emergency, the part 2 program must document in the patient’s record the name and affiliation of the recipient of the information, the name of the individual making the disclosure, the date and time of the disclosure, and the nature of the emergency. Thus, data systems must be designed to ensure that the part 2 program is notified when a “break the glass” disclosure occurs and part 2 records are released pursuant to a medical emergency. The notification must include all the information that the part 2 program is required to document in the patient’s records. The information about emergency disclosures should also be kept in the HIE’s electronic system. Regarding the requests for clarification on part 2 applicability to information disclosed pursuant to a medical emergency, SAMHSA understands the importance of these questions. However, because these issues are not related to specific proposals made in the NPRM, SAMHSA plans to address them in subregulatory guidance after the publication of the final rule.

Public Comments

A commenter warned that emergency disclosures for requesting of part 2 records can occur by means other than solely through an HIE.

SAMHSA Response

The EHR is the vehicle for the disclosure of the part 2 record but not the decision-maker. The name of the person who makes the determination to disclose and discloses the information electronically through an EHR system should be recorded. SAMHSA clarifies that the example used of an HIE was not meant to be exhaustive to include all potential sources of disclosures.

N. Research (§ 2.52)

SAMHSA is modifying this section from the regulatory text proposed, as described in detail below. SAMHSA is implementing several changes to the research provision. First, we have revised the section heading by deleting the word “activities.” In addition, SAMHSA has revised the research exception to permit data protected by 42 CFR part 2 to be disclosed by any individual or entity that is in lawful possession of part 2 data (lawful holder of part 2 data) under certain conditions.

SAMHSA also addressed data linkages because the process of linking two or more streams of data opens up new research opportunities and potential risks. In the NPRM, SAMHSA proposed to permit researchers to request to link data sets that include patient identifying information if (1) the data linkage uses data from a federal data repository, and (2) the project, including a data protection plan, is reviewed and approved by an Institutional Review Board (IRB) registered with the Office for Human Research Protections (OHRP) in accordance with 45 CFR part 46. SAMHSA requested comments in the NPRM on whether to expand the data linkages provision beyond federal data repositories. After considering the public comments received on this topic, as discussed in greater detail below, SAMHSA has revised the data linkages provision to permit researchers to link to federal and non-federal data repositories provided certain conditions are met.

The revised § 2.52 permits a researcher to include part 2 data in reports only in aggregate form. SAMHSA clarified in this final rule that, with respect to these types of reports, the patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized

means to identify a patient, directly or indirectly as having or having had a substance use disorder. SAMHSA requires any individual or entity conducting scientific research using patient identifying information to meet additional requirements to ensure compliance with confidentiality provisions under part 2. Note that de-identified information can be shared for the purposes of research; this was the status quo under the previous part 2 regulations, and this final rule does not change that.

Finally, § 2.52 addresses, in addition to the maintenance of part 2 data, the retention and disposal of such information used in research. SAMHSA expanded the provisions in § 2.16 (Security for records) and references the policies and procedures established under § 2.16 in revised § 2.52. The NPRM language in (a)(1) only referenced “the HIPAA privacy rule at 45 CFR 164.512(i)” while the final rule regulatory language in (a)(1) now says: “consistent with the HIPAA Privacy Rule at 45 CFR 164.508 or 164.512(i), as applicable”.

1. General

Public Comments

Many commenters expressed support for revising the research exception to permit data protected by part 2 to be disclosed to qualified personnel for the purpose of conducting scientific research by a part 2 program or any other individual or entity that is in lawful possession of part 2 data (lawful holder of part 2 data). Many commenters expressed general support for expanding the circumstances in which research may be conducted with part 2 data. Many commenters supported disclosure of data from other lawful holders of substance use disorder records with researchers. Commenters supported the prevention of data scrubbing of records and other data suppression related to substance use disorders. Some commenters specified support to stop “suppression” of Medicare and Medicaid data from any records associated with substance use disorder.

SAMHSA Response

SAMHSA’s revisions to the research provision address these concerns regarding access to substance use disorder information from CMS claims/ encounter data disclosed for research purposes. First, the research provision permits part 2 programs and other lawful holders of patient identifying information (not just part 2 program directors) to disclose data protected by

42 CFR part 2 to qualified personnel for the purpose of conducting scientific research if the researcher provides documentation of meeting certain requirements related to other existing protections for human research. Second, SAMHSA also addressed data linkages to enable researchers holding part 2 data to link to data sets from federal and non-federal data repositories provided certain conditions are met as spelled out in section 2.52.

Public Comments

Another commenter supported the use of data use agreements for all research transfers of part 2 information and requested the proposed regulation provide examples of these agreements. A commenter stated that the agency should allow research of additional administrative data sets such as those held by HIEs, ACOs, state Medicaid agencies, commercial insurance companies, and Medicare Advantage plans with appropriate IRB reviews.

SAMHSA Response

Although not required by § 2.52, the regulation would permit any lawful holder of patient identifying information to require a researcher sign a data use agreement spelling out these requirements.

SAMHSA is adopting its proposal regarding the research exception to permit data protected by 42 CFR part 2 to be disclosed to qualified personnel for the purpose of conducting scientific research by a part 2 program or any other individual or entity that is in lawful possession of part 2 data if the researcher provides documentation of meeting certain requirements related to other existing protections for human research. If an entity meets the requirements of an “other lawful holder of patient identifying information,” as described in the preamble of this final rule, the entity would be authorized to disclose part 2 data for research purposes in accordance with § 2.52.

Public Comments

Another commenter asked a series of questions related to the release of data by lawful holders that are not part 2 programs (*e.g.*, HIEs). The commenter asked how these HIEs, third-party payers, etc., will be able to determine that a researcher will maintain the confidential patient identifying information in accordance with the security requirements set out in § 2.52(a)(2); how will the “lawful holders” be able to assess whether the potential benefits of the research outweighs any risks to confidentiality as required by § 2.52(a)(3); and what

individual at these various “lawful holders” will be the equivalent of a part 2 program director and have the authority to make these decisions. The commenter stated that it is almost certain that these “lawful holders” will not sufficiently know the confidentiality regulations so as to ensure the researchers are aware of, and will comply with the prohibition against re-disclosure specified in § 2.52(b).

SAMHSA Response

SAMHSA examined the existing regulations that protect human subjects in research and concluded that, if those requirements were fulfilled, 42 CFR part 2 would ensure confidentiality protections consistent with the statute, while providing the expanded authority for disclosing patient identifying information. Requirements that ensure compliance with HIPAA and the Common Rule (*e.g.*, IRB and/or privacy board review) with respect to research provide these assurances, including that the researcher has a plan to protect and destroy identifiers and to not re-disclose the information in an unauthorized manner. The individual who would make the determination to disclose part 2 data on behalf of a part 2 program or other lawful holder would be the individual designated as director or managing director, or individual otherwise vested with authority to act as chief executive officer or their designee. In addition, there is nothing in the regulation that requires this individual to disclose the data, even if the researcher provides documentation of compliance with the requirements under § 2.52.

Public Comments

A commenter stated that the proposed rule adopted an overly narrow approach to disclosures for scientific research, by limiting part 2 disclosures only to entities or individuals subject to the HIPAA Privacy Rule or the HHS Common Rule. The commenter stated that because the commenter is not a HIPAA covered entity or business associate under HIPAA, and is not currently subject to the Common Rule, the commenter does not appear to meet the conditions required for disclosure for scientific research. The commenter stated that limiting disclosures for research purposes only to entities or individuals subject to the HIPAA Privacy Rule and/or Common Rule is inconsistent with the language and intent of the governing statute, which broadly authorizes disclosures to qualified personnel for the purposes of conducting scientific research.” (42 U.S.C. 290dd–2(b)(2)(B)). The

commenter urged SAMHSA to interpret research broadly to include state analytic activities to identify patterns and variations in the cost, quality and delivery of health care, similar to the approach adopted by CMS for the release of CMS claims/encounter data to state agencies.

SAMHSA Response

The revised research exception will now permit data protected by 42 CFR part 2 to be disclosed for research purposes by part 2 programs and other lawful holders of patient identifying information not just by part 2 program directors as the 1987 final rule regulations require. Because SAMHSA is expanding the authority for disclosing patient identifying information beyond part 2 program directors, it was necessary to establish a mechanism to ensure that confidentiality protections consistent with the statute were fulfilled in all cases. SAMHSA determined that the existing regulations that protect human subjects in research would accomplish this, and, therefore, decided to limit the permitted disclosures for research purposes under part 2 to instances in which the researchers would meet the requirements governing their receipt of protected health information from a covered entity under the HIPAA privacy rule and/or the requirements governing research on human subjects under the HHS Common Rule. Under this expanded authority, the HIPAA standards would be applied as a test regardless of whether the data source for the disclosure was a HIPAA covered entity.

Under 42 CFR part 2, the research provision provides clear policies on conducting research and protecting the confidentiality of patient identifying information, including their obligations to comply with requirements under 42 CFR 2.16, Security for Records.

Public Comments

A commenter stated that SAMHSA, in coordination with state regulators, should work together to issue guidance related to the application of the federal part 2 requirements to substance use disorder information that may be requested by states for public health and other purposes.

SAMHSA Response

The statute authorizing part 2 contains specific limited exceptions to the consent requirement, and making a change to exempt states from this requirement, under certain conditions, would be inconsistent with the statutory scheme.

Public Comments

One commenter stated that the expansion of the disclosure of patient identifying information should be limited to CMS and/or state governmental agencies that have authority over substance use disorder treatment services. The commenter stated that an unintended consequence of implementing the potential of wide-spread disclosure of previously protected information is that the protections the confidentiality regulations afforded patients will be eviscerated as essentially all the recipients of protected information, for the last 40 years will no longer be bound by the prohibition of re-disclosure, subjecting the patient's information to re-disclosure, without the patient's consent, to any individual or entity representing that they are conducting scientific research. The commenter argued that SAMHSA should limit the number of entities who can release patient identifying information to those who actually have the resources to verify that such disclosure to a researcher is for a valid research purpose; can ensure proper research protections are in place; and affirm the patient will not be more vulnerable as a result of the disclosure. The vast majority of lawful holders cannot adequately perform this analysis and therefore cannot protect the patient's interest as required under the part 2 regulations.

SAMHSA Response

SAMHSA declines to narrow the scope of the research provision as suggested. In developing the proposed rule, SAMHSA examined the existing regulations that protect human subjects in research and concluded that, if those requirements were fulfilled, 42 CFR part 2 would ensure confidentiality protections consistent with the statute, while providing the expanded authority for disclosing patient identifying information. Specifically, IRBs determine that, when appropriate, there are adequate provisions to protect the privacy of subjects and to maintain the confidentiality of data before approving the research (45 CFR 46.111(a)(7)). SAMHSA is interested in affording patients protected by 42 CFR part 2 the same opportunity to benefit from advanced research protocols while continuing to safeguard their privacy, and narrowing the scope of lawful holders that may disclose part 2 data for research purposes, as suggested by the commenter would limit the ability of patients to benefit from these research efforts.

Public Comments

Other commenters expressed concern about the expanded research exception. A commenter stated that the proposed provision would create a wide opportunity for data sharing with increased risk of adverse impact. Similarly, a commenter warned that the research exception revision poses unnecessary risk of data breach of patient's confidentiality.

SAMHSA received a large number of comments, particularly from researchers, expressing support for the revised research provision. These commenters expressed concern that, without this revised provision, researchers' access to substance use disorder-related data in Medicare and Medicaid claims/encounter databases would be limited to instances in which consent could be obtained. A number of commenters cited a study by K. Rough et al. published in the March 15, 2016, issue of the *Journal of the American Medical Association* that found the exclusion of part 2 data from Medicare and Medicaid claims/encounter data in research contexts coincided with decreases in the rates of diagnoses for certain conditions commonly co-occurring with substance use disorder. Commenters reiterated a point made in the article that underestimating diagnoses has the potential to bias health services research studies and epidemiological analyses. Some commenters also stated that implementing appropriate data safeguards can protect patient privacy while still allowing researchers access to critical data.

SAMHSA Response

SAMHSA agrees with the commenters' assertions regarding how the exclusion of this substance use disorder data hampers vital public health research, particularly in light of the growing national opioid epidemic and is finalizing the research data access proposal in the final rule.

With respect to concerns about privacy and the expansion of the research exception, SAMHSA clarifies that the research exception is intended to permit data protected by 42 CFR part 2 to be disclosed to qualified personnel for the purpose of conducting scientific research by a part 2 program or any other individual or entity that is in lawful possession of part 2 data (lawful holder of part 2 data).

The research provision (§ 2.52(b)) already includes a requirement that the researcher receiving the part 2 data is fully bound by 42 CFR part 2. Although not required by § 2.52, the regulation

would permit any lawful holder of patient identifying information to require a researcher to sign a data use agreement spelling out these requirements. Lawful holders of patient identifying information may disclose part 2 data without patient consent for research purposes only under the specified circumstances under the research provision.

Public Comments

A commenter requested clarification as to whether "lawful holders" may disclose part 2 data to third parties to conduct research or whether the "lawful holder" has to conduct the research itself.

Citing the HIPAA tracking criteria for disclosures outside the entity pursuant to a waiver of authorization, another commenter asked SAMHSA to clarify what tracking requirements would apply to disclosure of part 2 data for purposes of research. This commenter also asked SAMHSA to clarify whether disclosure for purposes of research means sharing the data with anyone for research purposes or only applies when part 2 data is shared with an outside entity.

SAMHSA Response

The research provision permits part 2 programs and other lawful holders of patient identifying information to disclose data protected by 42 CFR part 2 to qualified personnel for the purpose of conducting scientific research if the researcher provides documentation of meeting certain requirements related to other existing protections for human research. "Qualified personnel" is a statutory term and SAMHSA has clarified that this term includes those individuals who meet the requirements specified in the research provision to receive part 2 data for the purpose of conducting scientific research.

The proposed rule did not include a tracking requirement for information disclosed under the research exception and so we are declining to include such a requirement in the final rule.

Public Comments

Another commenter reasoned that municipalities should be able to receive and match patient identifying information and then use the de-identified data for planning and analysis purposes (e.g., determining how many criminal justice-involved defendants have a previous history of substance use disorder treatment).

SAMHSA Response

SAMHSA declines to make the recommended expansion to the research

provision. SAMHSA is revising the research exception to permit data protected by 42 CFR part 2 to be disclosed to qualified personnel for the purpose of conducting scientific research by a part 2 program or any other individual or entity that is in lawful possession of part 2 data (lawful holder of part 2 data). "Qualified personnel" is a statutory term and SAMHSA has clarified that this term includes those individuals who meet the requirements specified in the research provision to receive part 2 data for the purpose of conducting scientific research. This term would not preclude researchers from conducting such research efforts on behalf of a municipality. However, part 2 prohibits researchers from re-disclosing patient identifying information except back to the individual or entity from whom that patient identifying information was obtained or as permitted under § 2.52(c) of this section, and permits researchers to include part 2 data in reports only in aggregate form in which patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized means to identify a patient, directly or indirectly, as having or having had a substance use disorder.

Public Comments

A commenter expressed support for the strengthened proposed research provision whereby patient identifying information may be released only after the program director has determined the research recipient has obtained appropriate IRB and/or privacy board approval and consent. Another commenter asserted that information that is de-identified and presented in aggregate should be permitted to be more readily used in research. The commenter stated that this was another area where SAMHSA can promote greater alignment with HIPAA, which provides allowances for covered information that is de-identified and presented in the aggregate.

SAMHSA Response

Part 2 only applies to information that would identify a patient as having or having had a substance use disorder. The revised research provision allows researchers to include part 2 data in reports only in aggregate form in which patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized means to identify a patient, directly or indirectly, as having or having had a substance use disorder. The revised § 2.52 also

requires researchers to maintain and destroy patient identifying information in accordance with the security policies and procedures established under § 2.16. SAMHSA aligned policy with HIPAA where possible. However, 42 CFR part 2 and its governing statute are separate and distinct from HIPAA, and the part 2 regulations use different terminology than used in HIPAA.

Public Comments

A commenter requested clarification on whether data disclosed to qualified personnel under § 2.52 would include "identifiable information." For example, this commenter asked why a name would be relevant if the data and information would be used for research. Another commenter stated that certain patient identifying information such as social security numbers should not be included, as it serves no purpose to researchers. The commenter stated that this can easily be mitigated by data segmentation and consent management, but until then the rule should be maintained in that the part 2 program director is the only individual authorized to release of information.

SAMHSA Response

The part 2 data that may be disclosed for research purposes include patient identifying information, as that term is defined in § 2.11. One reason researchers would need identifiable information is to link part 2 data to other data sets, or for conducting data linkages. SAMHSA also proposed to address data linkages, which requires identifiable information, because the process of linking two or more streams of data opens up new research opportunities and potential risks. For example, the practice of requesting data linkages from other data sources to study the longitudinal effects of treatment is becoming widespread. SAMHSA is interested in affording patients protected by 42 CFR part 2 the same opportunity to benefit from these advanced research protocols while continuing to safeguard their privacy. Likewise, SAMHSA revised the research provision to enable part 2 data to be disclosed for research purposes by part 2 programs and other lawful holders of patient identifying information so that patients may benefit from the additional scientific research that will be conducted and that will facilitate continual quality improvement of part 2 programs and the important services they offer. This additional research would not be able to be conducted if SAMHSA were to continue to maintain the existing part 2 research provision, as suggested.

2. Suggestions for Improvement of the Research Provisions

Public Comments

Some commenters made suggestions to improve privacy protections as it relates to research. A commenter suggested that the research provision require a certificate of confidentiality as a prerequisite to researcher access to part 2 information.

SAMHSA Response

The research provision (§ 2.52(b)) already includes a requirement that the researcher receiving the part 2 data is fully bound by 42 CFR part 2. Although not required by § 2.52, the regulation would permit any lawful holder of patient identifying information to require a researcher sign a data use agreement spelling out these requirements.

According to NIH, certificates of confidentiality do not take the place of good data security or clear policies and procedures for data protection, which are essential to the protection of research participants' privacy. Under 42 CFR part 2, the research provision provides clear policies on conducting research and protecting the confidentiality of patient identifying information, including their obligations to comply with requirements under 42 CFR 2.16, Security for Records.

Public Comments

A commenter concluded that the number of entities who could release patient identifying information should be limited to those who have the resources to verify the research is valid and the patient will not become more vulnerable as result of disclosure. A commenter suggested that strict policies be in place at all levels of research organizations to assure that prohibited re-disclosure of patient information does not occur. A commenter asserted that aligning part 2's requirements for a valid written consent with those applicable under the HIPAA Privacy Rule would avoid confusion. One commenter suggested that the filing of conflict of interest statements by the primary investigators and co-investigators be required. A commenter suggested a change in language to clarify that researchers will resist any judicial demand for access to patient records, except as permitted by these regulations.

SAMHSA Response

SAMHSA examined the existing regulations that protect human subjects in research and concluded that, if those requirements were fulfilled, 42 CFR part

2 would ensure confidentiality protections consistent with the statute, while providing the expanded authority for disclosing patient identifying information. Requirements that ensure compliance with HIPAA and the Common Rule (e.g., IRB and/or privacy board review) with respect to research provide these assurances, including that the researcher has a plan to protect and destroy identifiers and to not re-disclose the information in an unauthorized manner. Disclosure of part 2 data also would be allowable for research that qualifies for exemption under the Common Rule due to the lower risk to subjects in the circumstances where exemptions apply, and this has been clarified in § 2.52(a)(2). The individual who would make the determination to disclose part 2 data on behalf of a part 2 program or other lawful holder would be the individual designated as director or managing director, or an individual otherwise vested with authority to act as chief executive officer or their designee. In addition, there is nothing in the regulation that requires this individual to disclose the data, even if the researcher provides documentation of compliance with the requirements under § 2.52.

SAMHSA declines to make the recommended change regarding conflicts of interest to the research section (§ 2.52). The revised research provision requires reviews, either by an IRB and/or privacy board, for the specific purpose of minimizing risk to patients and their privacy. The research provision also requires researchers requesting data linkages, as described in § 2.52(c), to have the request reviewed and approved by an IRB registered with the Department of Health and Human Services, Office for Human Research Protections in accordance with 45 CFR part 46 to ensure that patient privacy is considered and the need for identifiable data is justified. In addition, HHS has issued subregulatory guidance that, to the extent financial interests may affect the rights and welfare of human subjects in research, IRBs, institutions, and investigators need to consider what actions regarding financial interests may be necessary to protect those subjects.

SAMHSA proposed to require any individual or entity conducting scientific research using patient identifying information to meet additional requirements to ensure compliance with confidentiality provisions under part 2. Among these are a provision (§ 2.52(b)(1)) that “requires researchers to be fully bound by these regulations and, if necessary, to resist in judicial proceedings any efforts to obtain access to patient records

except as permitted by these regulations.”

Public Comments

Another commenter suggested that the rule allow an extended disclosure period specific to research that could be included in the initial disclosure approval.

SAMHSA Response

The part 2 regulations do not specify a disclosure period in the research provision.

Public Comments

A commenter said that it would bring clarity and aid entities seeking to comply with the proposed rule if it included a definition of “repository” and of “scientific research.” The commenter stated that the HHS Common Rule provisions, referenced repeatedly in the proposed rule, apply only to activities which meet the definition of research involving human subjects. It is not clear whether SAMHSA intends to adopt Common Rule definitions or create a separate scheme.

SAMHSA Response

SAMHSA did not propose a regulatory definition for these terms in the NPRM and respectfully declines to define the terms in the final rule as suggested. “Scientific research” is a statutory term that is not defined. Researchers requesting part 2 data for the purposes of conducting scientific research and whose research is subject to the Common Rule would need to comply with requirements for the Common Rule as well as those of part 2. SAMHSA refers to the term “repository” in the context of the data linkages provision, and intended the term to broadly refer to data that is stored and managed. SAMHSA may address undefined terms that require further elaboration in subregulatory guidance or in subsequent rulemaking.

Public Comments

One commenter supported provisions that allow states to work with outside entities, which are HIPAA and Common Rule compliant, to conduct research that will improve care and drive quality outcomes for Medicaid beneficiaries with a substance use disorder.

SAMHSA Response

SAMHSA supports the efforts of part 2 stakeholders to work together collaboratively and in compliance with the law. Part 2 prohibits researchers from re-disclosing patient identifying information except back to the

individual or entity from whom that patient identifying information was obtained or as permitted under the data linkages provision. Researchers may include part 2 data in reports only in aggregate form in which patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized means to identify a patient, directly or indirectly, as having or having had a substance use disorder.

3. HIPAA and HHS Common Rule Requirements

Public Comments

Many commenters expressed support for aligning requirements for disclosure of information for conducting research with existing requirements for research as regulated by the HHS Common Rule (45 CFR part 46). A commenter remarked that an alternate approach would be to create a single category of consent for research purposes.

SAMHSA Response

In this part 2 final rule, SAMHSA has implemented certain revisions that are predicated on the current version of the Common Rule (45 CFR part 46, Protection of Human Subjects, promulgated in 1991). Should conflicting policies be created in the future, SAMHSA will take appropriate action (e.g., issue an NPRM or technical correction). With respect to creating a single category of consent for research, the existing consent requirements permit patient consent for the disclosure of patient identifying information for the purpose of scientific research.

4. Data Linkages

SAMHSA revised § 2.52 from the proposed regulatory text by separating out the data linkages provisions into its own paragraph, § 2.52(c) for purposes of clarity and readability. In addition, the final § 2.52 addresses data linkages to enable researchers holding part 2 data to link to data sets from federal and non-federal data repositories as explained in greater detail below. SAMHSA proposed to permit researchers to request to link data sets that include patient identifying information under certain conditions. We proposed to limit the data repositories from which a researcher may request data for data linkages purposes to federal data repositories because federal agencies that maintain data repositories have policies and procedures in place to protect the security and confidentiality of the patient identifying information that must be submitted by a researcher in order to link the data sets. SAMHSA

sought input from the public regarding whether to expand the data linkages provision beyond federal data repositories; what confidentiality, privacy, and security safeguards are in place for those non-federal data repositories; and whether those safeguards are sufficient to protect the security and confidentiality of the patient identifying information.

Public Comments

Several commenters suggested that researchers be allowed to perform data linkages between data sets containing substance use disorder data. However, some warned that the proposed rule was unclear regarding data linkages. One commenter said SAMHSA should clarify that researchers have the option to submit data to a federal data repository, like CMS, for linking of federal data, but are not required to do so. Other commenters argued that proposed § 2.52 should explicitly allow researchers to perform their own data linkages between data sets containing substance use disorder records. A commenter asserted that non-profit entities who engage in research should be distinct from for-profit organizations and that for-profit organizations should not be allowed access to large linked data sets.

Many commenters expressed support for permitting linkage with non-federal repositories where adequate, flexible safeguards are in place to protect the security and confidentiality of part 2 data. A commenter asserted that only allowing researchers to combine 42 CFR part 2 records received without patient consent with records from a federal repository is not consistent with the goal of enhancing research conducted with data protected by part 2. In particular, commenters pointed out that many state, local, tribal, and corporate data repositories with hospital emergency department and discharge, trauma registry, and birth and death records would not be covered by the federal data linkages language in the proposed rule, thereby hampering important research and evaluation activities. Additionally, commenters supported the expansion of data linkages in order to better support the analysis required by evolving health care delivery and payment models, such as Accountable Care Organizations.

Commenters urged that appropriate privacy and security protections are in place, to include physical security and disposition of data if SAMHSA permits linkages to non-federal data repositories. One commenter remarked that protections imposed by federal repositories that are not imposed by

other repositories should be identified and considered as requirements, so as not to lose the insight offered through additional linkage opportunities.

Another suggested implementation of data use agreement language to non-federal repositories. A commenter reasoned IRBs or privacy officers could ensure other repositories are in compliance with part 2 requirements.

However, a few commenters did not support expansion of data linkage to non-federal repositories. Some commenters expressed concerns about the security of data in both federal and non-federal data repositories citing examples of healthcare data breaches. One commenter concluded data linkage to any data repositories be withdrawn from the proposed language citing the federal agencies as well as health care data repositories inability to adequately safeguard personal information. Another commenter suggested data repositories performing the data linkages, if outside of part 2 entity, not be given information subject to part 2.

SAMHSA Response

SAMHSA would like to clarify that the data linkages provision is not intended to prohibit a researcher from linking a data set in the researcher's possession that contains part 2 data with a data set from a third party source, so long as the part 2 data is not further disclosed in the data linkage process and the researcher adheres to any applicable confidentiality, privacy, and security requirements and safeguards. Regarding the comment on for-profit organizations, whether the researcher is a for-profit or not-for-profit organization, the researcher would be required to have IRB approval and/or privacy board review of their research, and, additionally, IRB approval of the research project that contains the data linkage component, to ensure risks to the patient and their privacy are minimized. In addition, part 2 prohibits researchers from re-disclosing patient identifying information except back to the individual or entity from whom that patient identifying information was obtained or as permitted under the data linkages provision. Researchers may include part 2 data in reports only in aggregate form in which patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized means to identify a patient, directly or indirectly, as having or having had a substance use disorder.

In response to public comments, SAMHSA has decided in the final rule to permit data linkages to both federal

and non-federal data repositories subject to the conditions explained below. SAMHSA believes that these changes will enhance research while still ensuring the protection of part 2 patient identifying information. SAMHSA agrees with commenters that many non-federal data repositories, as well as federal data repositories, contain data that is critical to research and, therefore, SAMHSA is expanding data linkages provisions.

In the data linkages provision of this final rule (§ 2.52(c)), SAMHSA revises its proposal to enable researchers holding part 2 data to link to data sets from any repository, including non-federal repositories, provided that the linkage has been reviewed and approved by an Institutional Review Board registered with the Department of Health and Human Services, Office for Human Research Protections in accordance with 45 CFR part 46 to ensure that patient privacy is considered and the need for identifiable data is justified. In addition to having the request reviewed and approved by an IRB, the researcher must ensure that patient identifying information obtained under the rule's research provisions is not provided to law enforcement agencies or officials. SAMHSA states in the final rule that the data repository is fully bound by the provisions of part 2 upon receipt of the patient identifying data and must, after providing the researcher with the linked data, destroy or delete the linked data from its records, including sanitizing any associated hard copy or electronic media, to render the patient identifying information non-retrievable in a manner consistent with the policies and procedures established under § 2.16 Security for records. In addition, the data repository must ensure that any data obtained pursuant to part 2's research provisions is not provided to law enforcement agencies or officials.

Public Comments

One commenter recommended that SAMHSA expand data linkages beyond research to the broader need for it to be inclusive of coordinated care. The commenter stated that this is another area where SAMHSA could look to existing HIPAA provisions and align the part 2 provisions accordingly.

SAMHSA Response

SAMHSA declines to make the revision suggested by the commenter. The transfer of part 2 information for the purposes of research, as allowed under § 2.52, is an exception to patient consent, and, therefore, the data linkages provision cannot be expanded

to other parts of the regulation. Because of its targeted population, part 2 provides more stringent federal protections than most other health privacy laws, including HIPAA. However, SAMHSA aligned policy with HIPAA where possible.

5. Multi-Payer Claims Database

Public Comments

Many commenters urged the final rule to explicitly include a statement on the authority granted to MPCDs (also referred to as APCDs) that maintain adequate safeguards to collect, link, and disseminate substance use disorder records without patient consent for research purposes. Several commenters argued that many states have established state-sponsored MPCD systems and urged the proposed rule to specifically ensure substance use disorder data are not systematically excluded from state MPCD systems, allowing part 2 data to be collected, linked, and disseminated without patient consent for research purposes. A commenter requested specific guidance as to whether MPCDs could be lawful holders of part 2 data with the same disclosure requirements as those for HIEs. A commenter stated that the rule should authorize state data repositories such as an MPCD to link part 2 data to other data for research purposes.

SAMHSA Response

For an MPCD or any entity to disclose part 2 data for research purposes under the rule's research exception to consent requirements (§ 2.52), the entity must be a "lawful holder of patient identifying information." Under the research provision, any lawful holder of part 2 data may disclose the data to qualified researchers that meet the requirements under the HHS Common Rule or HIPAA Privacy Rule. As SAMHSA discussed in the NPRM preamble, a "lawful holder" of patient identifying information is an individual or entity who has received such information in accordance with the part 2 requirements, and, therefore, is bound by 42 CFR part 2. Examples of potential "lawful holders" of patient identifying information include a patient's treating provider, a hospital emergency room, an insurance company, an individual or entity performing an audit or evaluation, or an individual or entity conducting scientific research. As permitted by the authorizing statute and under these regulations, any lawful holder of patient identifying information may disclose part 2 data without patient consent for research purposes under the

circumstances specified under the research provision.

Regarding the specific scenario raised by commenters, SAMHSA wishes to clarify that MPCDs and other data intermediaries are permitted to obtain part 2 data under the research exception provided in § 2.52, provided that the conditions of the research exception are met. Furthermore, an MPCD or data intermediary that obtains part 2 data in this fashion would be considered a "lawful holder" under these final regulations and would therefore be permitted to redisclose part 2 data for research purposes, subject to the other conditions imposed under § 2.52. The final rule edits the language under paragraph 2.52(a) to clarify that the regulations do not prohibit such a disclosure.

Except as provided in paragraph 2.52(c), a researcher may not redisclose patient identifying information for data linkages purposes. SAMHSA's data linkages provision permits researchers to request to link data sets that include patient identifying information if the data linkages component is reviewed and approved by an IRB registered with OHRP in accordance with 45 CFR part 46 and certain other conditions are met. The data linkages provision is not intended to prohibit a researcher from linking a data set in the researcher's possession that contains part 2 data with a data set from a third-party source, so long as the part 2 data is not further disclosed in the data linkage process and any applicable confidentiality, privacy, and other conditions as specified in this rule are adhered to.

O. Audit and Evaluation (§ 2.53)

SAMHSA is modifying the proposed language as discussed below. SAMHSA has revised the section heading by deleting the word "activities." SAMHSA modernized this section to include provisions governing both paper and electronic patient records. In addition, we revised the requirements for destroying patient identifying information by citing the expanded Security for Records section (§ 2.16). Furthermore, we updated the Medicare or Medicaid audit or evaluation paragraph title to include Children's Health Insurance Program (CHIP) and, in subsequent language, refer to Medicare, Medicaid, and CHIP.

The § 2.53 revisions permit the part 2 program, not just the part 2 program director, to determine who is qualified to conduct an audit or evaluation of the part 2 program. The revised language also permits an audit or evaluation necessary to meet the requirements of a

CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE), under certain conditions, by better aligning the criteria in this section with those set forth in the Affordable Care Act (regulating ACOs, in part, at 42 U.S.C. 1395jjj). We have specified that such ACO or similar CMS-regulated entities must have in place administrative and/or clinical systems. While the NPRM indicated both types of systems were required, it has been noted that some ACO or similar CMS-regulated entities will not have both clinical and administrative systems. We also have clarified in the final rule that the ACO or similar CMS-regulated organization (including a CMS-regulated QE) is subject to periodic evaluations by, or receives patient identifying information from, CMS or its agents. To ensure that patient identifying information is protected, the ACO or similar CMS-regulated organization (including a CMS-regulated QE) that is the subject of, or is conducting, the audit or evaluation must have a signed Participation Agreement with CMS or similar documentation that demonstrates that the organization and its auditors or evaluators must conduct the audit and evaluation activities in full compliance with all applicable provisions of 42 U.S.C. 290dd-2 and 42 CFR part 2.

Public Comments

Several commenters provided comments with regard to § 2.53, Audit and Evaluation. A few commenters discussed the application of this section to Medicare and Medicaid. A couple of commenters recommended clarifying that Medicaid agencies are permitted under the QSO exception to disclose part 2 information to third-party payers for audit or evaluation purposes. These commenters also suggested that Medicaid and other third-party payers may use (third-party) contractors and vendors to assist beneficiaries and perform such activities as program integrity activities. The commenters argued that the QSO exception described above should include communications between third-party payers such as Medicaid agencies and other holders of part 2 data and QSOs to help ensure "operational efficiency." Another commenter suggested that the revisions concerning the auditing process and Participation Agreements would be too burdensome, and would be inconsistently applied because Medicare and Medicaid do not have to comply with the auditing requirements, whereas providers do. Further, a couple of commenters stated that part 2 programs would be confused in

attempting to decipher which organizations have Participating Agreements with CMS in place, further exacerbating the existing compliance issues with part 2. A commenter requested that SAMHSA clarify whether Medicaid program ACOs and external quality review organizations (EQRO) are considered “CMS-regulated” for the purposes of permitted disclosures. The commenter suggested that Medicaid program entities should be considered CMS-regulated entities.

SAMHSA Response

A QSO is an individual or entity that provides a service to a part 2 program consistent with a QSOA (*see* §§ 2.11, Definitions; 2.12(c)(4), Applicability). A QSOA is a two-way agreement between a part 2 program and the individual or entity providing the desired service. Therefore, to be a QSO, the contracted entity must be providing the service to a part 2 program. The QSOA authorizes communication only between the part 2 program and QSO. Third-party payers, such as Medicaid, are not considered part 2 programs as defined in this rule, and are not eligible to have QSO through a QSOA. That said, comments to the proposed rule raised questions that indicate that there may be varying interpretations of the current (1987) part 2 rule’s restrictions regarding the use of contractors/subcontractors in contexts other than the QSO context, such as the sharing of part 2 information by third-party payers with contractors and subcontractors to carry out activities related to audit and evaluation and program integrity, and we intend to address such scenarios with greater clarity in an SNPRM. As stated under § 2.12(a)(1), Restrictions on disclosures, the restrictions on disclosures in these regulations apply to any information, whether recorded or not, which would identify a patient as having or having had a substance use disorder either directly, by reference to publicly available information, or through verification of such information by another person. Patient identifying information that has been rendered non-identifiable in a manner that creates a very low risk of re-identification may be disclosed.

With regard to the concern that the proposed revisions to § 2.53 would be burdensome and create confusion when part 2 programs have to determine who has a Participation Agreement or similar documentation in place, CMS-regulated entities that, among other requirements, are subject to periodic evaluations by CMS or its agents, or are required by CMS to evaluate participants in the ACO or similar CMS-regulated

organization (including a CMS-regulated QE) relative to CMS-defined or approved quality and/or cost measures should be able to produce evidence that they have Participation Agreements or similar documentation in place with CMS if requested by a part 2 program.

As to whether Medicaid program ACOs and EQROs are considered “CMS-regulated,” this rule explicitly states that ACOs and similar organizations regulated by CMS may, subject to certain conditions, disclose or require participants in the organization to disclose part 2-covered information in order for the organization to meet CMS audit and evaluation requirements. Other entities may also be considered “CMS-regulated” depending on the particular circumstances, for example, as a result of their direct supervision by CMS, the establishment by CMS of regulations governing their conduct or qualification, or, in the case of Medicaid and CHIP-related entities, CMS’ approval of state plans or waivers and supervision of the state agencies. Medicaid program ACOs and EQROs do fit within the entities covered by the audit and evaluation provisions of the part 2 program. SAMHSA may further elaborate on this topic in subregulatory guidance issued following the publication of the final rule.

Public Comments

A few commenters provided input on SAMHSA’s proposal to permit audit or evaluation necessary to meet the requirements of a CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE), under certain conditions. A couple of commenters recommended that SAMHSA modify part 2 to permit CMS to provide all claims with substance use disorder treatment information through the Claim and Claim Line Feed (CCLF) file so patients can receive comprehensive, quality treatment and programs can operate more efficiently and effectively. The commenters suggested that because 42 U.S.C. 290dd-2(b)(2)(B) permits substance use disorder treatment program to disclose treatment records without the consent of the patient for the purpose of audits or evaluation; § 2.53 of the proposed rule also permits substance use disorder treatment programs to disclose treatment records to ACOs or other CMS-regulated organizations to allow the organizations to meet CMS’s audit and evaluation requirements for participation; therefore the provision could be expanded, or clarified, to also permit CMS to disclose substance use disorder treatment information to ACOs and bundled payment participants for

audit and evaluation activities. Another commenter expressed concern about the expansion of the part 2 audit and evaluation exception to include ACOs, because ACOs are continually “auditing” programs as a continual process of evaluating and monitoring and part 2’s language makes clear that an audit or evaluation is a time-limited activity that is not intended to permit ongoing access to program records. This commenter asserted that the part 2 audit and evaluation exception should not be allowed to result in a practice that circumvents the need to obtain a patient’s consent to access their information.

One commenter noted that CMS’s application of part 2 in its removal of substance use disorder treatment information from the monthly CCLF, in which CMS redacts any claim submitted by any provider where a substance use disorder is either the principal or secondary diagnosis, causes CMS to remove claims from the CCLF file that are not produced by federally assisted substance use disorder treatment programs. The commenter urged SAMHSA to work with CMS to develop a pathway to include substance use disorder treatment information in the CCLF data file.

SAMHSA Response

CMS may disclose patient identifying information to a CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE) for Medicare audit and evaluation purposes pursuant to § 2.53(c), which provides that “[p]atient identifying information, as defined in § 2.11, may be disclosed under paragraph (c) of this section to any individual or entity for the purpose of conducting a Medicare, Medicaid, or CHIP audit or evaluation. . . .” Neither the statute nor the part 2 regulations define audit or evaluation. However, under this section of the audit and evaluation exception, the purpose of the disclosure must be to conduct a Medicare, Medicaid, or CHIP audit or evaluation. This may include audit or evaluation activities, such as reviews of financial performance or the quality of health care services delivered, undertaken by the CMS-regulated organization itself to review its own performance. The exception does not cover any activities conducted by ACOs that may not be reasonably construed as being related to such a purpose.

Public Comments

Commenters provided other recommendations related to this section. A commenter suggested that § 2.53(d) should be revised to permit disclosure

of patient information to entities that have administrative control over auditors. Another commenter suggested that SAMHSA consider allowing “lawful holders” the ability to share information for audit and evaluation services, with the agreement that the service provider must adhere to part 2.

Another commenter recommended that SAMHSA convene a group of state, local, and provider representatives to develop draft guidance.

SAMHSA Response

Regarding the suggestion that § 2.53(d) should be revised to permit disclosure of patient information to entities that have administrative control over auditors, except as provided in § 2.53(c), patient identifying information disclosed under this section may be disclosed only back to the program from which it was obtained and used only to carry out an audit or evaluation purpose or to investigate or prosecute criminal or other activities, as authorized by a court order entered under § 2.66.

As recommended by a commenter, SAMHSA plans to develop and publish subregulatory guidance regarding the application of § 2.53 audit and evaluation disclosures after publication of this final rule.

P. Other Public Comments on the Proposed Rule

1. Requests To Extend the Public Comment Period

Public Comments

Several commenters requested extension to the public comment period. Commenters stated the complexity and importance of the rule warranted additional time for reflection and comment. A few commenters requested that the comment period be extended for one year to allow for a more open process. A couple of commenters suggested that in addition to extending the comment period for one year, public hearings also be held across the country.

SAMHSA Response

While SAMHSA recognizes that the issues addressed in the part 2 NPRM are complex and important, we concluded that the 60-day comment period was sufficient to provide the public a meaningful opportunity to comment, and this conclusion is supported by the hundreds of complex and thoughtful comments received. Additionally, the NPRM was available to the public for a preliminary review on the **Federal Register** Web site upon submission of the NPRM to the **Federal Register**, which was several days prior to publication, thereby providing

stakeholders additional time prior to the publication date. Finally, on June 11, 2014, SAMHSA held a public listening session and, invited through a **Federal Register** notice, general comments, as well as comments on six key provisions of 42 CFR part 2.

2. Rulemaking Process

Public Comments

One commenter expressed concern that SAMHSA did not summarize or address specific comments from stakeholders who participated in the public listening sessions.

Another commenter said that the part 2 changes should move forward but should be monitored and modified accordingly over the next two to three years.

SAMHSA Response

SAMHSA will undertake further rulemaking as necessary and intends to respond to issues raised with respect to the part 2 regulations, as they have in the past, through subregulatory guidance.

SAMHSA considered all comments received in the June 2014 public Listening Session on the part 2 regulations. As explained in the NPRM, feedback from the Listening Session was considered and helped to inform the development of the February 2016 NPRM (*see* 81 FR 6988, 6993). SAMHSA posted all comments received in response to the Listening Session **Federal Register** Notice on its Web site: <http://www.samhsa.gov/about-us/who-we-are/laws-regulations/public-comments-confidentiality-regulations>.

3. Implementation Timeline and Other Barriers to Implementation

Public Comments

To allay privacy concerns, a commenter said that SAMHSA should delay the proposed part 2 changes to further develop its Consent2Share application and encourage wider adoption. Similarly, a commenter recommended further testing and evaluation on IT solutions before issuing part 2 changes. This commenter further urged SAMHSA to address these issues in the final rule by specifically detailing a process for updating the Consent2Share tool so that its design specifications remain compatible with the rapidly advancing and very fluid EHR design landscape.

SAMHSA Response

SAMHSA declines to accept these recommendations to delay publication of a final rule pending technology developments or Congressional action.

Technology adoption is an ongoing process, and the majority of current EHR and HIE applications may not have the capability to support the DS4P initiative. In addition, paper records are still used today in some part 2 programs and shared through facsimile (FAX). In addition, SAMHSA's publication of a final rule would not prevent further Congressional action with respect to part 2.

Public Comments

One commenter expressed concern that applying electronic data segmentation in conjunction with patient privacy preferences can significantly increase the complexity of the workflow process and have unintended consequences on system performance and response times at the point of care. The commenter recommended that SAMHSA, in conjunction with other federal agencies, advisory bodies, such as the National Committee on Vital and Health Statistics (NCVHS), and public and private stakeholders should convene public discussions to evaluate the possibility of data segmentation standards in electronic systems, the benefits and potential unintended consequences that may result, along with the associated costs and anticipated consumer uses of such standards and processes.

In addition to the technical challenges, a commenter said that SAMHSA should recognize other barriers to implementation of part 2 changes, including complexity in navigating individual state regulations, challenges around mapping to clinical codes, and lack of a standardized service discovery mechanism to ensure capability of exchanging systems to evaluate the ability to receive and interpret a tagged document.

SAMHSA Response

SAMHSA recognizes the concerns expressed by the commenter; however, SAMHSA's jurisdiction is limited to those regulations over which it has authority. We note that the part 2 regulations permit, but do not require, data segmentation.

4. Educational Opportunities

Public Comments

Some commenters urged SAMHSA to provide trainings/webinars and technical assistance after the final rule is adopted so that substance use disorder providers, other health care providers, and patients will understand the changes to ensure compliance with the rule. Expressing concern that many people will not understand the idea of

an HIE or a registry, one commenter suggested creating paid space for a nurse visit to walk a consumer through the consent.

A few commenters encouraged SAMHSA to invest in provider and patient education efforts on the value of integrated care, the role of information sharing in enabling integrated care, how the consent process works, patient rights under 42 CFR part 2, and the implications of providing consent to share personal health information.

A commenter encouraged SAMHSA to continue its efforts to provide guidance as to how part 2's requirements can be incorporated into HIE systems, suggesting that many of the perceived part 2 issues can be resolved by proper education regarding the actual requirements and how information can be exchanged pursuant to part 2 with little, if any, additional effort if proper operational practices are utilized by health care providers and management organizations.

One commenter suggested that SAMHSA establish a consumer engagement committee or seek input from an existing national consumer advisory council to support part 2 programs in complying with certain areas of the rule, such as developing user-friendly consent forms and crafting educational materials for patients. One commenter suggested that SAMHSA contract with the Legal Action Center to create a webinar or FAQ to provide guidance to community health centers and other "multi-use" organizations as to the applicability of part 2.

Another commenter recommended that SAMHSA develop educational materials targeted at pharmacists because of the pharmacy profession's growing role in substance use disorder treatment.

SAMHSA Response

SAMHSA appreciates these comments on educational opportunities and plans to address specific commenter requests in subregulatory guidance after the publication of the final rule. SAMHSA will consider additional educational activities, such as trainings, webinars, and establishing engagement committees, should SAMHSA determine the need during implementation of the final rule.

5. Increased Enforcement

Public Comments

Some commenters urged SAMHSA to ensure that part 2 provides for meaningful enforcement and penalties, with a few reasoning that the rule would create new avenues for the exchanges of

patients' substance use disorder information, especially to other parts of the health care system that may have little to no experience treating substance use disorder or complying with part 2. One of these commenters asserted that fines imposed for part 2 violations are so minimal that they are not a deterrent to intentional or accidental violations. A commenter suggested that SAMHSA adopt the HIPAA penalties contained in the HITECH Act and specify that any disclosures of information in violation of this statute must be excluded from evidence and deemed inadmissible for use in any administrative, civil, or criminal proceeding.

Urging SAMHSA to review and correct the enforcement concerns of the underlying statute, one commenter argued that the current confidentiality obligations have questionable enforcement authority because there is no express provision in Title 18 pertaining to the confidentiality of drug and alcohol treatment records. Although the original part 2 underlying statute set forth specific fines, the commenter explained that a subsequent revision (by Pub. L. 102-321) eliminated the fines leaving only a reference to Title 18. Moreover, the commenter said that by the proposed transfer of the existing enforcement authority from FDA to SAMHSA, the proposed rule appears to remove enforcement authority that actually exists to a potential state of unenforceability. Similarly, another commenter stated that SAMHSA does not have legislative authority to impose penalties for disclosure. No mention of privacy law violation fines, penalties, or offenses exist in Title 18. Thus, the current confidentiality obligations have no enforcement authority. The commenter stated that entities receiving unauthorized information would likely not be subject to penalties unless a common law breach of privacy lawsuit is filed.

SAMHSA Response

The Department of Justice is responsible for enforcing violations of 42 CFR part 2 in accordance with Title 18 of the United States Code. Title 42 U.S.C. 290dd-2 provides that "[a]ny person who violates any provision of [the] section or any regulation issued pursuant to [the] section shall be fined in accordance with title 18." Reports of violation of the regulations may be directed to the United States Attorney's Office (USAO) for the judicial district in which the violation occurs or may be directed to SAMHSA for possible referral to the relevant USAO. A report of any violation of these regulations by an opioid treatment program may be

directed to the relevant USAO as well as the SAMHSA office for opioid treatment program oversight, pursuant to 42 CFR part 8.

6. Other Miscellaneous Comments on the Proposed Rule

Public Comments

A commenter suggested that SAMHSA revise the title of part 2 to "Confidentiality of Patient Records Relevant to Substance Use Disorders and Associated Behavioral Diagnoses," to ensure person-centered language is used.

SAMHSA Response

To be consistent with recognized classification manuals, current diagnostic lexicon, and commonly used descriptive terminology, SAMHSA proposed to refer to alcohol abuse and drug abuse collectively as "substance use disorder," and, for consistency, proposed to revise the title of 42 CFR part 2 from "Confidentiality of Alcohol and Drug Abuse Patient Records" to "Confidentiality of Substance Use Disorder Patient Records."

Public Comments

Some commenters made specific suggestions or requested clarification regarding parts of the part 2 regulations that were not the subject of the proposed changes in the NPRM. For example, commenters addressed §§ 2.14 (Minor patients), 2.20 (Relationship to state laws), and 2.21 (Relationship to federal statutes protecting research subjects against compulsory disclosure of their identity).

SAMHSA Response

SAMHSA acknowledges commenters' questions and suggestions relating to all aspects of the part 2 regulations. However, for purposes of this final rule, SAMHSA generally considered comments submitted on provisions for which changes were not proposed in the February 2016 NPRM to be outside of the scope of this rulemaking. SAMHSA will take such comments and recommendations under advisement and may issue subregulatory guidance in the future to address some of these issues brought up by commenters.

Public Comments

Another commenter also urged SAMHSA to work with CMS to ensure that when proper criteria are met, such as through a QSOA and/or a signed consent form, patient substance use claim information is available to ACOs through their CCLF files. Asserting that it is a major blind spot in the ability of an ACO to manage total care if it does

not have data on substance use disorder data, a commenter encouraged SAMHSA to work with CMS on ways to effectively manage substance use disorder care within the administration of the ACO program. One commenter suggested that SAMHSA work with federal agencies, states, localities, and providers to identify the cost/burden of the rule on entities and professionals. The commenter also recommended that SAMHSA work with the CMS and the Office of the National Coordinator for Health Information Technology (ONC) to align the rule with guidance permitting the HITECH enhanced funding for administrative costs to other providers.

SAMHSA Response

SAMHSA will continue to work with CMS and its other federal partners to ensure the effective and timely implementation of the part 2 final rule.

Public Comments

Because a state provides health care, including federally funded substance use disorder treatment programs, to inmates in the state jail system, a commenter stated that the part 2 regulations impact the methods by which care is coordinated for inmates and urged SAMHSA to consider part 2's impact on incarcerated populations.

SAMHSA Response

SAMHSA considered how the regulations would impact part 2 programs and lawful holders of patient identifying information, as well as other stakeholders. All part 2 programs and other lawful holders of patient identifying information must comply with part 2. If a jail or prison meets the definition of a part 2 program, it would be required to comply with part 2.

Public Comments

One commenter stated that there should be an option for the patient to have the ability to remove their substance use disorder history from their medical record after a ten-year minimum time period.

SAMHSA Response

Although SAMHSA is not prescribing any specific retention period, the expectation is the both paper and electronic records would comply with applicable federal, state, and local retention laws.

Public Comments

A commenter requested that SAMHSA provide a description of 42 CFR part 2-covered entities similar to the designation under HIPAA.

SAMHSA Response

SAMHSA may address applicability in subregulatory guidance or in subsequent rulemaking.

VI. Rulemaking Analyses

A. Paperwork Reduction Act

Under the Paperwork Reduction Act of 1995 (PRA), agencies are required to provide a 60-day notice in the FR and solicit public comment before a collection of information requirement is submitted to the Office of Management and Budget (OMB) for review and approval. We provided for this comment period as part of the NPRM. The part 2 information collections are approved under OMB Control No. 0930-0092, and SAMHSA will shortly submit the changes associated with this rule to OMB for review.

This rule includes changes to information collection requirements, that is, reporting, recordkeeping or third-party disclosure requirements, as defined under the PRA (5 CFR part 1320). Some of the provisions involve changes from the information collections set out in the previous regulations. Information collection requirements are: (1) Section 2.13(d)—Disclosure: Requires entities named by patients using general designation under § 2.31(a)(4)(iv)(C) to provide a list of entities to which the patient's information has been disclosed to participants pursuant to the general designation, (2) Section 2.22—Disclosure: Requires each program notify each patient that federal law and regulations protect the confidentiality of substance use disorder patient records and provide a written summary of the effect of this law and these regulations, (3) Section 2.51—Recordkeeping: This provision requires the program to document a disclosure of a patient record to authorized medical personnel in a bona fide medical emergency as defined in § 2.51. The regulation is silent on retention period for keeping these records as this will vary according to state laws. It is expected that these records will be kept as part of the patients' health records. The major change from current (1987) regulations is the list of disclosures requirement at Section 2.13(d). SAMHSA proposed that entities named on a consent form that

disclose patient identifying information to their participants under the general designation must provide patients, upon request, a list of entities to which their information has been disclosed pursuant to a general designation (*i.e.*, list of disclosures). Impact of this provision is noted below. SAMHSA notes that entities are not required to use the general designation permitted under § 2.31(a)(4)(iii)(B)(3)(i).

Under the PRA, the time, effort, and financial resources necessary to meet the information collection requirements referenced in this section are to be considered in rulemaking. The NPRM solicited comments on PRA issues. Commenters did not raise concerns regarding the burden for information collection requirements for the recordkeeping and notification provisions above. Though commenters expressed concern about some aspects of the list of disclosures requirements, these comments did not suggest that the burden of information collection would increase for 42 CFR part 2-compliant entities. Indeed, one commenter noted that current practice for many facilities to maintain both paper and electronic records may be both burdensome and inefficient. By promoting use of EHRs, changes in this rule may help to improve efficiency for providers. Some commenters also hypothesized that complying with the list of disclosures requirement would require such steps as developing a tracking system; or manual review or audit of all records; and mailing of letters through U.S. mail. Entities should already be collecting and retaining information needed to comply with the list of disclosures requirement. The final rule does not impose requirements to manually review all records, mail letters using the U.S. Postal Service or develop a tracking system specifically to comply with the list of disclosures provisions. For instance, we note below that entities could comply with the List of Disclosures requirement by either collecting this information electronically by using audit logs to obtain the required information or by keeping a paper record. Similarly, we point out that list of disclosures may be transmitted through such methods as mail or email or through other means preferred by the patient. We discuss the list of disclosures requirements further in the impact analysis section below.

Annual burden estimates for these requirements are summarized in the table below:

TABLE 2—ANNUAL BURDEN ESTIMATES

	Annual number of respondents	Responses per respondent	Total responses	Hours per response	Total hour burden	Hourly wage cost	Total cost
Disclosures							
42 CFR 2.13 (d)	¹ 19,548	1	19,548	² 4.15	81,124	³ \$36.9175	\$2,995,000
42 CFR 2.22	⁴ 12,034	155	⁵ 1,861,693	.20	372,338.6	⁶ 40.26	14,990,000
Recordkeeping							
42 CFR 2.51	12,034	2	24,068	.167	4,019	⁷ 34.16	137,000
Total	⁸ 31,582		1,905,309		457,482		18,123,000

¹ The number of entities required to generate a list of disclosures based on the number of estimated patient requests. Patient requests are based the total number of annual treatment admissions from SAMHSA's 2010–2012 Treatment Episode Data Set (TEDS) (see footnote 5). The estimated patient requests equal the average of the total number of requests for a 0.1 percent request rate and a 2 percent request rate. SAMHSA notes that this estimate reflects the number of patient requests rather than the number of impacted entities as some entities may receive more than one request.

² The estimated time for developing a list of disclosures is 4 hours for entities collecting the information electronically using an audit log and 3 hours for entities that produce such a list from paper records. Because 90 percent of entities are estimated to collect the information electronically using an audit log and 10 percent are estimated to use paper records, the average weighted time to develop a list of disclosures is 3.9 hours [(0.9 × 4 hours) + (0.1 × 3 hours)]. Including the estimated 15 minutes to prepare each list of disclosures for mailing or transmitting, the total estimated time for providing a patient a list of disclosures is 4.15 hours (3.9 hours + 0.25 hours).

³ The weighted hourly rate for health information technicians, medical technicians and administrative staff who will be preparing the list of disclosures. The hourly rate is weighted to reflect the fact that health information and medical technicians, who will be generating the list of disclosures, have a higher wage rate than administrative staff and will contribute more hours to generating the list of disclosures. Bureau of Labor Statistics, U.S. Department of Labor, *Occupational Employment Statistics* [accessed June 3, 2015], Standard Occupations Classification codes (29–2071, 31–9092) [www.bls.gov/oes/]. The hourly wage rate was multiplied by 2 to account for benefits and overhead costs.

⁴ The number of publicly funded alcohol and drug facilities based on SAMHSA's 2013 National Survey of Substance Abuse Treatment Services (N–SSATS). The estimated annual number of respondents, 12,034, is based on N–SSATS data and reflects facilities receiving federal funding. However, under N–SSATS an organization may complete survey responses for multiple facilities.

⁵ The average number of annual treatment admissions from SAMHSA's 2010–2012 TEDS.

⁶ Bureau of Labor Statistics, U.S. Department of Labor, *Occupational Employment Statistics* [accessed July 16, 2015], Standard Occupations Classification code (21–1011) [www.bls.gov/oes/]. The hourly wage rate was multiplied by 2 to account for benefits and overhead costs.

⁷ Bureau of Labor Statistics, U.S. Department of Labor, *Occupational Employment Statistics* [accessed July 16, 2015], Standard Occupations Classification code (43–0000) [www.bls.gov/oes/]. The hourly wage rate was multiplied by 2 to account for benefits and overhead costs.

⁸ The combined total of the number of publicly funded alcohol and drug facilities and the number of entities required to generate a list of disclosures.

As described in greater detail in Section VI.B, Regulatory Impact Analysis, the respondents for the collection of information under § 2.22 and 2.51 are publicly (federal, state, or local) funded, assisted, or regulated substance use disorder treatment programs. The estimate of the number of such programs (respondents) is based on the results of the 2013 N–SSATS, and the average number of annual total responses is based on 2010–2012 information on patient admissions reported to the Treatment Episode Data Set (TEDS), approved under OMB Control No. 0930–0106 and OMB Control No. 0930–0335.

The respondents for the collection of information under § 2.13(d) are entities named on the consent form that disclose information to their participants pursuant to the general designation. These entities primarily would be organizations that facilitate the exchange of health information (e.g., HIEs) or coordinate care (e.g., ACOs, CCOs, and CPCMHs), but other organizations, such as research institutions, also may disclose patient identifying information to their participants (e.g., clinical researchers) pursuant to the general designation on the consent form. Because there are no definitive data sources for this potential range of organizations, we are not associating requests for a list of disclosures with any particular type of

organization. Consequently, the number of organizations that must respond to list of disclosures requests is based on the total number of requests each year.

B. Regulatory Impact Analysis

1. Public Comments on Notice of Proposed Rulemaking Regulatory Impact Analysis

a. Support for Cost Estimates Public Comments

SAMHSA received roughly 376 comments on the proposed rule. However, relatively few comments focused on the Regulatory Impact Analysis. We respond to these comments below and have made changes in our analysis, when appropriate, to reflect these comments.

A few commenters suggested that the estimated costs outlined by SAMHSA in the proposed rule are in line with actual costs. For instance, one commenter suggested that the estimated total cost of \$239 million over 10 years would not be unduly burdensome and would improve patient care and safety. A commenter stated that costs would be minimal for integrating the requirement properly to sanitize and dispose of records into training and instruction. Another commenter stated that the costs related to modifying release forms and training staff would be absorbed by organizations and would not impact business processes. Explaining that in

order to reflect the revision in title of 42 CFR part 2, a modification of the printed and on-line versions of applicable CFR Titles would be necessary, a commenter concluded that because of regular updates to CFRs, the incorporation of amendments made as part of this rule should not result in a significant economic impact.

SAMHSA Response

SAMHSA acknowledges and appreciates the comments received that expressed support for the cost estimates in the NPRM. Though SAMSHA does not attempt in this rule to quantify benefits, it is important to note that updates to 42 CFR part 2 may result in long-term cost savings as well due to improved care coordination and integration and more efficient use of data for research and performance improvement purposes.

b. Assertions That SAMHSA Underestimated Costs

Public Comments

Some commenters generally asserted that the compliance and implementation costs were underestimated. One commenter suggested that cost effectiveness of complying with the proposed regulation will impact members and patients because of the additional costs associated with implementation (e.g., outreach and education, changes to

consent forms), which undermines care coordination and effective delivery of services. Another commenter suggested that the projected costs of complying with part 2 should include costs for other institutions that are affected with re-disclosure of the provision; costs to individual practitioners or health organizations with few clinicians that fall under part 2; vendor-related costs; costs for software development and upgrades should be added to the costs of electronic record purchase and maintenance; cost to HIE; and costs to hire administrative staff.

A few commenters suggested that the estimated \$8,000 cost per facility to implement consent management was too low, failing to reflect fully development, testing and process costs. One commenter suggested that the estimated \$8,000 cost per facility to implement consent management likely does not consider vendor-related costs such as development, testing, training, adoption and process modifications that may need to occur, only the cost of the infrastructure investment. Commenters urged SAMHSA and federal partners to consider funding HIT adoption by behavioral health providers. Another commenter stated that the proposed rule underestimated the cost of scaling efforts to integrate DS4P and Consent2Share, including upgrades and iterations across EHR products. Commenters also suggested SAMHSA modify its DS4P efforts to reflect updated 42 CFR part 2 requirements. Lastly, a commenter suggested that the estimate of \$8,000 to comply with the proposal underestimates the costs for existing pharmacy management systems to add new functionality and applications and does not include other software or security requirements, training, or other implementation costs associated with the proposed rule. Another commenter generally suggested that the estimated cost burden of transitioning to a new consent form will be greater than proposed in the proposed rule.

Several commenters mentioned other specific areas in which SAMHSA underestimated costs. One commenter suggested that the costs estimated related to EHR customizations are underestimated because there is no current standard interoperability within EHRs that address part 2 information. Another commenter also shared their own experience in which they estimated a cost of \$30,000 to comply with 42 CFR part 2 when including 2 substance use specialists as part of an integrated treatment model using an electronic health record. This commenter asserted based on their own experience that if

small entities attempt to develop integrated substance use disorder treatment programs they may face similar costs, including information technology time and efforts to modify EHRs to include restrictions on sharing of 42 CFR part 2 information in an integrated setting prohibitive. Another commenter stated that time, resources and training would be required to implement proposed changes to §§ 2.12, 2.31, and 2.32, and that personnel and financial constraints are common within the health care industry. The commenter estimated that the ability to adapt currently used electronic health records to segregate certain patient information will also take considerable effort and time. A commenter stated that the proposed cost analysis associated with staff training is inaccurate because it assumes that only substance use disorder counselors would need training when, in actuality, other fields would also need to be trained because they could potentially become lawful holders of the patient information (e.g., social work, psychology, medicine, managed care, HIE, research organizations). The commenter added that additional work will be needed to redact patient records to be in compliance with the data sharing elements related to information that could identify a patient as a substantive abuse disorder patient. A commenter stated that the cost to organizations to comply with the requirement for U.S. mail transmissions will be significant.

SAMHSA Response

Though commenters suggested anecdotally that SAMHSA underestimated the burden of 42 CFR part 2-compliance, SAMHSA notes the availability of data segmentation tools such as Consent2Share, an open source tool for consent management that is compliant with 42 CFR part 2. As noted above (in Section V.J.1.c), SAMHSA will be shortly releasing an updated version of Consent2Share with improved functionality and ability to meet the list of disclosures requirements. Provided that a facility already is using electronic health records and can partner with a health information exchange using Consent2Share or similar software, SAMHSA believes based on current efforts to pilot an updated version of Consent2Share that a cost of between \$6,000 and \$10,000 is reasonable. At the individual clinic level, initial set-up, training and testing are expected to constitute the main expenses. D4SP, Consent2Share, and similar tools make it feasible for entities to comply with updated 42 CFR part 2 requirements at reasonable cost.

While we acknowledge comments that entities other than those directly subject to this rule may be impacted by its provisions, including vendors of EHR products, such impacts are outside the scope of the regulation. We do not mandate vendors to perform additional activities. Nonetheless, SAMHSA will monitor such impacts and, to the extent feasible, work with stakeholders and federal partners to develop fact sheets and other materials to assist in outreach to patients and others about changes made in this rule. Likewise, while SAMHSA is unable to directly fund updates to EHRs, SAMHSA continues to work closely with ONC and others to ensure inclusion of behavioral health providers in ongoing information technology programs (See <http://www.samhsa.gov/health-information-technology/samhsas-efforts>; <https://www.healthit.gov/policy-researchers-implementers/behavioral-health>).

We acknowledge that the cost of updating consent forms may be greater than we had proposed and have made changes to our cost estimates in this final rule to reflect the need to update forms to meet new requirements. We note that most of these costs may only need to be incurred once and in the past some organizations have made sample template forms and materials available (See e.g., <http://lac.org/resources/substance-use-resources/confidentiality-resources/sample-forms-confidentiality/>). SAMHSA may, at a future time, develop sample templates and forms to ease compliance costs.

c. Other Comments on Costs

Public Comments

Some commenters said existing functionalities within EHR systems and consent management tools do not easily separate or redact substance use disorder information from general medical information when such systems are shared across an integrated health system. Similarly, commenters expressed concern that the proposed rule could have the opposite effect of its intended purpose by causing HIEs to exclude part 2 information from information exchanges entirely since most HIEs and EHRs today do not support data segmentation. Asserting that the proposed part 2 changes would require HIEs to create an architecture for data management that provides for the segmentation of substance use disorder and general behavioral health data from physical health care data, including a way to have consent operate differently in each of the environments, one commenter asserted that this is a costly challenging administrative burden that

does nothing to promote the sharing of information between all necessary providers for the integration of coordination of care.

A commenter suggested that the financial burden of the proposed rule would vary depending on the size or complexity of the covered entity.

Another commenter asserted that the rule should not be adopted because it would result in increased health care costs. The commenter stated that SAMHSA is not able to estimate additional costs that are likely to occur when adding sensitive substantive abuse disorder treatment information of patients to electronic health information systems without patient consent (*e.g.*, additional security, costs related to breaches, class action lawsuits for breached information, and loss of business due to breaches). The commenter concluded that, because these costs do not provide additional substance use disorder or health care services, and instead remove dollars from health care services, the proposed rule is in conflict with SAMHSA's proposed goal of reducing unnecessary health care costs.

SAMHSA Response

SAMHSA agrees that costs may vary based on an institution's size, complexity and patient population served. However, we anticipate that over time compliance costs will drop significantly as institutions implement initial compliance efforts. SAMHSA notes that EHRs already are widely used in many health care settings with no evidence of class action lawsuits, loss of business or other speculative impacts (see *e.g.*, <http://dashboard.healthit.gov/quickstats/quickstats.php>). Though SAMHSA is concerned about health care costs, the use of EHRs is likely both to improve care and reduce costs over time. Changes made in this rule will help to support EHR adoption and integration of care. Though in general EHR adoption among behavioral health providers lags behind that of other health care providers, forthcoming N-SSATS data reflect that more than 25 percent of surveyed substance use disorder treatment facilities used EHRs only and more than half use EHRs and paper-based records. Such growing adoption by substance use disorder treatment facilities reflects that EHR use is consistent with good quality of care and 42 CFR part 2 compliance.

2. Statement of Need

This final rule reflects changes in the health care system and behavioral health, such as the increasing use of electronic health records and drive

toward greater integration of physical and behavioral health care. Despite efforts to enhance integration and coordination of care, however, it remains important to ensure persons seeking treatment for substance use disorders can remain confident as to the safeguarding of their medical information. This rule updates 42 CFR part 2 to balance these important needs.

3. Overall Impact

SAMHSA examined the impacts of this final rule as required by Executive Order 12866 on Regulatory Planning and Review (September 30, 1993), Executive Order 13563 on Improving Regulation and Regulatory Review (January 18, 2011), the Regulatory Flexibility Act (RFA) (September 19, 1980, Pub. L. 96–354), Section 1102(b) of the Social Security Act, section 202 of the Unfunded Mandates Reform Act of 1995 (March 22, 1995; Pub. L. 104–4), Executive Order 13132 on Federalism (August 4, 1999) and the Congressional Review Act (5 U.S.C. 804(2)). Executive Orders 12866 and 13563 direct agencies to assess all costs and benefits of available regulatory alternatives and, if regulation is necessary, to select regulatory approaches that maximize net benefits (including potential economic, environmental, public health and safety effects, distributive impacts, and equity). Section 3(f) of Executive Order 12866 defines a “significant regulatory action” as an action that is likely to result in a rule: (1) Having an annual effect on the economy of \$100 million or more in any one year, or adversely and materially affecting a sector of the economy, productivity, competition, jobs, the environment, public health or safety, or state, local or tribal governments or communities (also referred to as “economically significant”); (2) creating a serious inconsistency or otherwise interfering with an action taken or planned by another agency; (3) materially altering the budgetary impacts of entitlement grants, user fees, or loan programs or the rights and obligations of recipients thereof; or (4) raising novel legal or policy issues arising out of legal mandates, the President's priorities, or the principles set forth in the Executive Order.

A regulatory impact analysis must be prepared for major rules with economically significant effects (\$100 million or more in any one year). This rule does not reach the economic threshold and thus is not considered to be an economically significant rule. However, because this rule raises novel policy issues arising out of legal

mandates, the rule is considered “a significant regulatory action,” this regulatory impact analysis has been prepared, and the rule has been reviewed by OMB.

When estimating the total costs associated with changes to the 42 CFR part 2 regulations, we assumed five sets of costs: updates to health IT systems costs, costs for staff training and updates to training curriculum, costs to update patient consent forms, costs associated with providing patients a list of entities to which their information has been disclosed pursuant to a general designation on the consent form (*i.e.*, the List of Disclosures requirement), and implementation costs associated with the List of Disclosures requirements. We assumed that costs associated with modifications to existing health IT systems, staff training costs associated with updating staff training materials, and costs to update consent forms would be one-time costs the first year the final rule is in effect and would not carry forward into future years. Staff training costs other than those associated with updating training materials were assumed to be ongoing annual costs to part 2 programs, also beginning in the first year that the final rule is in effect. The List of Disclosures costs were assumed to be ongoing annual costs to entities named on a consent form that disclose patient identifying information to their participants under the general designation. In the NPRM, SAMHSA proposed to require non-treating providers to implement the List of Disclosures requirement at any time, but they cannot use the general designation without being able to provide a List of Disclosures. Therefore, we assumed that starting in year 1 ten percent of entities would decide to implement each year, resulting in 100 percent of entities implementing by year 10. We note that it is possible that some entities will never implement this requirement and choose to forego use of the general designation.

We estimated, therefore, that in the first year that the final rule is in effect, the total costs associated with updates to 42 CFR part 2 will be about \$70,691,000. In year two, we estimate that costs will be roughly \$17,680,000 and increase annually as a larger share of entities implement List of Disclosures requirements and respond to disclosure requests. Over the 10-year period of 2016–2025, the total undiscounted cost of the part 2 changes will be about \$241 million in 2016 dollars. When future costs are discounted at 3 percent or 7 percent per year, the total costs become approximately \$217,586,000 or

\$193,098,000, respectively. These costs are presented in the tables below.

TABLE 3—TOTAL COST OF 42 CFR PART 2 REVISIONS

[Note: Numbers may not add due to rounding]

[Note that all costs presented in this analysis are rounded to avoid communicating inaccurate levels of precision]

Year	Staff training costs	Consent form updates	List of disclosures	Health IT costs	Total costs
[2016 dollars]					
	(A)	(B)	(C)	(D)	(E)
2016	\$15,521,000	\$2,104,000	\$4,930,000	\$48,136,000	\$70,691,000
2017	12,438,000	0	5,242,000	0	17,680,000
2018	12,438,000	0	5,554,000	0	17,992,000
2019	12,438,000	0	5,866,000	0	18,304,000
2020	12,438,000	0	6,178,000	0	18,616,000
2021	12,438,000	0	6,490,000	0	18,928,000
2022	12,438,000	0	6,802,000	0	19,240,000
2023	12,438,000	0	7,114,000	0	19,552,000
2024	12,438,000	0	7,426,000	0	19,864,000

TABLE 4—TOTAL COST OF 42 CFR PART 2 REVISIONS—ANNUAL DISCOUNTING

[Note: Numbers may not add due to rounding]

Year	Total costs	Total with 3% annual discounting	Total with 7% annual discounting
[2016 dollars]			
	(E)	(F)	(G)
2016	\$70,691,000	\$70,691,000	\$70,691,000
2017	17,680,000	17,165,000	16,523,000
2018	17,992,000	16,959,000	15,715,000
2019	18,304,000	16,751,000	14,941,000
2020	18,616,000	16,540,000	14,202,000
2021	18,928,000	16,327,000	13,495,000
2022	19,240,000	16,113,000	12,820,000
2023	19,552,000	15,897,000	12,176,000
2024	19,864,000	15,681,000	11,561,000
2025	20,176,000	15,463,000	10,974,200
Total	241,040,000	217,586,000	193,098,000
Annualized	25,507,717.01	27,492,811.02

Note: Numbers may not add due to rounding.

The costs associated with the proposed revisions stem from staff training and updates to training curriculum, updates to patient consent forms, compliance with the List of Disclosures requirement (including implementation costs), and updates to health IT infrastructure for information exchange. Based on data from the 2013 N-SSATS, we estimated that 12,034 hospitals, outpatient treatment centers, and residential treatment facilities are covered by part 2. N-SSATS is an annual survey of U.S. substance use disorder treatment facilities. Data is collected on facility location, characteristics, and service utilization. Not all treatment providers included in N-SSATS are believed to be under the jurisdiction of the part 2 regulations.

The 12,034 number is a subset of the 14,148 substance use disorder treatment facilities that responded to the 2013 N-SSATS, and includes all federally operated facilities, facilities that reported receiving public funding other than Medicare and Medicaid, facilities that reported accepting Medicare, Medicaid, TRICARE, and/or Access to Recovery (ATR) voucher payments, or were SAMHSA-certified Opioid Treatment Programs. If a facility did not have at least one of these conditions, it was interpreted not to have received any federal funding and, therefore, not included in the estimate. The estimated annual number of respondents, 12,034, is based on N-SSATS data and reflects facilities receiving federal funding. However, under N-SSATS an

organization may complete survey responses for multiple facilities it oversees. Thus, an organization with three facilities may complete three separate surveys.

If an independently practicing clinician does not meet the requirements of paragraph (1) of the definition of Program they may be subject to 42 CFR part 2 if they constitute an identified unit within a general medical facility which holds itself out as providing, and provides, substance use disorder diagnosis, treatment, or referral for treatment or if their primary function in the facility or practice is the provision of such services and they are identified as providing such services. Due to data limitations, it was not possible to estimate the costs

for independently practicing providers covered by part 2 that did not participate in the 2013 N-SSATS. For example, data from American Board of Addiction Medicine (ABAM) provides the number of physicians since 2000 who have active ABAM certification. However, there is no source for the number of physicians who have not participated in the ABAM certification process. In addition, it is not possible to determine which ABAM-certified physicians practice in a general medical setting rather than in a specialty treatment facility that was already counted in the N-SSATS data.

Several provisions in the NPRM referenced “other lawful holders of patient identifying information” in combination with part 2 programs. These other lawful holders must comply with part 2 requirements with respect to information they maintain that is covered by part 2 regulations. However, because this group could encompass a wide range of organizations, depending on whether they received part 2 data via patient consent or as a result of one of the limited exceptions to the consent requirement specified in the regulations, we are unable to include estimates regarding the number and type of these organizations and only included part 2 programs in this analysis.

In addition to the part 2 programs described above, SAMHSA proposed that entities named on a consent form that disclose patient identifying information to their participants under the general designation must provide patients, upon request, a list of entities to which their information has been disclosed pursuant to a general designation (*i.e.*, list of disclosures). These entities primarily would include organizations that facilitate the exchange of health information (*e.g.*, HIEs), and may also include organizations responsible for care coordination (*e.g.*, ACOs, CCOs, and CPCMHs). The most recent estimates of these types of entities are 67 functional, publicly funded HIEs and 161 functional, privately funded HIEs in 2013.¹ As of January 2015, there were an estimated 744 ACOs covering approximately 23.5 million individuals.² Finally, the National Committee for Quality Assurance (NCQA) recently noted that there are now more than 10,000 NCQA-recognized CPCMHs.³ While these types of organizations were the primary focus of this provision on the consent form, other types of entities, such as research institutions, may also disclose patient identifying information to their participants (*e.g.*, clinical researchers) pursuant to the general designation on

the consent form. Because there are no definitive data sources for this potential range of organizations, we are not associating requests for lists of disclosures with any particular type of organization. We, instead, estimate the number of organizations that must respond to list of disclosures requests based on the total number of requests each year.

a. Direct Costs of Implementing the Proposed Regulations

There is no known baseline estimate of the current costs associated with 42 CFR part 2-compliance. However, as reflected by commenters who requested alignment between HIPAA and 42 CFR part 2, HIPAA authorization and notification requirements have similarities to requirements of 42 CFR part 2 (see <http://www.hhs.gov/hipaa/for-professionals/privacy/index.html>). Instead, therefore, in the absence of data and studies specifically focused on compliance with 42 CFR part 2, SAMHSA has estimated these costs based on a range of published costs associated with HIPAA implementation and compliance.^{4,5}

i. Staff Training

Because SAMHSA lacks specific data regarding the cost of staff training to comply with 42 CFR part 2, SAMHSA has examined analogous HIPAA implementation costs. A Standard HIPAA training that meets or exceeds the federal training requirements is, on average, one hour long.⁶ Therefore, we also estimated one hour of training per staff to achieve proficiency in the 42 CFR part 2 regulations. To estimate the labor costs associated with staff training, we averaged the average hourly costs for counseling staff in specialty treatment centers (\$20.33⁷), hospital treatment centers (\$21.80⁸), and solo practice offices (\$24.67¹⁹). The resulting average wage rate was \$22.27 per hour. In order to account for benefits and overhead costs associated with staff time, we multiplied the average hourly wage rate by two. These estimates were only for training costs associated with counseling staff, who we assume will have primary responsibility for executing the functions associated with the part 2 revisions.

It is important as well to note that many current staff already have familiarity with current (1987) 42 CFR part 2 requirements. With regard to training materials, most part 2 programs are assumed to already have training curricula in place that covers current (1987) 42 CFR part 2 regulations, and, therefore, these facilities would only need to update existing training

materials rather than develop new materials. Part 2 entities may determine the content of this training. The American Hospital Association estimated that the costs for the development of Privacy and Confidentiality training, which would include the development of training materials and instructor labor costs, was \$16 per employee training hour in 2000.¹⁰ Because we assumed that part 2 programs would be updating existing rather than developing entirely new training materials, we estimated the cost of training development to be one-half of the cost of developing new materials, or \$8 per employee. Adjusted for inflation,¹¹ training development costs in 2016 would be \$11.04 per employee.

Using SAMHSA's 2010–2012 TEDS average annual number of treatment admissions ($n=1,861,693$) as an estimate of the annual number of patients at part 2 programs and calculated staffing numbers based on a range of counseling staff-to-client ratios (*i.e.*, 1 to 10¹² and 1 to 5¹³). Based on these assumptions, staff training costs associated with part 2 patient consent procedures were projected to range from \$10.3 million to \$20.7 million in 2016. We averaged the two estimated costs for staff training to determine the final overall estimate of \$15,521,000. We assumed the costs associated with updating training materials will be a one-time cost. Therefore, in subsequent years, we assumed the costs associated with staff training would be a function of the average hourly wage rate (multiplied by two to account for benefits and overhead costs) and the estimated number of staff (developed based on the same two staff-to-client ratios described above multiplied by estimated patient counts). Staff training costs associated with part 2 revisions were projected to range from \$8.3 million to \$16.6 million after 2016. We averaged the two estimated costs for staff training to determine the final overall estimate of \$12,438,000.

ii. Updates to Consent Forms

Updates to the 42 CFR part 2 regulations will need to be reflected in patient consent forms. As there is no literature to date on costs to update forms for 42 CFR part 2, we examined results from a 2008 study from the Mayo Clinic Health Care Systems¹⁴ that reported actuarial costs for HIPAA implementation activities. These costs were about \$1 per patient visit. Adjusted for inflation, costs associated with updating the patient consent forms in 2016 would be \$1.13 per patient visit. We used the average number of substance abuse treatment admissions

from SAMHSA's 2010–2012 TEDS as our estimate of the number of clients treated on an annual basis by part 2 facilities. The total cost burden associated with updating the consent forms to reflect to the updated 42 CFR part 2 regulations would be approximately \$2,104,000 (1,861,693 * \$1.13).^[14]

iii. List of Disclosures Costs

The proposed part 2 regulations allow patients who have consented to disclose their identifying information using a general designation to request a list of entities to which their information has been disclosed pursuant to the general designation. Under this final rule, entities named on a consent form that disclose patient identifying information to their participants under the general designation will be required to provide a list of disclosures after receiving a patient request. Under the List of Disclosures requirements, a patient could make a request, for example, to an organization that facilitates the exchange of health information (e.g., an HIE) or an organization responsible for coordinating care (e.g., an ACO) for a list of disclosures that would include the name of the entity to whom each disclosure was made, the date of the disclosure, and a brief description of the patient identifying information disclosed, and include this information for all entities to whom the patient identifying information has been disclosed pursuant to the general designation in the past two years.

For purposes of the analysis, we assumed that entities disclosing patient identifying information to their participants pursuant to a patient's general designation on a consent form are already collecting the information necessary to comply with the List of Disclosures requirement, in some form, either electronically or using paper records. We also assumed that these entities could comply with the List of Disclosures requirement by either collecting this information electronically by using audit logs to obtain the required information or by keeping a paper record. However, to address possible concerns about technical feasibility and other implementation issues, SAMHSA finalizes its proposal that the List of Disclosures requirement may be implemented at any time, but non-treating providers cannot use the general designation without being able to provide a List of Disclosures to allow entities collecting this information time to review their operations and business processes and to decide whether technological solutions are needed to

enable them to more efficiently comply with the requirement.

In order to make preliminary estimates of the implementation costs, we first estimated the number of potentially impacted entities based on the anticipated number of patient requests for a disclosure report in a calendar year. We used the average number of substance use disorder treatment admissions from SAMHSA's 2010–2012 TEDS (n = 1,861,693) as the number of patients treated annually by part 2 programs. We then used the average of a 0.1 and 2 percent patient request rate as our estimate of the number of impacted entities (n = 19,548).

From there, we assumed 10 percent of the impacted entities would use paper records to comply with the disclosure reporting requirements (n = 1,995) and would have minimal implementation costs. Among the remaining entities, many may be able to comply with the disclosure reporting requirements without developing or implementing new technologies. For entities that do choose to either update their existing capabilities or develop and implement new technologies to facilitate compliance, we assumed two sets of costs: (1) Planning and policy development costs and (2) system update costs. SAMHSA notes that the Office of the National Coordinator for Health Information Technology and other organizations are encouraging adoption of electronic health records to allow providers to access patient records remotely, improve communication with patients and other providers and reduce errors (<https://www.healthit.gov/providers-professionals/benefits-electronic-health-records-ehrs>). For these reasons, we believe that the trend toward adoption of electronic health records will continue.

Absent any data on the number of facilities that would require new technology or the type of technology to be implemented, we assumed that twenty-five percent (n = 4,398) of the remaining entities would choose to upgrade their existing health IT systems. The actual system upgrade costs will vary considerably based on the type of upgrades that are required. Some entities may only require minor system updates to streamline the reporting requirements, while others may choose to implement an entirely new system. Given these data limitations, we assumed an average, per-entity cost, of \$2,500 for planning development costs and an average, per-entity cost, of \$8,000 for system upgrades for a total cost of \$10,500. We assume that ten

percent of entities will implement each year, resulting in 100 percent of the 4,398 entities having implemented the system planning and upgrades by year 10. The implementation costs for List of Disclosures reporting compliance in year 1, and each year thereafter, are estimated to be approximately \$4,618,000 $([4,398 * 0.10] * [8,000 + 2,500])$. We acknowledge that without better data on the number of facilities that may require new technology and the number of facilities that would use the general designation and therefore be required to comply with the list of disclosures requirement, this approach may overestimate or underestimate the costs.

As entities begin to comply with the disclosure reporting requirements, we assumed that the majority of the costs associated with the List of Disclosures requirement would primarily come from staff time needed to prepare a list of disclosures upon a patient's request. We also assumed that the information would need to be converted to a format that is accessible to patients.

For those entities with a health IT system, we expected that disclosure information would be available in the system's audit log. We also assumed that, unless the audit log has some sort of electronic filtering system, it would contain information above and beyond the requirements for complying with a request for a list of disclosures. We had also assumed that the staff accessing and filtering an audit log to compile the information for lists of disclosures would be health information technicians. The average hourly rate for health information technicians is \$19.44 an hour.^[15] In order to account for benefits and overhead costs associated with staff time, we multiplied the hourly wage rate by two. Absent any existing information on the amount of time associated with producing a list of disclosures from an audit log, we assumed it would take a health information technician half a day (or 4 hours) on average, to produce the list from an audit log.

For entities using paper records to track disclosures, we expected that a staff member would need to gather and aggregate the requested list of disclosures from paper records. We assumed medical record technicians would be the staff with the primary responsibility for compiling the information for a list of disclosures. The average hourly rate for medical record technicians is \$19.44 an hour an hour.^[16] In order to account for benefits and overhead costs associated with staff time, we multiplied the hourly wage rate by two. Absent any existing

information on the amount of time associated with producing a list of disclosures from paper records, we assumed it would take a medical record technician 3 hours, on average, to produce the list from paper records. ^[17]

The number of requests for a list of disclosures will determine the overall burden associated with the List of Disclosures reporting requirements. However, because this is a new requirement, there were no data on which to base an estimated number of requests per year. We expected that the rate of requests will be relatively low. We therefore calculated the total costs for two rates, 0.1 percent and 2 percent of patients per year.

We used the average number of substance use disorder treatment admissions from SAMHSA's 2010–2012 TEDS as the number of patients treated annually by part 2 programs. Assuming that 10 percent of patients making requests (n = 186.17 to n = 3,723.39) would request a list of disclosures from entities that track disclosures through paper records and 90 percent of patients making requests (n = 1,675.52 to n = 33,510.47) would make such a request of entities that track disclosures through health IT audit logs, the estimated costs to develop lists of disclosures range from roughly \$21,700 to \$434,300 for entities using paper records, and \$261,000 to \$5,212,000 for entities using audit logs. (These ranges reflect the costs based on the two estimated patient

rates of request referenced above (*i.e.*, 0.1 percent and 2 percent of patients per year)).

Once a list of disclosures has been produced, it can be returned to the patient either by email or mail. Since the method of sending the list of disclosures depends on patient preference, we assumed that 50 percent of the lists of disclosures would be sent by email and 50 percent by first-class mail. We assumed that mailing and supply costs related to list of disclosures notifications were \$0.10 supply cost per notification and \$0.49 postage cost per mailing. We also estimated that it would take an administrative staff member 15 minutes to prepare each list of disclosures for mailing and/or transmitting, and that staff preparing the letters earn \$15.34 ^[18] per hour. In order to account for benefits and overhead costs associated with staff time, we multiplied the hourly wage rate by two. The estimated costs for list of disclosures notifications range from approximately \$7,700 to \$154,000 for notifications sent by first-class mail, and \$7,140 to \$143,000 for notifications sent by email.

To produce the final overall cost estimate, we took the average of the minimum and maximum estimated costs to develop lists of disclosures by entities collecting the information electronically by using an audit log, and the average of the minimum and maximum estimated costs to develop

lists of disclosures by entities using paper records. We then added the averages together to produce our estimate of the total cost to entities to develop lists of disclosures. Next we took the average of the minimum and maximum estimated costs for list of disclosures notifications sent via email and the minimum and maximum estimated costs for such notifications sent via first-class mail. We then added these two averages together to produce our estimate of the total cost to entities for list of disclosures notifications. Finally, the development and notification costs for these lists of disclosures were added together for the final estimate of costs associated with complying with List of Disclosures reporting requirements. The total cost for List of Disclosures reporting compliance across all entities was roughly \$3,120,000 in 2016 dollars. Complying with List of Disclosures requirements is assumed to be an ongoing, annual activity for entities that have completed the system upgrade and comply with the disclosure requirements. Since we assume 10 percent of entities begin to comply with the requirements each year, year 1 reporting compliance costs is roughly \$312,000 ($3,120,000 \times 0.10$) and \$624,000 ($3,120,000 \times 0.20$) in year 2, and continues to increase each year until year 10 all entities are complying and have annual compliance costs of \$3,120,000

TABLE 5—TOTAL ESTIMATED DISCLOSURE REPORTING COSTS IN 2018

[Note: Numbers may not add due to rounding]

	Minimum estimated cost	Maximum estimated cost	Average estimated cost
Facilities with a Health IT System	\$261,000	\$5,212,000	\$2,736,000
Facilities without a Health IT System	21,700	434,300	228,000
Total Costs	2,964,000
Average Number of Facilities	19,548

TABLE 6—TOTAL ESTIMATED DISCLOSURE NOTIFICATION COSTS IN 2018

[Note: Numbers may not add due to rounding]

	Minimum estimated cost	Maximum estimated cost	Average estimated cost
Email Notification	\$7,100	\$143,000	\$75,000
First Class Mail Notification	7,700	154,000	81,000
Total Costs	156,000

iv. IT Updates

SAMHSA, in collaboration with ONC and federal and community stakeholders, has developed Consent2Share which is an open source

tool for consent management and data segmentation that is designed to integrate with existing EHR and HIE systems. SAMHSA plans to release shortly an updated version of Consent2Share with improved

functionality and ability to meet list of disclosures requirements.

The Consent2Share architecture has a front-end, patient facing system known as Patient Consent Management and a backend control system known as

Access Control Services.

Communications with EHR vendors indicated that the cost to facilities of purchasing and installing additional functionality to existing electronic medical records applications, such as Consent2Share, typically range from \$2,500 to \$5,000. Because the add-on systems for part 2 programs may be more complex than standard patient monitoring systems, we estimated that the cost of adding the new functionality would be approximately \$8,000 per facility. We also assumed that this would be a one-time expense, rather than a recurring cost, for each provider. SAMHSA acknowledges that there may be fluctuation in costs among affected entities from the average cost. However, though costs could possibly be higher for some entities, information shared by commenters was largely anecdotal and it is unclear how such data could be broadly extrapolated to a wide range of entities.

Furthermore, national estimates indicated that no more than 50 percent of substance use disorder treatment facilities have an operational “computerized administrative information system.”^[19] We, therefore, estimated that only half of the 12,034 part 2 programs (*i.e.*, 6,017 facilities) would have operational health IT systems that would require modifications to account for the changes to 42 CFR part 2. With 6,017 part 2 programs with operational information systems, we estimated that each facility would need to spend \$8,000 to modify their health IT system, which would lead to a total burden for updating health IT systems of \$48.1 million. Updating health IT systems would be a one-time cost, and maintenance costs should be part of general health IT maintenance costs in later years. The final rule does not require that part 2 programs adopt health IT systems so there are no health IT costs associated with substance use disorder treatment facilities that continue to use paper records.

C. Regulatory Flexibility Act (RFA)

The RFA requires agencies to analyze options for regulatory relief of small entities. For purposes of the RFA, small entities include small businesses, nonprofit organizations, and small governmental jurisdictions. Most hospitals and most other providers are small entities, either by nonprofit status or by having revenues of less than \$7.5 million to \$38.5 million in any one year. Individuals and states are not included in the definition of a small entity. We are not preparing an analysis for the RFA because we have determined, and

the Secretary certifies, that this final rule will not have a significant economic impact on a substantial number of small entities. While the changes in the regulations will apply to all part 2 programs, the impact on these entities would be quite small. Specifically, as described in the Overall Impact section, the cost to part 2 programs associated with updates to 42 CFR part 2 in the first year that the final rule is in effect will be \$76.1 million, a figure that due to a number of one-time updates, is the highest for any of the 10 years estimated. The per-entity economic impact in the first year will be approximately \$6,300 ($\$76,100,000 \div 12,034$), a figure that is unlikely to represent 3 percent of revenues for 5 percent of impacted small entities. Consequently, it has been determined that the final rule will not have a significant economic impact on small entities.

In addition, Section 1102(b) of the Act requires us to prepare a regulatory impact analysis if a rule may have a significant impact on the operations of a substantial number of small rural hospitals. This analysis must conform to the provisions of Section 603 of the RFA. For purposes of Section 1102(b) of the Act, we defined a small rural hospital as a hospital that is located outside of a Metropolitan Statistical Area for Medicare payment regulations and has fewer than 100 beds. We are not preparing an analysis for Section 1102(b) of the Act because we have determined, and the Secretary certifies, that this final rule will not have a significant impact on the operations of a substantial number of small rural hospitals.

D. Unfunded Mandates Reform Act

Section 202 of the Unfunded Mandates Reform Act of 1995 also requires that agencies assess anticipated costs and benefits before issuing any rule whose mandates require spending in any one year of \$100 million in 1995 dollars, updated annually for inflation. In 2016, that threshold is approximately \$146 million. This rule will have no consequential effect on state, local, or tribal governments or on the private sector.

E. Federalism (Executive Order 13132)

Executive Order 13132 establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. Since this rule does not impose any

costs on state or local governments, the requirements of Executive Order 13132 are not applicable.

SAMHSA is modernizing 42 CFR part 2. With respect to our revisions to the part 2 regulations, we do not believe that this final rule will have a significant impact as it gives more flexibility to individuals and entities covered by 42 CFR part 2 but also adds privacy protections within the consent requirements for the patient. We are revising the part 2 regulations in response to concerns that 42 CFR part 2 was outdated and burdensome.

Executive Order 13132 on Federalism (August 4, 1999) establishes certain requirements that an agency must meet when it promulgates a proposed rule (and subsequent final rule) that imposes substantial direct requirement costs on state and local governments, preempts state law, or otherwise has Federalism implications. We have reviewed this final rule under the threshold criteria of Executive Order 13132, Federalism, and have determined that it will not have substantial direct effects on the rights, roles, and responsibilities of states, local or tribal governments.

Conclusion

SAMHSA is enacting changes to modernize 42 CFR part 2. With respect to our revisions to the regulations, we do not believe that this final rule will have a significant impact as it gives more flexibility to individuals and entities covered by 42 CFR part 2 but also increases privacy protections within the consent requirements and adds an additional confidentiality safeguard for patients. This final rule does not reach the threshold for requiring a regulatory impact analysis by Executive Orders 12866 and 13563 and thus is not considered an economically significant rule. This rule will not have a significant economic impact on a substantial number of small entities. This rule will not have a significant impact on the operations of a substantial number of small rural hospitals. Since this rule does not impose any costs on state or local governments, the requirements of Executive Order 13132 on federalism are not applicable.

17. For facilities that maintain paper records, consent forms would indicate who has been given access to the record. By contrast, our understanding of health IT audit logs is that they include a record of all instances in which a record has been accessed. The audit log will include a record of who accessed the system, the date the record was accessed, and what operations were performed. The audit logs, therefore,

will include considerably more data than what we would anticipate finding in paper records. Unless the audit log has an electronic filtering system, we are assuming that a health information technician will need to manually review all records in an audit log in order to compile the necessary information for a list of disclosures.

List of Subjects in 42 CFR Part 2

Alcohol abuse, Alcoholism, Drug abuse, Grant programs-health, Health records, Privacy, Reporting, and Recordkeeping requirements.

■ For the reasons stated in the preamble of this final rule, SAMHSA revises 42 CFR part 2 to read as follows:

PART 2—CONFIDENTIALITY OF SUBSTANCE USE DISORDER PATIENT RECORDS

Subpart A—Introduction

Sec.

- 2.1 Statutory authority for confidentiality of substance use disorder patient records.
- 2.2 Purpose and effect.
- 2.3 Criminal penalty for violation.
- 2.4 Reports of violations.

Subpart B—General Provisions

Sec.

- 2.11 Definitions.
- 2.12 Applicability.
- 2.13 Confidentiality restrictions and safeguards.
- 2.14 Minor patients.
- 2.15 Incompetent and deceased patients.
- 2.16 Security for records.
- 2.17 Undercover agents and informants.
- 2.18 Restrictions on the use of identification cards.
- 2.19 Disposition of records by discontinued programs.
- 2.20 Relationship to state laws.
- 2.21 Relationship to federal statutes protecting research subjects against compulsory disclosure of their identity.
- 2.22 Notice to patients of federal confidentiality requirements.
- 2.23 Patient access and restrictions on use.

Subpart C—Disclosures with Patient Consent

Sec.

- 2.31 Consent requirements.
- 2.32 Prohibition on re-disclosure.
- 2.33 Disclosures permitted with written consent.
- 2.34 Disclosures to prevent multiple enrollments.
- 2.35 Disclosures to elements of the criminal justice system which have referred patients.

Subpart D—Disclosures without Patient Consent

Sec.

- 2.51 Medical emergencies.
- 2.52 Research.
- 2.53 Audit and evaluation.

Subpart E—Court Orders Authorizing Disclosure and Use

Sec.

- 2.61 Legal effect of order.
- 2.62 Order not applicable to records disclosed without consent to researchers, auditors and evaluators.
- 2.63 Confidential communications.
- 2.64 Procedures and criteria for orders authorizing disclosures for noncriminal purposes.
- 2.65 Procedures and criteria for orders authorizing disclosure and use of records to criminally investigate or prosecute patients.
- 2.66 Procedures and criteria for orders authorizing disclosure and use of records to investigate or prosecute a part 2 program or the person holding the records.
- 2.67 Orders authorizing the use of undercover agents and informants to criminally investigate employees or agents of a part 2 program.

Authority: 42 U.S.C. 290dd–2.

Subpart A—Introduction

§ 2.1 Statutory authority for confidentiality of substance use disorder patient records.

Title 42, United States Code, Section 290dd–2(g) authorizes the Secretary to prescribe regulations. Such regulations may contain such definitions, and may provide for such safeguards and procedures, including procedures and criteria for the issuance and scope of orders, as in the judgment of the Secretary are necessary or proper to effectuate the purposes of this statute, to prevent circumvention or evasion thereof, or to facilitate compliance therewith.

§ 2.2 Purpose and effect.

(a) *Purpose.* Pursuant to 42 U.S.C. 290dd–2(g), the regulations in this part impose restrictions upon the disclosure and use of substance use disorder patient records which are maintained in connection with the performance of any part 2 program. The regulations in this part include the following subparts:

(1) Subpart B of this part: General Provisions, including definitions, applicability, and general restrictions;

(2) Subpart C of this part: Disclosures with Patient Consent, including disclosures which require patient consent and the consent form requirements;

(3) Subpart D of this part: Disclosures without Patient Consent, including disclosures which do not require patient

consent or an authorizing court order; and

(4) Subpart E of this part: Court Orders Authorizing Disclosure and Use, including disclosures and uses of patient records which may be made with an authorizing court order and the procedures and criteria for the entry and scope of those orders.

(b) *Effect.* (1) The regulations in this part prohibit the disclosure and use of patient records unless certain circumstances exist. If any circumstance exists under which disclosure is permitted, that circumstance acts to remove the prohibition on disclosure but it does not compel disclosure. Thus, the regulations do not require disclosure under any circumstances.

(2) The regulations in this part are not intended to direct the manner in which substantive functions such as research, treatment, and evaluation are carried out. They are intended to ensure that a patient receiving treatment for a substance use disorder in a part 2 program is not made more vulnerable by reason of the availability of their patient record than an individual with a substance use disorder who does not seek treatment.

(3) Because there is a criminal penalty for violating the regulations, they are to be construed strictly in favor of the potential violator in the same manner as a criminal statute (see *M. Kraus & Brothers v. United States*, 327 U.S. 614, 621–22, 66 S. Ct. 705, 707–08 (1946)).

§ 2.3 Criminal penalty for violation.

Under 42 U.S.C. 290dd–2(f), any person who violates any provision of this section or any regulation issued pursuant to this section shall be fined in accordance with Title 18 of the U.S. Code.

§ 2.4 Reports of violations.

(a) The report of any violation of the regulations in this part may be directed to the United States Attorney for the judicial district in which the violation occurs.

(b) The report of any violation of the regulations in this part by an opioid treatment program may be directed to the United States Attorney for the judicial district in which the violation occurs as well as to the Substance Abuse and Mental Health Services Administration (SAMHSA) office responsible for opioid treatment program oversight.

Subpart B—General Provisions

§ 2.11 Definitions.

For purposes of the regulations in this part:

Central registry means an organization which obtains from two or more member programs patient identifying information about individuals applying for withdrawal management or maintenance treatment for the purpose of avoiding an individual's concurrent enrollment in more than one treatment program.

Diagnosis means any reference to an individual's substance use disorder or to a condition which is identified as having been caused by that substance use disorder which is made for the purpose of treatment or referral for treatment.

Disclose means to communicate any information identifying a patient as being or having been diagnosed with a substance use disorder, having or having had a substance use disorder, or being or having been referred for treatment of a substance use disorder either directly, by reference to publicly available information, or through verification of such identification by another person.

Federally assisted—see § 2.12(b).

Informant means an individual:

(1) Who is a patient or employee of a part 2 program or who becomes a patient or employee of a part 2 program at the request of a law enforcement agency or official; and

(2) Who at the request of a law enforcement agency or official observes one or more patients or employees of the part 2 program for the purpose of reporting the information obtained to the law enforcement agency or official.

Maintenance treatment means long-term pharmacotherapy for individuals with substance use disorders that reduces the pathological pursuit of reward and/or relief and supports remission of substance use disorder-related symptoms.

Member program means a withdrawal management or maintenance treatment program which reports patient identifying information to a central registry and which is in the same state as that central registry or is in a state that participates in data sharing with the central registry of the program in question.

Minor, as used in the regulations in this part, means an individual who has not attained the age of majority specified in the applicable state law, or if no age of majority is specified in the applicable state law, the age of 18 years.

Part 2 program means a federally assisted program (federally assisted as defined in § 2.12(b) and program as defined in this section). See § 2.12(e)(1) for examples.

Part 2 program director means:

(1) In the case of a part 2 program that is an individual, that individual.

(2) In the case of a part 2 program that is an entity, the individual designated as director or managing director, or individual otherwise vested with authority to act as chief executive officer of the part 2 program.

Patient means any individual who has applied for or been given diagnosis, treatment, or referral for treatment for a substance use disorder at a part 2 program. *Patient* includes any individual who, after arrest on a criminal charge, is identified as an individual with a substance use disorder in order to determine that individual's eligibility to participate in a part 2 program. This definition includes both current and former patients.

Patient identifying information means the name, address, social security number, fingerprints, photograph, or similar information by which the identity of a patient, as defined in this section, can be determined with reasonable accuracy either directly or by reference to other information. The term does not include a number assigned to a patient by a part 2 program, for internal use only by the part 2 program, if that number does not consist of or contain numbers (such as a social security, or driver's license number) that could be used to identify a patient with reasonable accuracy from sources external to the part 2 program.

Person means an individual, partnership, corporation, federal, state or local government agency, or any other legal entity, (also referred to as "individual or entity").

Program means:

(1) An individual or entity (other than a general medical facility) who holds itself out as providing, and provides, substance use disorder diagnosis, treatment, or referral for treatment; or

(2) An identified unit within a general medical facility that holds itself out as providing, and provides, substance use disorder diagnosis, treatment, or referral for treatment; or

(3) Medical personnel or other staff in a general medical facility whose primary function is the provision of substance use disorder diagnosis, treatment, or referral for treatment and who are identified as such providers.

Qualified service organization means an individual or entity who:

(1) Provides services to a part 2 program, such as data processing, bill collecting, dosage preparation, laboratory analyses, or legal, accounting, population health management, medical staffing, or other professional services, or services to prevent or treat child

abuse or neglect, including training on nutrition and child care and individual and group therapy, and

(2) Has entered into a written agreement with a part 2 program under which that individual or entity:

(i) Acknowledges that in receiving, storing, processing, or otherwise dealing with any patient records from the part 2 program, it is fully bound by the regulations in this part; and

(ii) If necessary, will resist in judicial proceedings any efforts to obtain access to patient identifying information related to substance use disorder diagnosis, treatment, or referral for treatment except as permitted by the regulations in this part.

Records means any information, whether recorded or not, created by, received, or acquired by a part 2 program relating to a patient (e.g., diagnosis, treatment and referral for treatment information, billing information, emails, voice mails, and texts). For the purpose of the regulations in this part, records include both paper and electronic records.

Substance use disorder means a cluster of cognitive, behavioral, and physiological symptoms indicating that the individual continues using the substance despite significant substance-related problems such as impaired control, social impairment, risky use, and pharmacological tolerance and withdrawal. For the purposes of the regulations in this part, this definition does not include tobacco or caffeine use.

Third-party payer means an individual or entity who pays and/or agrees to pay for diagnosis or treatment furnished to a patient on the basis of a contractual relationship with the patient or a member of the patient's family or on the basis of the patient's eligibility for federal, state, or local governmental benefits.

Treating provider relationship means that, regardless of whether there has been an actual in-person encounter:

(1) A patient is, agrees to, or is legally required to be diagnosed, evaluated, and/or treated, or agrees to accept consultation, for any condition by an individual or entity, and;

(2) The individual or entity undertakes or agrees to undertake diagnosis, evaluation, and/or treatment of the patient, or consultation with the patient, for any condition.

Treatment means the care of a patient suffering from a substance use disorder, a condition which is identified as having been caused by the substance use disorder, or both, in order to reduce or eliminate the adverse effects upon the patient.

Undercover agent means any federal, state, or local law enforcement agency or official who enrolls in or becomes an employee of a part 2 program for the purpose of investigating a suspected violation of law or who pursues that purpose after enrolling or becoming employed for other purposes.

Withdrawal management means the use of pharmacotherapies to treat or attenuate the problematic signs and symptoms arising when heavy and/or prolonged substance use is reduced or discontinued.

§ 2.12 Applicability.

(a) *General*—(1) *Restrictions on disclosure*. The restrictions on disclosure in the regulations in this part apply to any information, whether or not recorded, which:

(i) Would identify a patient as having or having had a substance use disorder either directly, by reference to publicly available information, or through verification of such identification by another person; and

(ii) Is drug abuse information obtained by a federally assisted drug abuse program after March 20, 1972 (part 2 program), or is alcohol abuse information obtained by a federally assisted alcohol abuse program after May 13, 1974 (part 2 program); or if obtained before the pertinent date, is maintained by a part 2 program after that date as part of an ongoing treatment episode which extends past that date; for the purpose of treating a substance use disorder, making a diagnosis for that treatment, or making a referral for that treatment.

(2) *Restriction on use*. The restriction on use of information to initiate or substantiate any criminal charges against a patient or to conduct any criminal investigation of a patient (42 U.S.C. 290dd–2(c)) applies to any information, whether or not recorded, which is drug abuse information obtained by a federally assisted drug abuse program after March 20, 1972 (part 2 program), or is alcohol abuse information obtained by a federally assisted alcohol abuse program after May 13, 1974 (part 2 program); or if obtained before the pertinent date, is maintained by a part 2 program after that date as part of an ongoing treatment episode which extends past that date; for the purpose of treating a substance use disorder, making a diagnosis for the treatment, or making a referral for the treatment.

(b) *Federal assistance*. A program is considered to be federally assisted if:

(1) It is conducted in whole or in part, whether directly or by contract or otherwise by any department or agency

of the United States (but see paragraphs (c)(1) and (2) of this section relating to the Department of Veterans Affairs and the Armed Forces);

(2) It is being carried out under a license, certification, registration, or other authorization granted by any department or agency of the United States including but not limited to:

(i) Participating provider in the Medicare program;

(ii) Authorization to conduct maintenance treatment or withdrawal management; or

(iii) Registration to dispense a substance under the Controlled Substances Act to the extent the controlled substance is used in the treatment of substance use disorders; (3) It is supported by funds provided by any department or agency of the United States by being:

(i) A recipient of federal financial assistance in any form, including financial assistance which does not directly pay for the substance use disorder diagnosis, treatment, or referral for treatment; or

(ii) Conducted by a state or local government unit which, through general or special revenue sharing or other forms of assistance, receives federal funds which could be (but are not necessarily) spent for the substance use disorder program; or

(4) It is assisted by the Internal Revenue Service of the Department of the Treasury through the allowance of income tax deductions for contributions to the program or through the granting of tax exempt status to the program.

(c) *Exceptions*—(1) *Department of Veterans Affairs*. These regulations do not apply to information on substance use disorder patients maintained in connection with the Department of Veterans Affairs' provision of hospital care, nursing home care, domiciliary care, and medical services under Title 38, U.S.C. Those records are governed by 38 U.S.C. 7332 and regulations issued under that authority by the Secretary of Veterans Affairs.

(2) *Armed Forces*. The regulations in this part apply to any information described in paragraph (a) of this section which was obtained by any component of the Armed Forces during a period when the patient was subject to the Uniform Code of Military Justice except:

(i) Any interchange of that information within the Armed Forces; and

(ii) Any interchange of that information between the Armed Forces and those components of the Department of Veterans Affairs furnishing health care to veterans.

(3) *Communication within a part 2 program or between a part 2 program and an entity having direct administrative control over that part 2 program.* The restrictions on disclosure in the regulations in this part do not apply to communications of information between or among personnel having a need for the information in connection with their duties that arise out of the provision of diagnosis, treatment, or referral for treatment of patients with substance use disorders if the communications are:

(i) Within a part 2 program; or
(ii) Between a part 2 program and an entity that has direct administrative control over the program.

(4) *Qualified service organizations.* The restrictions on disclosure in the regulations in this part do not apply to communications between a part 2 program and a qualified service organization of information needed by the qualified service organization to provide services to the program.

(5) *Crimes on part 2 program premises or against part 2 program personnel.* The restrictions on disclosure and use in the regulations in this part do not apply to communications from part 2 program personnel to law enforcement agencies or officials which:

(i) Are directly related to a patient's commission of a crime on the premises of the part 2 program or against part 2 program personnel or to a threat to commit such a crime; and

(ii) Are limited to the circumstances of the incident, including the patient status of the individual committing or threatening to commit the crime, that individual's name and address, and that individual's last known whereabouts.

(6) *Reports of suspected child abuse and neglect.* The restrictions on disclosure and use in the regulations in this part do not apply to the reporting under state law of incidents of suspected child abuse and neglect to the appropriate state or local authorities. However, the restrictions continue to apply to the original substance use disorder patient records maintained by the part 2 program including their disclosure and use for civil or criminal proceedings which may arise out of the report of suspected child abuse and neglect.

(d) *Applicability to recipients of information—* (1) *Restriction on use of information.* The restriction on the use of any information subject to the regulations in this part to initiate or substantiate any criminal charges against a patient or to conduct any criminal investigation of a patient applies to any person who obtains that information from a part 2 program,

regardless of the status of the person obtaining the information or whether the information was obtained in accordance with the regulations in this part. This restriction on use bars, among other things, the introduction of that information as evidence in a criminal proceeding and any other use of the information to investigate or prosecute a patient with respect to a suspected crime. Information obtained by undercover agents or informants (see § 2.17) or through patient access (see § 2.23) is subject to the restriction on use.

(2) *Restrictions on disclosures—*(i) *Third-party payers, administrative entities, and others.* The restrictions on disclosure in the regulations in this part apply to:

(A) Third-party payers with regard to records disclosed to them by part 2 programs or under § 2.31(a)(4)(iii)(A);

(B) Entities having direct administrative control over part 2 programs with regard to information that is subject to the regulations in this part communicated to them by the part 2 program under paragraph (c)(3) of this section; and

(C) Individuals or entities who receive patient records directly from a part 2 program or other lawful holder of patient identifying information and who are notified of the prohibition on re-disclosure in accordance with § 2.32.

(ii) [Reserved]

(e) *Explanation of applicability—*(1) *Coverage.* These regulations cover any information (including information on referral and intake) about patients receiving diagnosis, treatment, or referral for treatment for a substance use disorder created by a part 2 program. Coverage includes, but is not limited to, those treatment or rehabilitation programs, employee assistance programs, programs within general hospitals, school-based programs, and private practitioners who hold themselves out as providing, and provide substance use disorder diagnosis, treatment, or referral for treatment. However, the regulations in this part would not apply, for example, to emergency room personnel who refer a patient to the intensive care unit for an apparent overdose, unless the primary function of such personnel is the provision of substance use disorder diagnosis, treatment, or referral for treatment and they are identified as providing such services or the emergency room has promoted itself to the community as a provider of such services.

(2) *Federal assistance to program required.* If a patient's substance use disorder diagnosis, treatment, or referral

for treatment is not provided by a part 2 program, that patient's record is not covered by the regulations in this part. Thus, it is possible for an individual patient to benefit from federal support and not be covered by the confidentiality regulations because the program in which the patient is enrolled is not federally assisted as defined in paragraph (b) of this section. For example, if a federal court placed an individual in a private for-profit program and made a payment to the program on behalf of that individual, that patient's record would not be covered by the regulations in this part unless the program itself received federal assistance as defined by paragraph (b) of this section.

(3) *Information to which restrictions are applicable.* Whether a restriction applies to use or disclosure affects the type of information which may be disclosed. The restrictions on disclosure apply to any information which would identify a patient as having or having had a substance use disorder. The restriction on use of information to bring criminal charges against a patient for a crime applies to any information obtained by the part 2 program for the purpose of diagnosis, treatment, or referral for treatment of patients with substance use disorders. (Note that restrictions on use and disclosure apply to recipients of information under paragraph (d) of this section.)

(4) *How type of diagnosis affects coverage.* These regulations cover any record of a diagnosis identifying a patient as having or having had a substance use disorder which is initially prepared by a part 2 provider in connection with the treatment or referral for treatment of a patient with a substance use disorder. A diagnosis prepared for the purpose of treatment or referral for treatment but which is not so used is covered by the regulations in this part. The following are not covered by the regulations in this part:

(i) Diagnosis which is made solely for the purpose of providing evidence for use by law enforcement agencies or officials; or

(ii) A diagnosis of drug overdose or alcohol intoxication which clearly shows that the individual involved does not have a substance use disorder (*e.g.*, involuntary ingestion of alcohol or drugs or reaction to a prescribed dosage of one or more drugs).

§2.13 Confidentiality restrictions and safeguards.

(a) *General.* The patient records subject to the regulations in this part may be disclosed or used only as permitted by the regulations in this part

and may not otherwise be disclosed or used in any civil, criminal, administrative, or legislative proceedings conducted by any federal, state, or local authority. Any disclosure made under the regulations in this part must be limited to that information which is necessary to carry out the purpose of the disclosure.

(b) *Unconditional compliance required.* The restrictions on disclosure and use in the regulations in this part apply whether or not the part 2 program or other lawful holder of the patient identifying information believes that the person seeking the information already has it, has other means of obtaining it, is a law enforcement agency or official or other government official, has obtained a subpoena, or asserts any other justification for a disclosure or use which is not permitted by the regulations in this part.

(c) *Acknowledging the presence of patients: Responding to requests.* (1) The presence of an identified patient in a health care facility or component of a health care facility which is publicly identified as a place where only substance use disorder diagnosis, treatment, or referral for treatment is provided may be acknowledged only if the patient's written consent is obtained in accordance with subpart C of this part or if an authorizing court order is entered in accordance with subpart E of this part. The regulations permit acknowledgement of the presence of an identified patient in a health care facility or part of a health care facility if the health care facility is not publicly identified as only a substance use disorder diagnosis, treatment, or referral for treatment facility, and if the acknowledgement does not reveal that the patient has a substance use disorder.

(2) Any answer to a request for a disclosure of patient records which is not permissible under the regulations in this part must be made in a way that will not affirmatively reveal that an identified individual has been, or is being, diagnosed or treated for a substance use disorder. An inquiring party may be provided a copy of the regulations in this part and advised that they restrict the disclosure of substance use disorder patient records, but may not be told affirmatively that the regulations restrict the disclosure of the records of an identified patient.

(d) *List of disclosures.* Upon request, patients who have consented to disclose their patient identifying information using a general designation pursuant to § 2.31(a)(4)(iii)(B)(3) must be provided a list of entities to which their information has been disclosed pursuant to the general designation.

(1) Under this paragraph (d), patient requests:

(i) Must be made in writing; and
(ii) Are limited to disclosures made within the past two years;

(2) Under this paragraph (d), the entity named on the consent form that discloses information pursuant to a patient's general designation (the entity that serves as an intermediary, as described in § 2.31(a)(4)(iii)(B)) must:

(i) Respond in 30 or fewer days of receipt of the written request; and
(ii) Provide, for each disclosure, the name(s) of the entity(-ies) to which the disclosure was made, the date of the disclosure, and a brief description of the patient identifying information disclosed.

(3) The part 2 program is not responsible for compliance with this paragraph (d); the entity that serves as an intermediary, as described in § 2.31(a)(4)(iii)(B), is responsible for compliance with the list of disclosures requirement.

§ 2.14 Minor patients.

(a) *State law not requiring parental consent to treatment.* If a minor patient acting alone has the legal capacity under the applicable state law to apply for and obtain substance use disorder treatment, any written consent for disclosure authorized under subpart C of this part may be given only by the minor patient. This restriction includes, but is not limited to, any disclosure of patient identifying information to the parent or guardian of a minor patient for the purpose of obtaining financial reimbursement. These regulations do not prohibit a part 2 program from refusing to provide treatment until the minor patient consents to the disclosure necessary to obtain reimbursement, but refusal to provide treatment may be prohibited under a state or local law requiring the program to furnish the service irrespective of ability to pay.

(b) *State law requiring parental consent to treatment.* (1) Where state law requires consent of a parent, guardian, or other individual for a minor to obtain treatment for a substance use disorder, any written consent for disclosure authorized under subpart C of this part must be given by both the minor and their parent, guardian, or other individual authorized under state law to act in the minor's behalf.

(2) Where state law requires parental consent to treatment, the fact of a minor's application for treatment may be communicated to the minor's parent, guardian, or other individual authorized under state law to act in the minor's behalf only if:

(i) The minor has given written consent to the disclosure in accordance with subpart C of this part; or

(ii) The minor lacks the capacity to make a rational choice regarding such consent as judged by the part 2 program director under paragraph (c) of this section.

(c) *Minor applicant for services lacks capacity for rational choice.* Facts relevant to reducing a substantial threat to the life or physical well-being of the minor applicant or any other individual may be disclosed to the parent, guardian, or other individual authorized under state law to act in the minor's behalf if the part 2 program director judges that:

(1) A minor applicant for services lacks capacity because of extreme youth or mental or physical condition to make a rational decision on whether to consent to a disclosure under subpart C of this part to their parent, guardian, or other individual authorized under state law to act in the minor's behalf; and

(2) The minor applicant's situation poses a substantial threat to the life or physical well-being of the minor applicant or any other individual which may be reduced by communicating relevant facts to the minor's parent, guardian, or other individual authorized under state law to act in the minor's behalf.

§ 2.15 Incompetent and deceased patients.

(a) *Incompetent patients other than minors—*(1) *Adjudication of incompetence.* In the case of a patient who has been adjudicated as lacking the capacity, for any reason other than insufficient age, to their own affairs, any consent which is required under the regulations in this part may be given by the guardian or other individual authorized under state law to act in the patient's behalf.

(2) *No adjudication of incompetency.* In the case of a patient, other than a minor or one who has been adjudicated incompetent, that for any period suffers from a medical condition that prevents knowing or effective action on their own behalf, the part 2 program director may exercise the right of the patient to consent to a disclosure under subpart C of this part for the sole purpose of obtaining payment for services from a third-party payer.

(b) *Deceased patients—*(1) *Vital statistics.* These regulations do not restrict the disclosure of patient identifying information relating to the cause of death of a patient under laws requiring the collection of death or other vital statistics or permitting inquiry into the cause of death.

(2) *Consent by personal representative.* Any other disclosure of information identifying a deceased patient as having a substance use disorder is subject to the regulations in this part. If a written consent to the disclosure is required, that consent may be given by an executor, administrator, or other personal representative appointed under applicable state law. If there is no such applicable state law appointment, the consent may be given by the patient's spouse or, if none, by any responsible member of the patient's family.

§ 2.16 Security for records.

(a) The part 2 program or other lawful holder of patient identifying information must have in place formal policies and procedures to reasonably protect against unauthorized uses and disclosures of patient identifying information and to protect against reasonably anticipated threats or hazards to the security of patient identifying information. These formal policies and procedures must address:

- (1) Paper records, including:
 - (i) Transferring and removing such records;
 - (ii) Destroying such records, including sanitizing the hard copy media associated with the paper printouts, to render the patient identifying information non-retrievable;
 - (iii) Maintaining such records in a secure room, locked file cabinet, safe, or other similar container, or storage facility when not in use;
 - (iv) Using and accessing workstations, secure rooms, locked file cabinets, safes, or other similar containers, and storage facilities that use or store such information; and
 - (v) Rendering patient identifying information non-identifiable in a manner that creates a very low risk of re-identification (e.g., removing direct identifiers).

(2) Electronic records, including:

- (i) Creating, receiving, maintaining, and transmitting such records;
- (ii) Destroying such records, including sanitizing the electronic media on which such records are stored, to render the patient identifying information non-retrievable;
- (iii) Using and accessing electronic records or other electronic media containing patient identifying information; and
- (iv) Rendering the patient identifying information non-identifiable in a manner that creates a very low risk of re-identification (e.g., removing direct identifiers).

(b) [Reserved]

§ 2.17 Undercover agents and informants.

(a) *Restrictions on placement.* Except as specifically authorized by a court order granted under § 2.67, no part 2 program may knowingly employ, or enroll as a patient, any undercover agent or informant.

(b) *Restriction on use of information.* No information obtained by an undercover agent or informant, whether or not that undercover agent or informant is placed in a part 2 program pursuant to an authorizing court order, may be used to criminally investigate or prosecute any patient.

§ 2.18 Restrictions on the use of identification cards.

No person may require any patient to carry in their immediate possession while away from the part 2 program premises any card or other object which would identify the patient as having a substance use disorder. This section does not prohibit a person from requiring patients to use or carry cards or other identification objects on the premises of a part 2 program.

§ 2.19 Disposition of records by discontinued programs.

(a) *General.* If a part 2 program discontinues operations or is taken over or acquired by another program, it must remove patient identifying information from its records or destroy its records, including sanitizing any associated hard copy or electronic media, to render the patient identifying information non-retrievable in a manner consistent with the policies and procedures established under § 2.16, unless:

(1) The patient who is the subject of the records gives written consent (meeting the requirements of § 2.31) to a transfer of the records to the acquiring program or to any other program designated in the consent (the manner of obtaining this consent must minimize the likelihood of a disclosure of patient identifying information to a third party); or

(2) There is a legal requirement that the records be kept for a period specified by law which does not expire until after the discontinuation or acquisition of the part 2 program.

(b) *Special procedure where retention period required by law.* If paragraph (a)(2) of this section applies:

- (1) Records, which are paper, must be:
 - (i) Sealed in envelopes or other containers labeled as follows: "Records of [insert name of program] required to be maintained under [insert citation to statute, regulation, court order or other legal authority requiring that records be kept] until a date not later than [insert appropriate date]";

(A) All hard copy media from which the paper records were produced, such as printer and facsimile ribbons, drums, etc., must be sanitized to render the data non-retrievable; and

(B) [Reserved]

(ii) Held under the restrictions of the regulations in this part by a responsible person who must, as soon as practicable after the end of the required retention period specified on the label, destroy the records and sanitize any associated hard copy media to render the patient identifying information non-retrievable in a manner consistent with the discontinued program's or acquiring program's policies and procedures established under § 2.16.

(2) Records, which are electronic, must be:

(i) Transferred to a portable electronic device with implemented encryption to encrypt the data at rest so that there is a low probability of assigning meaning without the use of a confidential process or key and implemented access controls for the confidential process or key; or

(ii) Transferred, along with a backup copy, to separate electronic media, so that both the records and the backup copy have implemented encryption to encrypt the data at rest so that there is a low probability of assigning meaning without the use of a confidential process or key and implemented access controls for the confidential process or key; and

(iii) Within one year of the discontinuation or acquisition of the program, all electronic media on which the patient records or patient identifying information resided prior to being transferred to the device specified in (i) above or the original and backup electronic media specified in (ii) above, including email and other electronic communications, must be sanitized to render the patient identifying information non-retrievable in a manner consistent with the discontinued program's or acquiring program's policies and procedures established under § 2.16; and

(iv) The portable electronic device or the original and backup electronic media must be:

(A) Sealed in a container along with any equipment needed to read or access the information, and labeled as follows: "Records of [insert name of program] required to be maintained under [insert citation to statute, regulation, court order or other legal authority requiring that records be kept] until a date not later than [insert appropriate date];" and

(B) Held under the restrictions of the regulations in this part by a responsible person who must store the container in a manner that will protect the

information (e.g., climate controlled environment); and

(v) The responsible person must be included on the access control list and be provided a means for decrypting the data. The responsible person must store the decryption tools on a device or at a location separate from the data they are used to encrypt or decrypt; and

(vi) As soon as practicable after the end of the required retention period specified on the label, the portable electronic device or the original and backup electronic media must be sanitized to render the patient identifying information non-retrievable consistent with the policies established under § 2.16.

§ 2.20 Relationship to state laws.

The statute authorizing the regulations in this part (42 U.S.C. 290dd-2) does not preempt the field of law which they cover to the exclusion of all state laws in that field. If a disclosure permitted under the regulations in this part is prohibited under state law, neither the regulations in this part nor the authorizing statute may be construed to authorize any violation of that state law. However, no state law may either authorize or compel any disclosure prohibited by the regulations in this part.

§ 2.21 Relationship to federal statutes protecting research subjects against compulsory disclosure of their identity.

(a) *Research privilege description.* There may be concurrent coverage of patient identifying information by the regulations in this part and by administrative action taken under section 502(c) of the Controlled Substances Act (21 U.S.C. 872(c) and the implementing regulations at 21 CFR part 1316); or section 301(d) of the Public Health Service Act (42 U.S.C. 241(d) and the implementing regulations at 42 CFR part 2a). These research privilege statutes confer on the Secretary of Health and Human Services and on the Attorney General, respectively, the power to authorize researchers conducting certain types of research to withhold from all persons not connected with the research the names and other identifying information concerning individuals who are the subjects of the research.

(b) *Effect of concurrent coverage.* These regulations restrict the disclosure and use of information about patients, while administrative action taken under the research privilege statutes and implementing regulations protects a person engaged in applicable research from being compelled to disclose any identifying characteristics of the

individuals who are the subjects of that research. The issuance under subpart E of this part of a court order authorizing a disclosure of information about a patient does not affect an exercise of authority under these research privilege statutes.

§ 2.22 Notice to patients of federal confidentiality requirements.

(a) *Notice required.* At the time of admission to a part 2 program or, in the case that a patient does not have capacity upon admission to understand his or her medical status, as soon thereafter as the patient attains such capacity, each part 2 program shall:

(1) Communicate to the patient that federal law and regulations protect the confidentiality of substance use disorder patient records; and

(2) Give to the patient a summary in writing of the federal law and regulations.

(b) *Required elements of written summary.* The written summary of the federal law and regulations must include:

(1) A general description of the limited circumstances under which a part 2 program may acknowledge that an individual is present or disclose outside the part 2 program information identifying a patient as having or having had a substance use disorder;

(2) A statement that violation of the federal law and regulations by a part 2 program is a crime and that suspected violations may be reported to appropriate authorities consistent with § 2.4, along with contact information;

(3) A statement that information related to a patient's commission of a crime on the premises of the part 2 program or against personnel of the part 2 program is not protected;

(4) A statement that reports of suspected child abuse and neglect made under state law to appropriate state or local authorities are not protected; and

(5) A citation to the federal law and regulations.

(c) *Program options.* The part 2 program must devise a notice to comply with the requirement to provide the patient with a summary in writing of the federal law and regulations. In this written summary, the part 2 program also may include information concerning state law and any of the part 2 program's policies that are not inconsistent with state and federal law on the subject of confidentiality of substance use disorder patient records.

§ 2.23 Patient access and restrictions on use.

(a) *Patient access not prohibited.* These regulations do not prohibit a part

2 program from giving a patient access to their own records, including the opportunity to inspect and copy any records that the part 2 program maintains about the patient. The part 2 program is not required to obtain a patient's written consent or other authorization under the regulations in this part in order to provide such access to the patient.

(b) *Restriction on use of information.* Information obtained by patient access to his or her patient record is subject to the restriction on use of this information to initiate or substantiate any criminal charges against the patient or to conduct any criminal investigation of the patient as provided for under § 2.12(d)(1).

Subpart C—Disclosures With Patient Consent

§ 2.31 Consent requirements.

(a) *Required elements for written consent.* A written consent to a disclosure under the regulations in this part may be paper or electronic and must include:

(1) The name of the patient.

(2) The specific name(s) or general designation(s) of the part 2 program(s), entity(ies), or individual(s) permitted to make the disclosure.

(3) How much and what kind of information is to be disclosed, including an explicit description of the substance use disorder information that may be disclosed.

(4)(i) The name(s) of the individual(s) to whom a disclosure is to be made; or

(ii) *Entities with a treating provider relationship with the patient.* If the recipient entity has a treating provider relationship with the patient whose information is being disclosed, such as a hospital, a health care clinic, or a private practice, the name of that entity; or

(iii) *Entities without a treating provider relationship with the patient.*

(A) If the recipient entity does not have a treating provider relationship with the patient whose information is being disclosed and is a third-party payer, the name of the entity; or

(B) If the recipient entity does not have a treating provider relationship with the patient whose information is being disclosed and is not covered by paragraph (a)(4)(iii)(A) of this section, such as an entity that facilitates the exchange of health information or a research institution, the name(s) of the entity(-ies); and

(1) The name(s) of an individual participant(s); or

(2) The name(s) of an entity participant(s) that has a treating provider relationship with the patient whose information is being disclosed; or

(3) A general designation of an individual or entity participant(s) or class of participants that must be limited to a participant(s) who has a treating provider relationship with the patient whose information is being disclosed.

(i) When using a general designation, a statement must be included on the consent form that the patient (or other individual authorized to sign in lieu of the patient), confirms their understanding that, upon their request and consistent with this part, they must be provided a list of entities to which their information has been disclosed pursuant to the general designation (see § 2.13(d)).

(ii) [Reserved]

(5) The purpose of the disclosure. In accordance with § 2.13(a), the disclosure must be limited to that information which is necessary to carry out the stated purpose.

(6) A statement that the consent is subject to revocation at any time except to the extent that the part 2 program or other lawful holder of patient identifying information that is permitted to make the disclosure has already acted in reliance on it. Acting in reliance includes the provision of treatment services in reliance on a valid consent to disclose information to a third-party payer

(7) The date, event, or condition upon which the consent will expire if not revoked before. This date, event, or condition must ensure that the consent will last no longer than reasonably necessary to serve the purpose for which it is provided.

(8) The signature of the patient and, when required for a patient who is a minor, the signature of an individual authorized to give consent under § 2.14; or, when required for a patient who is incompetent or deceased, the signature of an individual authorized to sign under § 2.15. Electronic signatures are permitted to the extent that they are not prohibited by any applicable law.

(9) The date on which the consent is signed.

(b) *Expired, deficient, or false consent.* A disclosure may not be made on the basis of a consent which:

- (1) Has expired;
- (2) On its face substantially fails to conform to any of the requirements set forth in paragraph (a) of this section;
- (3) Is known to have been revoked; or
- (4) Is known, or through reasonable diligence could be known, by the individual or entity holding the records to be materially false.

§ 2.32 Prohibition on re-disclosure.

(a) *Notice to accompany disclosure.* Each disclosure made with the patient's

written consent must be accompanied by the following written statement: This information has been disclosed to you from records protected by federal confidentiality rules (42 CFR part 2). The federal rules prohibit you from making any further disclosure of information in this record that identifies a patient as having or having had a substance use disorder either directly, by reference to publicly available information, or through verification of such identification by another person unless further disclosure is expressly permitted by the written consent of the individual whose information is being disclosed or as otherwise permitted by 42 CFR part 2. A general authorization for the release of medical or other information is *NOT* sufficient for this purpose (see § 2.31). The federal rules restrict any use of the information to investigate or prosecute with regard to a crime any patient with a substance use disorder, except as provided at §§ 2.12(c)(5) and 2.65.

(b) [Reserved]

§ 2.33 Disclosures permitted with written consent.

If a patient consents to a disclosure of their records under § 2.31, a program may disclose those records in accordance with that consent to any person identified in the consent, except that disclosures to central registries and in connection with criminal justice referrals must meet the requirements of §§ 2.34 and 2.35, respectively.

§ 2.34 Disclosures to prevent multiple enrollments.

(a) *Restrictions on disclosure.* A part 2 program, as defined in § 2.11, may disclose patient records to a central registry or to any withdrawal management or maintenance treatment program not more than 200 miles away for the purpose of preventing the multiple enrollment of a patient only if:

- (1) The disclosure is made when:
 - (i) The patient is accepted for treatment;
 - (ii) The type or dosage of the drug is changed; or
 - (iii) The treatment is interrupted, resumed or terminated.
- (2) The disclosure is limited to:
 - (i) Patient identifying information;
 - (ii) Type and dosage of the drug; and
 - (iii) Relevant dates.
- (3) The disclosure is made with the patient's written consent meeting the requirements of § 2.31, except that:

(i) The consent must list the name and address of each central registry and each known withdrawal management or maintenance treatment program to which a disclosure will be made; and

(ii) The consent may authorize a disclosure to any withdrawal management or maintenance treatment program established within 200 miles of the program, but does not need to individually name all programs.

(b) *Use of information limited to prevention of multiple enrollments.* A central registry and any withdrawal management or maintenance treatment program to which information is disclosed to prevent multiple enrollments may not re-disclose or use patient identifying information for any purpose other than the prevention of multiple enrollments unless authorized by a court order under subpart E of this part.

(c) *Permitted disclosure by a central registry to prevent a multiple enrollment.* When a member program asks a central registry if an identified patient is enrolled in another member program and the registry determines that the patient is so enrolled, the registry may disclose:

(1) The name, address, and telephone number of the member program(s) in which the patient is already enrolled to the inquiring member program; and

(2) The name, address, and telephone number of the inquiring member program to the member program(s) in which the patient is already enrolled. The member programs may communicate as necessary to verify that no error has been made and to prevent or eliminate any multiple enrollments.

(d) *Permitted disclosure by a withdrawal management or maintenance treatment program to prevent a multiple enrollment.* A withdrawal management or maintenance treatment program which has received a disclosure under this section and has determined that the patient is already enrolled may communicate as necessary with the program making the disclosure to verify that no error has been made and to prevent or eliminate any multiple enrollments.

§ 2.35 Disclosures to elements of the criminal justice system which have referred patients.

(a) A part 2 program may disclose information about a patient to those individuals within the criminal justice system who have made participation in the part 2 program a condition of the disposition of any criminal proceedings against the patient or of the patient's parole or other release from custody if:

(1) The disclosure is made only to those individuals within the criminal justice system who have a need for the information in connection with their duty to monitor the patient's progress

(e.g., a prosecuting attorney who is withholding charges against the patient, a court granting pretrial or post-trial release, probation or parole officers responsible for supervision of the patient); and

(2) The patient has signed a written consent meeting the requirements of § 2.31 (except paragraph (a)(8) which is inconsistent with the revocation provisions of paragraph (c) of this section) and the requirements of paragraphs (b) and (c) of this section.

(b) *Duration of consent.* The written consent must state the period during which it remains in effect. This period must be reasonable, taking into account:

(1) The anticipated length of the treatment;

(2) The type of criminal proceeding involved, the need for the information in connection with the final disposition of that proceeding, and when the final disposition will occur; and

(3) Such other factors as the part 2 program, the patient, and the individual(s) within the criminal justice system who will receive the disclosure consider pertinent.

(c) *Revocation of consent.* The written consent must state that it is revocable upon the passage of a specified amount of time or the occurrence of a specified, ascertainable event. The time or occurrence upon which consent becomes revocable may be no later than the final disposition of the conditional release or other action in connection with which consent was given.

(d) *Restrictions on re-disclosure and use.* An individual within the criminal justice system who receives patient information under this section may re-disclose and use it only to carry out that individual's official duties with regard to the patient's conditional release or other action in connection with which the consent was given.

Subpart D—Disclosures Without Patient Consent

§ 2.51 Medical emergencies.

(a) *General rule.* Under the procedures required by paragraph (c) of this section, patient identifying information may be disclosed to medical personnel to the extent necessary to meet a bona fide medical emergency in which the patient's prior informed consent cannot be obtained.

(b) *Special rule.* Patient identifying information may be disclosed to medical personnel of the Food and Drug Administration (FDA) who assert a reason to believe that the health of any individual may be threatened by an error in the manufacture, labeling, or sale of a product under FDA

jurisdiction, and that the information will be used for the exclusive purpose of notifying patients or their physicians of potential dangers.

(c) *Procedures.* Immediately following disclosure, the part 2 program shall document, in writing, the disclosure in the patient's records, including:

(1) The name of the medical personnel to whom disclosure was made and their affiliation with any health care facility;

(2) The name of the individual making the disclosure;

(3) The date and time of the disclosure; and

(4) The nature of the emergency (or error, if the report was to FDA).

§ 2.52 Research.

(a) Notwithstanding other provisions of this part, including paragraph (b)(2) of this section, patient identifying information may be disclosed by the part 2 program or other lawful holder of part 2 data, for the purpose of conducting scientific research if the individual designated as director or managing director, or individual otherwise vested with authority to act as chief executive officer or their designee makes a determination that the recipient of the patient identifying information:

(1) If a HIPAA-covered entity or business associate, has obtained and documented authorization from the patient, or a waiver or alteration of authorization, consistent with the HIPAA Privacy Rule at 45 CFR 164.508 or 164.512(i), as applicable; or

(2) If subject to the HHS regulations regarding the protection of human subjects (45 CFR part 46), either provides documentation that the researcher is in compliance with the requirements of the HHS regulations, including the requirements related to informed consent or a waiver of consent (45 CFR 46.111 and 46.116) or that the research qualifies for exemption under the HHS regulations (45 CFR 46.101(b) and any successor regulations; or

(3) If both a HIPAA covered entity or business associate and subject to the HHS regulations regarding the protection of human subjects, has met the requirements of paragraphs (a)(1) and (2) of this section; and

(4) If neither a HIPAA covered entity or business associate or subject to the HHS regulations regarding the protection of human subjects, this section does not apply.

(b) Any individual or entity conducting scientific research using patient identifying information obtained under paragraph (a) of this section:

(1) Is fully bound by the regulations in this part and, if necessary, will resist

in judicial proceedings any efforts to obtain access to patient records except as permitted by the regulations in this part.

(2) Must not re-disclose patient identifying information except back to the individual or entity from whom that patient identifying information was obtained or as permitted under paragraph (c) of this section.

(3) May include part 2 data in research reports only in aggregate form in which patient identifying information has been rendered non-identifiable such that the information cannot be re-identified and serve as an unauthorized means to identify a patient, directly or indirectly, as having or having had a substance use disorder.

(4) Must maintain and destroy patient identifying information in accordance with the security policies and procedures established under § 2.16.

(5) Must retain records in compliance with applicable federal, state, and local record retention laws.

(c) *Data linkages—(1) Researchers.* Any individual or entity conducting scientific research using patient identifying information obtained under paragraph (a) of this section that requests linkages to data sets from a data repository(-ies) holding patient identifying information must:

(i) Have the request reviewed and approved by an Institutional Review Board (IRB) registered with the Department of Health and Human Services, Office for Human Research Protections in accordance with 45 CFR part 46 to ensure that patient privacy is considered and the need for identifiable data is justified. Upon request, the researcher may be required to provide evidence of the IRB approval of the research project that contains the data linkage component.

(ii) Ensure that patient identifying information obtained under paragraph (a) of this section is not provided to law enforcement agencies or officials.

(2) *Data repositories.* For purposes of this section, a data repository is fully bound by the provisions of part 2 upon receipt of the patient identifying data and must:

(i) After providing the researcher with the linked data, destroy or delete the linked data from its records, including sanitizing any associated hard copy or electronic media, to render the patient identifying information non-retrievable in a manner consistent with the policies and procedures established under § 2.16 Security for records.

(ii) Ensure that patient identifying information obtained under paragraph (a) of this section is not provided to law enforcement agencies or officials.

(2) Except as provided in paragraph (c) of this section, a researcher may not redisclose patient identifying information for data linkages purposes.

§ 2.53 Audit and evaluation.

(a) *Records not copied or removed.* If patient records are not downloaded, copied or removed from the part 2 program premises or forwarded electronically to another electronic system or device, patient identifying information, as defined in § 2.11, may be disclosed in the course of a review of records on the part 2 program premises to any individual or entity who agrees in writing to comply with the limitations on re-disclosure and use in paragraph (d) of this section and who:

(1) Performs the audit or evaluation on behalf of:

(i) Any federal, state, or local government agency which provides financial assistance to the part 2 program or is authorized by law to regulate its activities; or

(ii) Any individual or entity who provides financial assistance to the part 2 program, which is a third-party payer covering patients in the part 2 program, or which is a quality improvement organization performing a utilization or quality control review; or

(2) Is determined by the part 2 program to be qualified to conduct an audit or evaluation of the part 2 program.

(b) *Copying, removing, downloading, or forwarding patient records.* Records containing patient identifying information, as defined in § 2.11, may be copied or removed from a part 2 program premises or downloaded or forwarded to another electronic system or device from the part 2 program's electronic records by any individual or entity who:

(1) Agrees in writing to:

(i) Maintain and destroy the patient identifying information in a manner consistent with the policies and procedures established under § 2.16;

(ii) Retain records in compliance with applicable federal, state, and local record retention laws; and

(iii) Comply with the limitations on disclosure and use in paragraph (d) of this section; and

(2) Performs the audit or evaluation on behalf of:

(i) Any federal, state, or local government agency which provides financial assistance to the part 2 program or is authorized by law to regulate its activities; or

(ii) Any individual or entity who provides financial assistance to the part 2 program, which is a third-party payer covering patients in the part 2 program,

or which is a quality improvement organization performing a utilization or quality control review.

(c) *Medicare, Medicaid, Children's Health Insurance Program (CHIP), or related audit or evaluation.* (1) Patient identifying information, as defined in § 2.11, may be disclosed under paragraph (c) of this section to any individual or entity for the purpose of conducting a Medicare, Medicaid, or CHIP audit or evaluation, including an audit or evaluation necessary to meet the requirements for a Centers for Medicare & Medicaid Services (CMS)-regulated accountable care organization (CMS-regulated ACO) or similar CMS-regulated organization (including a CMS-regulated Qualified Entity (QE)), if the individual or entity agrees in writing to comply with the following:

(i) Maintain and destroy the patient identifying information in a manner consistent with the policies and procedures established under § 2.16;

(ii) Retain records in compliance with applicable federal, state, and local record retention laws; and

(iii) Comply with the limitations on disclosure and use in paragraph (d) of this section.

(2) A Medicare, Medicaid, or CHIP audit or evaluation under this section includes a civil or administrative investigation of a part 2 program by any federal, state, or local government agency with oversight responsibilities for Medicare, Medicaid, or CHIP and includes administrative enforcement, against the part 2 program by the government agency, of any remedy authorized by law to be imposed as a result of the findings of the investigation.

(3) An audit or evaluation necessary to meet the requirements for a CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE) must be conducted in accordance with the following:

(i) A CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE) must:

(A) Have in place administrative and/or clinical systems; and

(B) Have in place a leadership and management structure, including a governing body and chief executive officer with responsibility for oversight of the organization's management and for ensuring compliance with and adherence to the terms and conditions of the Participation Agreement or similar documentation with CMS; and

(ii) A CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE) must have a signed Participation Agreement or similar documentation with CMS, which

provides that the CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE):

(A) Is subject to periodic evaluations by CMS or its agents, or is required by CMS to evaluate participants in the CMS-regulated ACO or similar CMS-regulated organization (including a CMS-regulated QE) relative to CMS-defined or approved quality and/or cost measures;

(B) Must designate an executive who has the authority to legally bind the organization to ensure compliance with 42 U.S.C. 290dd-2 and this part and the terms and conditions of the Participation Agreement in order to receive patient identifying information from CMS or its agents;

(C) Agrees to comply with all applicable provisions of 42 U.S.C. 290dd-2 and this part;

(D) Must ensure that any audit or evaluation involving patient identifying information occurs in a confidential and controlled setting approved by the designated executive;

(E) Must ensure that any communications or reports or other documents resulting from an audit or evaluation under this section do not allow for the direct or indirect identification (e.g., through the use of codes) of a patient as having or having had a substance use disorder; and

(F) Must establish policies and procedures to protect the confidentiality of the patient identifying information consistent with this part, the terms and conditions of the Participation Agreement, and the requirements set forth in paragraph (c)(1) of this section.

(4) Program, as defined in § 2.11, includes an employee of, or provider of medical services under the program when the employee or provider is the subject of a civil investigation or administrative remedy, as those terms are used in paragraph (c)(2) of this section.

(5) If a disclosure to an individual or entity is authorized under this section for a Medicare, Medicaid, or CHIP audit or evaluation, including a civil investigation or administrative remedy, as those terms are used in paragraph (c)(2) of this section, then a quality improvement organization which obtains the information under paragraph (a) or (b) of this section may disclose the information to that individual or entity but only for the purpose of conducting a Medicare, Medicaid, or CHIP audit or evaluation.

(6) The provisions of this paragraph do not authorize the part 2 program, the federal, state, or local government agency, or any other individual or entity to disclose or use patient identifying

information obtained during the audit or evaluation for any purposes other than those necessary to complete the audit or evaluation as specified in paragraph (c) of this section.

(d) *Limitations on disclosure and use.* Except as provided in paragraph (c) of this section, patient identifying information disclosed under this section may be disclosed only back to the program from which it was obtained and used only to carry out an audit or evaluation purpose or to investigate or prosecute criminal or other activities, as authorized by a court order entered under § 2.66.

Subpart E—Court Orders Authorizing Disclosure and Use

§ 2.61 Legal effect of order.

(a) *Effect.* An order of a court of competent jurisdiction entered under this subpart is a unique kind of court order. Its only purpose is to authorize a disclosure or use of patient information which would otherwise be prohibited by 42 U.S.C. 290dd–2 and the regulations in this part. Such an order does not compel disclosure. A subpoena or a similar legal mandate must be issued in order to compel disclosure. This mandate may be entered at the same time as and accompany an authorizing court order entered under the regulations in this part.

(b) *Examples.* (1) A person holding records subject to the regulations in this part receives a subpoena for those records. The person may not disclose the records in response to the subpoena unless a court of competent jurisdiction enters an authorizing order under the regulations in this part.

(2) An authorizing court order is entered under the regulations in this part, but the person holding the records does not want to make the disclosure. If there is no subpoena or other compulsory process or a subpoena for the records has expired or been quashed, that person may refuse to make the disclosure. Upon the entry of a valid subpoena or other compulsory process the person holding the records must disclose, unless there is a valid legal defense to the process other than the confidentiality restrictions of the regulations in this part.

§ 2.62 Order not applicable to records disclosed without consent to researchers, auditors and evaluators.

A court order under the regulations in this part may not authorize qualified personnel, who have received patient identifying information without consent for the purpose of conducting research, audit or evaluation, to disclose that

information or use it to conduct any criminal investigation or prosecution of a patient. However, a court order under § 2.66 may authorize disclosure and use of records to investigate or prosecute qualified personnel holding the records.

§ 2.63 Confidential communications.

(a) A court order under the regulations in this part may authorize disclosure of confidential communications made by a patient to a part 2 program in the course of diagnosis, treatment, or referral for treatment only if:

(1) The disclosure is necessary to protect against an existing threat to life or of serious bodily injury, including circumstances which constitute suspected child abuse and neglect and verbal threats against third parties;

(2) The disclosure is necessary in connection with investigation or prosecution of an extremely serious crime allegedly committed by the patient, such as one which directly threatens loss of life or serious bodily injury, including homicide, rape, kidnapping, armed robbery, assault with a deadly weapon, or child abuse and neglect; or

(3) The disclosure is in connection with litigation or an administrative proceeding in which the patient offers testimony or other evidence pertaining to the content of the confidential communications.

(b) [Reserved]

§ 2.64 Procedures and criteria for orders authorizing disclosures for noncriminal purposes.

(a) *Application.* An order authorizing the disclosure of patient records for purposes other than criminal investigation or prosecution may be applied for by any person having a legally recognized interest in the disclosure which is sought. The application may be filed separately or as part of a pending civil action in which the applicant asserts that the patient records are needed to provide evidence. An application must use a fictitious name, such as John Doe, to refer to any patient and may not contain or otherwise disclose any patient identifying information unless the patient is the applicant or has given written consent (meeting the requirements of the regulations in this part) to disclosure or the court has ordered the record of the proceeding sealed from public scrutiny.

(b) *Notice.* The patient and the person holding the records from whom disclosure is sought must be provided:

(1) Adequate notice in a manner which does not disclose patient

identifying information to other persons; and

(2) An opportunity to file a written response to the application, or to appear in person, for the limited purpose of providing evidence on the statutory and regulatory criteria for the issuance of the court order as described in § 2.64(d).

(c) *Review of evidence: Conduct of hearing.* Any oral argument, review of evidence, or hearing on the application must be held in the judge's chambers or in some manner which ensures that patient identifying information is not disclosed to anyone other than a party to the proceeding, the patient, or the person holding the record, unless the patient requests an open hearing in a manner which meets the written consent requirements of the regulations in this part. The proceeding may include an examination by the judge of the patient records referred to in the application.

(d) *Criteria for entry of order.* An order under this section may be entered only if the court determines that good cause exists. To make this determination the court must find that:

(1) Other ways of obtaining the information are not available or would not be effective; and

(2) The public interest and need for the disclosure outweigh the potential injury to the patient, the physician-patient relationship and the treatment services.

(e) *Content of order.* An order authorizing a disclosure must:

(1) Limit disclosure to those parts of the patient's record which are essential to fulfill the objective of the order;

(2) Limit disclosure to those persons whose need for information is the basis for the order; and

(3) Include such other measures as are necessary to limit disclosure for the protection of the patient, the physician-patient relationship and the treatment services; for example, sealing from public scrutiny the record of any proceeding for which disclosure of a patient's record has been ordered.

§ 2.65 Procedures and criteria for orders authorizing disclosure and use of records to criminally investigate or prosecute patients.

(a) *Application.* An order authorizing the disclosure or use of patient records to investigate or prosecute a patient in connection with a criminal proceeding may be applied for by the person holding the records or by any law enforcement or prosecutorial officials who are responsible for conducting investigative or prosecutorial activities with respect to the enforcement of criminal laws. The application may be

filed separately, as part of an application for a subpoena or other compulsory process, or in a pending criminal action. An application must use a fictitious name such as John Doe, to refer to any patient and may not contain or otherwise disclose patient identifying information unless the court has ordered the record of the proceeding sealed from public scrutiny.

(b) *Notice and hearing.* Unless an order under § 2.66 is sought in addition to an order under this section, the person holding the records must be provided:

(1) Adequate notice (in a manner which will not disclose patient identifying information to other persons) of an application by a law enforcement agency or official;

(2) An opportunity to appear and be heard for the limited purpose of providing evidence on the statutory and regulatory criteria for the issuance of the court order as described in § 2.65(d); and

(3) An opportunity to be represented by counsel independent of counsel for an applicant who is a law enforcement agency or official.

(c) *Review of evidence: Conduct of hearings.* Any oral argument, review of evidence, or hearing on the application shall be held in the judge's chambers or in some other manner which ensures that patient identifying information is not disclosed to anyone other than a party to the proceedings, the patient, or the person holding the records. The proceeding may include an examination by the judge of the patient records referred to in the application.

(d) *Criteria.* A court may authorize the disclosure and use of patient records for the purpose of conducting a criminal investigation or prosecution of a patient only if the court finds that all of the following criteria are met:

(1) The crime involved is extremely serious, such as one which causes or directly threatens loss of life or serious bodily injury including homicide, rape, kidnapping, armed robbery, assault with a deadly weapon, and child abuse and neglect.

(2) There is a reasonable likelihood that the records will disclose information of substantial value in the investigation or prosecution.

(3) Other ways of obtaining the information are not available or would not be effective.

(4) The potential injury to the patient, to the physician-patient relationship and to the ability of the part 2 program to provide services to other patients is outweighed by the public interest and the need for the disclosure.

(5) If the applicant is a law enforcement agency or official, that:

(i) The person holding the records has been afforded the opportunity to be represented by independent counsel; and

(ii) Any person holding the records which is an entity within federal, state, or local government has in fact been represented by counsel independent of the applicant.

(e) *Content of order.* Any order authorizing a disclosure or use of patient records under this section must:

(1) Limit disclosure and use to those parts of the patient's record which are essential to fulfill the objective of the order;

(2) Limit disclosure to those law enforcement and prosecutorial officials who are responsible for, or are conducting, the investigation or prosecution, and limit their use of the records to investigation and prosecution of the extremely serious crime or suspected crime specified in the application; and

(3) Include such other measures as are necessary to limit disclosure and use to the fulfillment of only that public interest and need found by the court.

§ 2.66 Procedures and criteria for orders authorizing disclosure and use of records to investigate or prosecute a part 2 program or the person holding the records.

(a) *Application.* (1) An order authorizing the disclosure or use of patient records to investigate or prosecute a part 2 program or the person holding the records (or employees or agents of that part 2 program or person holding the records) in connection with a criminal or administrative matter may be applied for by any administrative, regulatory, supervisory, investigative, law enforcement, or prosecutorial agency having jurisdiction over the program's or person's activities.

(2) The application may be filed separately or as part of a pending civil or criminal action against a part 2 program or the person holding the records (or agents or employees of the part 2 program or person holding the records) in which the applicant asserts that the patient records are needed to provide material evidence. The application must use a fictitious name, such as John Doe, to refer to any patient and may not contain or otherwise disclose any patient identifying information unless the court has ordered the record of the proceeding sealed from public scrutiny or the patient has provided written consent (meeting the requirements of § 2.31) to that disclosure.

(b) *Notice not required.* An application under this section may, in

the discretion of the court, be granted without notice. Although no express notice is required to the part 2 program, to the person holding the records, or to any patient whose records are to be disclosed, upon implementation of an order so granted any of the above persons must be afforded an opportunity to seek revocation or amendment of that order, limited to the presentation of evidence on the statutory and regulatory criteria for the issuance of the court order in accordance with § 2.66(c).

(c) *Requirements for order.* An order under this section must be entered in accordance with, and comply with the requirements of, paragraphs (d) and (e) of § 2.64.

(d) *Limitations on disclosure and use of patient identifying information.* (1) An order entered under this section must require the deletion of patient identifying information from any documents made available to the public.

(2) No information obtained under this section may be used to conduct any investigation or prosecution of a patient in connection with a criminal matter, or be used as the basis for an application for an order under § 2.65.

§ 2.67 Orders authorizing the use of undercover agents and informants to investigate employees or agents of a part 2 program in connection with a criminal matter.

(a) *Application.* A court order authorizing the placement of an undercover agent or informant in a part 2 program as an employee or patient may be applied for by any law enforcement or prosecutorial agency which has reason to believe that employees or agents of the part 2 program are engaged in criminal misconduct.

(b) *Notice.* The part 2 program director must be given adequate notice of the application and an opportunity to appear and be heard (for the limited purpose of providing evidence on the statutory and regulatory criteria for the issuance of the court order in accordance with § 2.67(c)), unless the application asserts that:

(1) The part 2 program director is involved in the suspected criminal activities to be investigated by the undercover agent or informant; or

(2) The part 2 program director will intentionally or unintentionally disclose the proposed placement of an undercover agent or informant to the employees or agents of the program who are suspected of criminal activities.

(c) *Criteria.* An order under this section may be entered only if the court determines that good cause exists. To

make this determination the court must find all of the following:

(1) There is reason to believe that an employee or agent of the part 2 program is engaged in criminal activity;

(2) Other ways of obtaining evidence of the suspected criminal activity are not available or would not be effective; and

(3) The public interest and need for the placement of an undercover agent or informant in the part 2 program outweigh the potential injury to patients of the part 2 program, physician-patient relationships and the treatment services.

(d) *Content of order.* An order authorizing the placement of an undercover agent or informant in a part 2 program must:

(1) Specifically authorize the placement of an undercover agent or an informant;

(2) Limit the total period of the placement to six months;

(3) Prohibit the undercover agent or informant from disclosing any patient identifying information obtained from the placement except as necessary to investigate or prosecute employees or agents of the part 2 program in connection with the suspected criminal activity; and

(4) Include any other measures which are appropriate to limit any potential disruption of the part 2 program by the placement and any potential for a real or apparent breach of patient confidentiality; for example, sealing from public scrutiny the record of any

proceeding for which disclosure of a patient's record has been ordered.

(e) *Limitation on use of information.* No information obtained by an undercover agent or informant placed in a part 2 program under this section may be used to investigate or prosecute any patient in connection with a criminal matter or as the basis for an application for an order under § 2.65.

Dated: December 20, 2016.

Kana Enomoto,

Acting Deputy Assistant Secretary for Mental Health and Substance Use.

Sylvia M. Burwell,

Secretary.

Title 3—

Proclamation 9563 of January 12, 2017

The President

Boundary Enlargement of the California Coastal National Monument

By The President of the United States of America

A Proclamation

Through Proclamation 7264 of January 11, 2000, President Clinton established the California Coastal National Monument (monument) to protect the biological treasures situated on thousands of unappropriated or unreserved islands, rocks, exposed reefs, and pinnacles owned or controlled by the Government of the United States within 12 nautical miles of the shoreline of the State of California. Presidential Proclamation 9089, issued on March 11, 2014, expanded the monument to include the Point Arena-Stornetta Public Lands, a landscape of coastal bluffs and shelves, tide pools, onshore dunes, coastal prairies, and riverbanks, and the mouth and estuary of the Garcia River. In addition to providing vital habitat for wildlife, these coastal lands were critical for the native peoples who first lived along the California Coast, and they continue to be treasured by modern generations.

Six other spectacular areas along the California Coast contain significant scientific or historic resources that are closely tied to the values of the monument. Like the protections afforded by prior proclamations, protection of Trinidad Head, Waluplh-Lighthouse Ranch, Lost Coast Headlands, Cotoni-Coast Dairies, Piedras Blancas, and Orange County Rocks and Islands would protect and preserve objects of historic or scientific interest on the California Coast.

Trinidad Head

About 30 miles north of Eureka lies the majestic and culturally important promontory known as Trinidad Head. The tip of Trinidad Head encompasses several prominent historic sites along with the rocky ledges that provide their setting, such as the Trinidad Head Light Station, which first operated in 1871 and is still active today. Accompanied by a small wooden bell house, it sits atop sheer cliffs overlooking crashing waves and rugged sea stacks. The importance of this location predated its first use as a lighthouse. Nearly 100 years earlier, on June 9, 1775, representatives of the local Yurok community first made contact with two Spanish ships there. A granite cross installed in 1913 sits in a clearing above the lighthouse, commemorating the spot where the Spanish erected a wooden cross two days later to claim the area for King Charles III. Today, the area is culturally and spiritually significant to the Cher-Ae Heights Indian Community of the Trinidad Rancheria, the Yurok Tribe, and the Tsurai Ancestral Society.

Coastal bluff scrub vegetation, including coyote brush, California wax myrtle, salal, blue blossom, ocean spray, and evergreen huckleberry, surrounds these historic features. Scattered stands of Sitka spruce, Douglas fir, and red alder stand out among these native shrubs and herbs. Coast Indian paintbrush grows in rocky outcroppings near the bell house, adding splashes of crimson to the landscape. Visitors to Trinidad Head enjoy observing the Trinidad seabird colony, which makes its home on the rocks and islands off the coast of Trinidad Head and contains over 75,000 birds, including several species of cormorant, the common murre, and occasionally tufted puffins.

Waluplh-Lighthouse Ranch

Perched on the edge of Table Bluff, 12 miles south of Eureka, Waluplh-Lighthouse Ranch has spectacular panoramic views of the Pacific Ocean, Eel River Delta, and the south spit of Humboldt Bay. In addition to outstanding scenery, visitors to Waluplh-Lighthouse Ranch can view migratory raptors, songbirds, and the endangered marbled murrelet.

Waluplh-Lighthouse Ranch is part of the ancestral home and current cultural traditions of the Wiyot Tribe, who gave it the name Waluplh. With its expansive views, the area served as a lookout point for the Tribe, as well as a crossroads for trails connecting inland areas with Humboldt Bay to the north and the bottomlands surrounding the mouth of the Eel River to the south. Beginning in the late 1800s, Waluplh-Lighthouse Ranch was developed as a Coast Guard facility, and during World War II, it served as a coastal lookout post and the base for a mounted beach patrol. There are no longer any buildings on the property, so visitors now enjoy its panoramic views surrounded by open space.

Lost Coast Headlands

Thirteen miles south of Waluplh-Lighthouse Ranch, the Lost Coast Headlands present a majestic coastline, encompassing rolling hills and dramatically eroding bluffs, punctuated by freshwater creeks, ponds, and pockets of forests. Underlying the Lost Coast Headlands are layers of highly erodible sedimentary rock known as the Wildcat Group. This geology has weathered over the years, leading to deeply carved and incised bluffs along the beach made up of multi-hued layers of gray clay, golden sandstone, and brown siltstone. The eroding of the bluffs over time exposes fossils of scallops, clams, and snails, providing a glimpse of the marine fauna that lived in the area during the Pleistocene Epoch 2.6 million to 11,700 years ago.

Coastal scrub vegetation and open grasslands blanket the area's rolling hills. Coyote brush and California blackberry dominate, and in the grasslands, small patches of native Pacific reed grass meadow remain. Pockets of Douglas fir, Sitka spruce, and grand fir shadow the eroded draws. These diverse habitats support an array of wildlife species, including black-tailed deer, bobcat, brush rabbit, and Douglas squirrel. While more elusive, gray fox, coyote, and mountain lion also pass through the area, and a careful observer may notice signs of their presence. A variety of small birds dart about its grasslands and scrub, while raptors such as American kestrels, northern harriers, peregrine falcons, and Cooper's hawks scan for prey overhead. Quiet visitors may hear hairy woodpeckers in the forested draws. Foraging shorebirds and gulls, along with the occasional harbor seal, can be observed on the narrow beaches.

Buffered by red alder and willow, Guthrie and Fleener creeks wind their way through the Lost Coast Headlands on their way to the sea. Both perennial streams provide habitat for three-spined stickleback, a small native fish. Sculpin, Pacific lamprey, and the threatened Northern California steelhead have also been observed in Guthrie Creek, and both creeks are potential habitat for the threatened coho salmon. During the summer, the mouth of Guthrie Creek widens into a lagoon that can provide shelter for estuary-dependent fish and invertebrates. The area also features three small, freshwater ponds that provide habitat for the threatened California red-legged frog and a variety of waterfowl, including green-winged teals.

While few signs of it remain, the northernmost point of the Lost Coast Headlands was once the site of the Centerville Beach Naval Facility, established in 1958 to monitor Soviet submarines during the Cold War. For more than 100 years, several families who settled nearby grazed livestock in the area.

Cotoni-Coast Dairies

Near Davenport in Santa Cruz County, Cotoni-Coast Dairies extends from the steep slopes of the Santa Cruz Mountains to the marine coastal terraces overlooking the Pacific Ocean. Sitting atop the soft Santa Cruz Mudstone

Formation and the hard, silica-rich Monterey Formation, the area's bedrock supports a diversity of soils and vegetation that have sustained wildlife and people alike for millennia.

Dating back at least 10,000 years, an ancestral group known to archaeologists as the Costanoan or Coastal People (also called the Ohlone) lived in this region, and the Cotoni, a tribelet of this group, lived in the Cotoni-Coast Dairies area. Lithic scatter sites and shell middens demonstrate that inhabitants moved between the coastal ecological zones and upland environments, making use of the landscape's diverse resources. Europeans first made contact with the Cotoni in the 1600s and 1700s. Most of the Costanoan people were converted to Christianity, many forcibly, during California's Mission period in the late 1700s and 1800s, and by the early 1900s, much of the ancient cultural heritage of the Coastal People was left only to memory.

Six perennial streams form the heart of Cotoni-Coast Dairies' ecosystem, flowing from the coastal mountains down to the Pacific Ocean. Molino Creek, Ferrari Creek, San Vicente Creek, Liddell Creek, Yellow Bank Creek, and Laguna Creek have each carved steep canyons on their path to the sea. Vibrant riparian areas follow along the six stream corridors, with red alder and arroyo willow forests dominating the vegetative community. A seventh stream, Scott Creek, flows along a small portion of the area's northern boundary. Most of the area's wetlands can be found within these riparian corridors, though others exist in meadows and floodplains.

Beyond supporting riparian and wetland communities, Cotoni-Coast Dairies' waterways provide important habitat for anadromous and freshwater fish. All of the streams are thought to have historically supported salmon populations. Today, the threatened steelhead and coho salmon can be found on spawning runs in San Vicente Creek, while steelhead are also found in Liddell Creek and Laguna Creek. The endangered tidewater goby may also be found in the tidally influenced portion of Laguna Creek. The threatened California red-legged frog uses many of the waterways and water sources here, along with a wide range of other amphibians and reptiles.

Grasslands, scrublands, woodlands, and forests surround the riparian corridors in Cotoni-Coast Dairies. Purple needlegrass and other native species, such as California oatgrass and blue wildrye, characterize the coastal prairie grassland community. The intermixed wildflowers in the community provide visitors a colorful display in the spring and early summer. Occasional freshwater seeps amid the grasslands support sedges, California buttercup, brown-headed rush, and other species.

California sagebrush and coyote brush scrub communities blanket the area's bluffs and hillside slopes. Native trees, including Douglas fir and coast live oak, dominate forests, which also include stands of coastal trees such as madrone, California bay, Monterey pine, and knobcone pine. Visitors are drawn to stands of coast redwood, which thrive on the north-facing slopes in some watersheds, accompanied by redwood sorrel, elk clover, and other understory species.

The diversity of the uplands vegetation in Cotoni-Coast Dairies supports a rich wildlife community including a vast and varied mammalian population. Among the many species inhabiting Cotoni-Coast Dairies are California voles, dusky-footed woodrats, black-tailed jackrabbits, mule deer, and gray fox. Evidence also suggests that both bobcats and mountain lions hunt here.

Visitors to Cotoni-Coast Dairies may be able to catch a glimpse of a variety of avian species, including black swifts, orange crowned warblers, American kestrels, Cooper's hawks, white-tailed kites, and peregrine falcons. In the riparian areas, one may encounter Wilson's warblers, downy woodpeckers, and tree swallows, among others. Various bat species, including the Townsend's big-eared bat, can be seen darting overhead at dusk.

Piedras Blancas

Only 40 miles north of San Luis Obispo, the large white coastal rocks for which Piedras Blancas was named have served as a landmark for centuries to explorers and traders along the central coast of California. Sitting at a cultural interface between Northern Chumash and Playanos Salinan peoples, Piedras Blancas was and still remains important to Native Americans. The human history of the area stretches back at least 3,000 years, and archaeologists have found stone tools, debris from tool knapping, discrete quarrying locations, and shell midden deposits that help tell that history. Native peoples largely used the area as a source of raw stone and for the manufacture of stone tools.

In 1542, the Spanish explorer Juan Rodriquez Cabrillo noted the value of this area as a maritime guidepost, and the land he sighted from his ship was later claimed by the Spanish, followed by the Governor of Mexico, and subsequently became part of the United States. A lighthouse built in the 1870s still stands today, albeit without the three upper levels that were removed after being damaged by an earthquake in 1948. The lighthouse, with its ornate brick and cast-iron structure, is listed in the National Register of Historic Places along with its surrounding buildings, such as the 1906 fog-signal and oil house. Visitors to Piedras Blancas today are treated to unmatched scenic vistas of the rugged mountain peaks of the Santa Lucia Range and the deep blue waters of the Pacific Ocean. Dramatic geologic features, such as the namesake white rocks, along with the area's characteristic fog, contribute to a dynamic visual landscape.

The bedrock in the area consists of both sedimentary and volcanic rocks of the Franciscan Formation. This Formation represents Jurassic age material from the Pacific Plate that scraped off and attached to the continental margin of North America. Atop the bedrock lie Monterey Formation rocks, topped with marine terrace deposits. Rain percolates through the rock surface and sub-surface and emerges dramatically as ephemeral springs from cliff faces.

California sea lions, harbor seals, and northern elephant seals all spend time on the shores and within the waters of this area. Visitors may observe colonies of massive elephant seals loafing in the sun at Piedras Blancas, where females can be seen nursing their pups, and males occasionally battle for dominance. For decades, scientists have used this land to conduct annual censuses of the threatened southern sea otter and other marine mammals. From the mainland of Piedras Blancas, visitors can also be treated to regular visits by migrating gray and humpback whales, and occasionally blue, minke, and killer whales as well, in addition to bottlenose dolphins.

Marine birds perched on or soaring over the Piedras Blancas rocks include Brandt's cormorants, black oystercatchers, peregrine falcons, and brown pelicans. In a remarkable spring display, Pacific loons can be seen migrating offshore of Piedras Blancas by the tens of thousands. In the rocky intertidal zone found along these shores, scientists have documented mussels, ochre starfish, barnacles, sea anemones, and black and red abalones.

The lighthouse's windswept onshore point is also a sanctuary for plants and wildlife. Over 70 types of native plants, including members from the agave, cashew, sunflower, carnation, morning glory, gourd, iris, and poppy families, establish a foothold in the fine sand and fine sandy loam soils. Together this diversity of vegetation can be characterized as northern coastal bluff scrub. If visitors time their visit, they will be treated to a dazzling array of blooms from species such as seaside poppy, seaside daisy, coastal bush lupine, hedge nettle, dune buckwheat, and compact cobwebby thistle. This native vegetation supports many wildlife species, including brush rabbits, California voles, dusky-footed woodrats, and bobcats. Black-bellied slender salamanders, threatened red-legged frogs, western terrestrial garter snakes, and other reptiles and amphibians thrive in the Piedras Blancas area.

Orange County Rocks and Islands

This area consists of a series of offshore rocks, pinnacles, exposed reefs, and small islands off the Orange County coastline, where visitors onshore

are treated to dramatic crashing waves, unique geology, and an abundance of marine-dependent wildlife. These rocks and islands lie within the current monument boundary but were not previously reserved as part of the monument. These offshore rocks, many in pocket coves, contribute to the rugged beauty of the Orange County coastline and themselves include objects of scientific and historic interest. The features also provide important connectivity from south to north for shore birds and sea birds, as well as for California sea lions and harbor seals.

Cormorants, brown pelicans, gulls, and a variety of other shore birds and sea birds can be seen roosting, resting, and feeding on the jagged rocks and small islands. These rocks and islands are also haul-out areas for marine mammals, including California sea lions, harbor seals, and the occasional northern elephant seal.

Rich in vital nutrients, this offshore zone of swirling currents supports a variety of habitats and organisms. The tide pools around these rocks and islands are home to a diversity of hardy intertidal seaweeds and animal species uniquely adapted for survival within the alternating and equally harsh environs of pounding surf and baking sun.

The protection of Trinidad Head, Waluplh-Lighthouse Ranch, Lost Coast Headlands, Cotoni-Coast Dairies, Piedras Blancas, and Orange County Rocks and Islands as part of the California Coastal National Monument will preserve their cultural, prehistoric, and historic legacy and maintain their diverse array of natural and scientific resources, ensuring that the historic and scientific value of these areas, and their numerous objects of historic or scientific interest, remain for the benefit of all Americans.

WHEREAS, section 320301 of title 54, United States Code (known as the "Antiquities Act"), authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected;

WHEREAS, it is in the public interest to preserve the objects of scientific and historic interest on the public lands of Trinidad Head, Waluplh-Lighthouse Ranch, Lost Coast Headlands, Cotoni-Coast Dairies, Piedras Blancas, and Orange County Rocks and Islands;

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the Federal Government to be part of the California Coastal National Monument and, for the purpose of protecting those objects, reserve as part thereof all lands and interests in lands owned or controlled by the Federal Government within the boundaries described on the accompanying maps, which are attached hereto and form a part of this proclamation. The Orange County Rocks and Islands shall be managed as part of the original offshore area of the monument, and the remainder of the lands shall be known as the Trinidad Head, Waluplh-Lighthouse Ranch, Lost Coast Headlands, Cotoni-Coast Dairies, and Piedras Blancas units of the monument, respectively. These reserved Federal lands and interests in lands encompass approximately 6,230 acres. The boundaries described on the accompanying maps are confined to the smallest area compatible with the proper care and management of the objects to be protected.

All Federal lands and interests in lands within the boundaries described on the accompanying maps are hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or other disposition under the public land laws, from location, entry, and patent under the mining laws, and from disposition under all laws relating to mineral and geothermal

leasing, other than by exchange that furthers the protective purposes of the monument.

The enlargement of the boundary is subject to valid existing rights. If the Federal Government subsequently acquires any lands or interests in lands not owned or controlled by the Federal Government within the boundaries described on the accompanying maps, such lands and interests in lands shall be reserved as a part of the monument, and objects identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

The Secretary of the Interior (Secretary) shall manage the area being added to the monument through the Bureau of Land Management (BLM) as a unit of the National Landscape Conservation System, pursuant to applicable legal authorities, to protect the objects identified above.

The Cotoni-Coast Dairies unit of the monument shall become available for public access upon completion of a management plan by the BLM, consistent with the care and management of the objects identified above.

Consistent with the care and management of the objects identified above, and except for emergency or authorized administrative purposes, motorized vehicle use in areas being added to the monument shall be permitted only on designated roads, and non-motorized mechanized vehicle use shall be permitted only on designated roads and trails.

Nothing in this proclamation shall be construed to interfere with the operation or maintenance, or the replacement or modification within the existing authorization boundary, of existing weather station, navigation, transportation, utility, pipeline, or telecommunications facilities located on the lands added to the monument in a manner consistent with the care and management of the objects to be protected. Other rights-of-way shall be authorized only if they are necessary for the care and management of the objects to be protected.

Nothing in this proclamation shall be deemed to enlarge or diminish the rights or jurisdiction of any Indian tribe. The Secretary shall, to the maximum extent permitted by law and in consultation with Indian tribes, ensure the protection of Indian sacred sites and traditional cultural properties in the monument and provide access by members of Indian tribes for traditional cultural and customary uses, consistent with the American Indian Religious Freedom Act (42 U.S.C. 1996) and Executive Order 13007 of May 24, 1996 (Indian Sacred Sites).

Laws, regulations, and policies followed by the BLM in issuing and administering grazing permits or leases on lands under its jurisdiction shall continue to apply with regard to the lands added to the monument, consistent with the care and management of the objects identified above.

Nothing in this proclamation shall be deemed to enlarge or diminish the jurisdiction of the State of California or the United States over submerged or other lands within the territorial waters off the coast of California, nor shall it otherwise enlarge or diminish the jurisdiction or authority of the State of California, including its jurisdiction and authority with respect to fish and wildlife management.

Nothing in this proclamation shall affect the rights or obligations of any State or Federal oil or gas lessee within the territorial waters off the California Coast.

Nothing in this proclamation shall be construed to alter the authority or responsibility of any party with respect to emergency response activities within the monument, including wildland fire response.

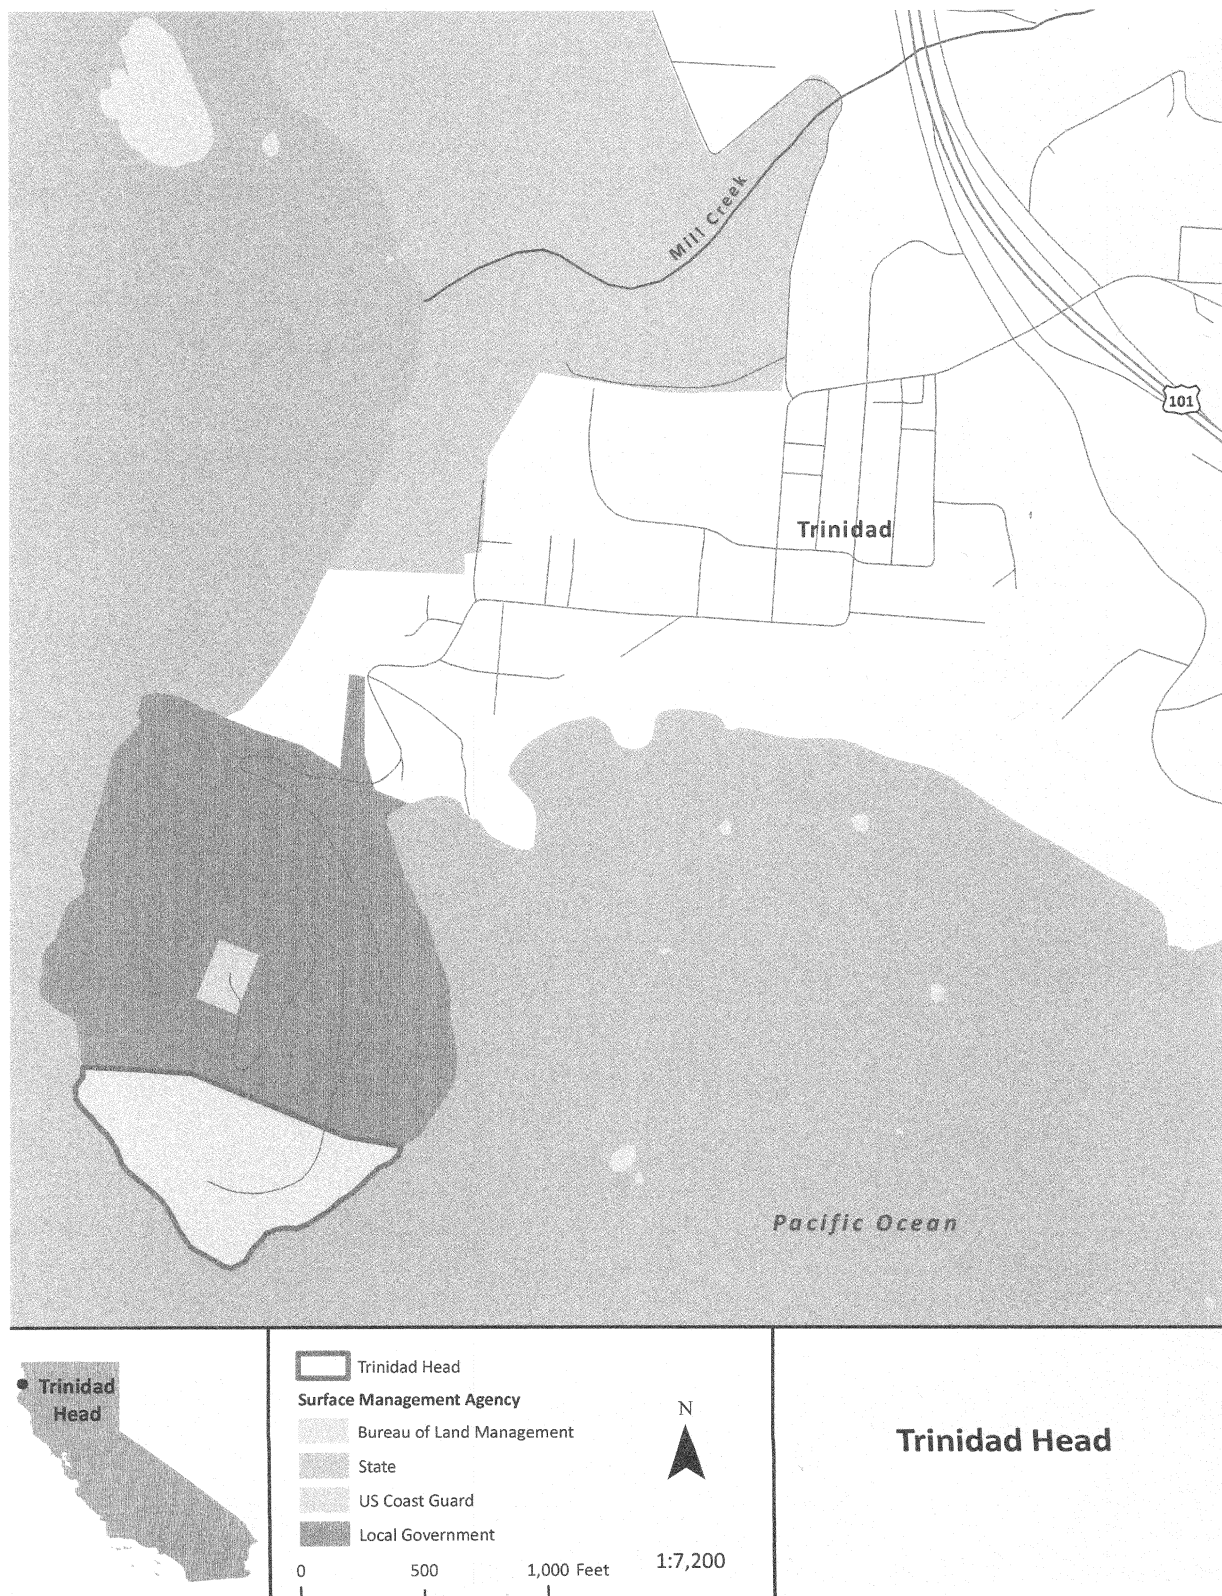

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

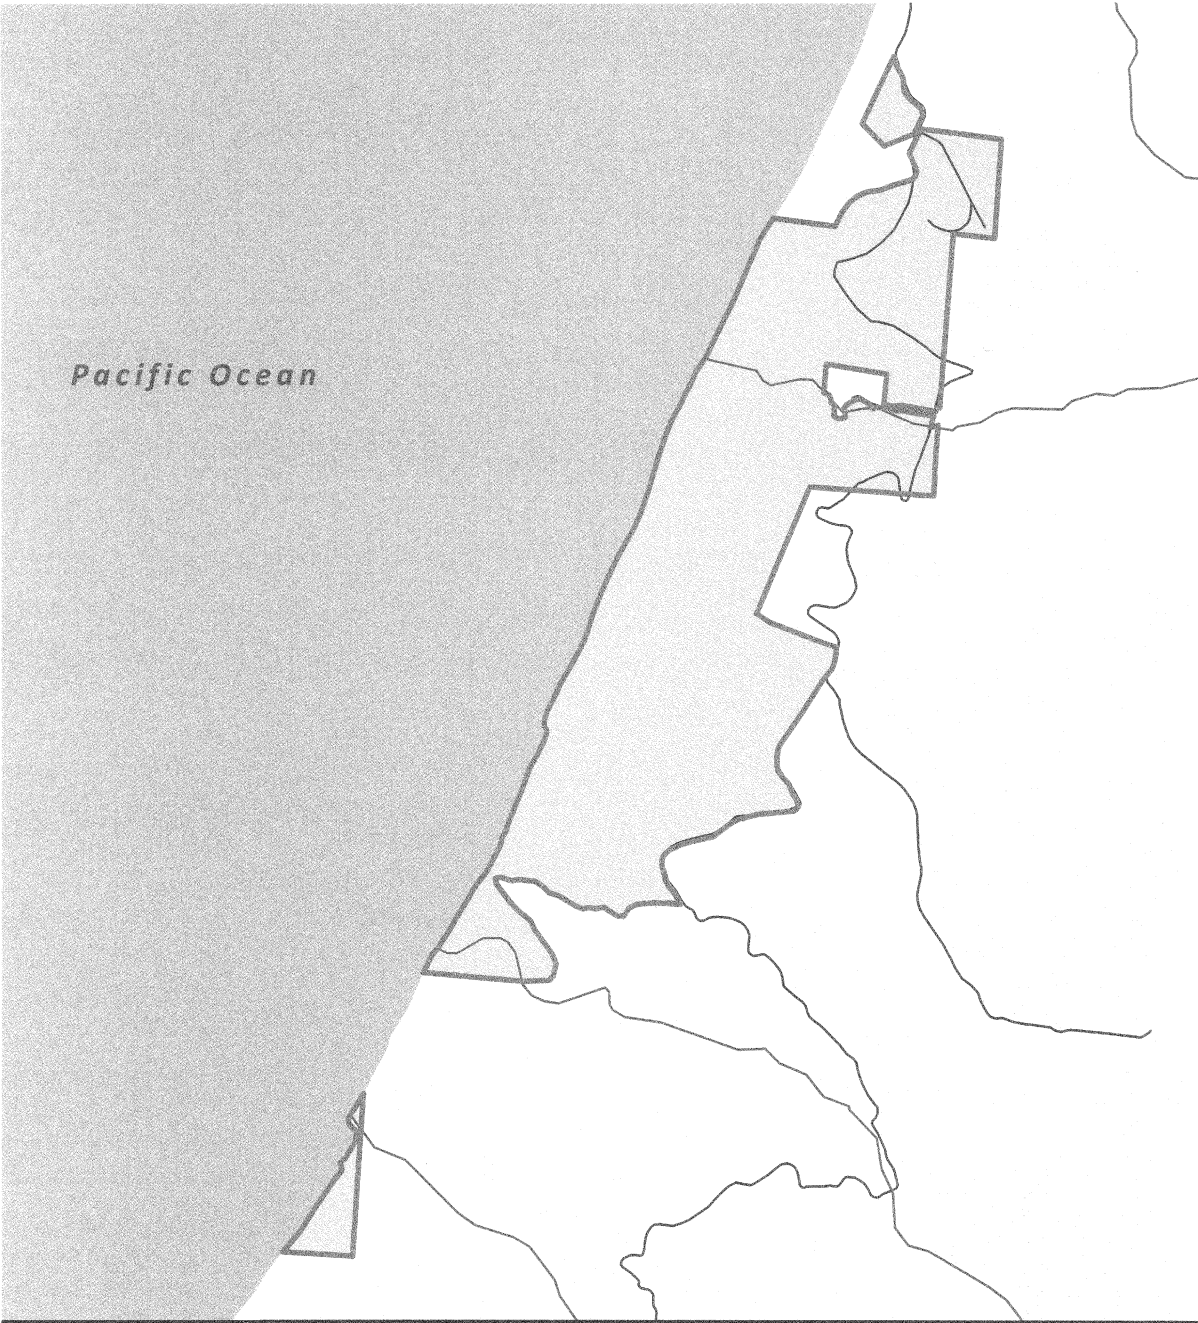

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of the monument and not to locate or settle upon any of the lands thereof.

IN WITNESS WHEREOF, I have hereunto set my hand this twelfth day of January, in the year of our Lord two thousand seventeen, and of the Independence of the United States of America the two hundred and forty-first.

A handwritten signature in black ink, appearing to be "Donald Trump", with a large circular flourish and a horizontal line extending to the right.

Proclamation 9564 of January 12, 2017

Boundary Enlargement of the Cascade-Siskiyou National Monument

By the President of the United States of America

A Proclamation

Through Proclamation 7318 of June 9, 2000, President Bill Clinton established the Cascade-Siskiyou National Monument (monument) to protect the ecological wonders and biological diversity at the interface of the Cascade, Klamath, and Siskiyou ecoregions. The area, home to an incredible variety of species and habitats, represents a rich mosaic of forests, grasslands, shrublands, and wet meadows. The many rare and endemic plant and animal species found here are a testament to Cascade-Siskiyou's unique ecosystems and biotic communities.

As President Clinton noted in Proclamation 7318, the ecological integrity of the ecosystems that harbor this diverse array of species is vital to their continued existence. Since 2000, scientific studies of the area have reinforced that the environmental processes supporting the biodiversity of the monument require habitat connectivity corridors for species migration and dispersal. Additionally, they require a range of habitats that can be resistant and resilient to large-scale disturbance such as fire, insects and disease, invasive species, drought, or floods, events likely to be exacerbated by climate change. Expanding the monument to include Horseshoe Ranch, the Jenny Creek watershed, the Grizzly Peak area, Lost Lake, the Rogue Valley foothills, the Southern Cascades area, and the area surrounding Surveyor Mountain will create a Cascade-Siskiyou landscape that provides vital habitat connectivity, watershed protection, and landscape-scale resilience for the area's critically important natural resources. Such an expansion will bolster protection of the resources within the original boundaries of the monument and will also protect the important biological and historic resources within the expansion area.

The ancient Siskiyou and Klamath Mountains meet the volcanic Cascade Mountains near the border of California and Oregon, creating an intersection of three ecoregions in Jackson and Klamath Counties in Oregon and Siskiyou County in California. Towering rock peaks covered in alpine forests rise above mixed woodlands, open glades, dense chaparral, meadows filled with stunning wildflowers, and swiftly-flowing streams.

Native American occupancy of this remarkably diverse landscape dates back thousands of years, and Euro-American settlers also passed through the expansion area. The Applegate Trail, a branch of the California National Historic Trail, passes through both the existing monument and the expansion area following old routes used by trappers and miners, who themselves made use of trails developed by Native Americans. Today, visitors to the Applegate Trail can walk paths worn by wagon trains of settlers seeking a new life in the west. The trail, a less hazardous alternative to the Oregon Trail, began to see regular wagon traffic in 1846 and helped thousands of settlers traverse the area more safely on their way north to the Willamette Valley or south to California in search of gold—one of the largest mass migrations in American history. Soon thereafter, early ranchers, loggers, and homesteaders began to occupy the area, leaving traces of their presence,

which provide potential for future research into the era of westward expansion in southwestern Oregon. A historic ranch can be seen in the Horseshoe Ranch Wildlife Area, in the northernmost reaches of California.

The Cascade-Siskiyou landscape is formed by the convergence of the Klamath, the Siskiyou, and the Cascade mountain ranges. The Siskiyou Mountains, which contain Oregon's oldest rocks dating to 425 million years, have an east-west orientation that connects the newer Cascade Mountains with the ancient Klamath Mountains. The tectonic action that formed the Klamath and Siskiyou Mountains occurred over 130 million years ago, while the Cascades were formed by more recent volcanism. The Rogue Valley foothills contain Eocene and Miocene formations of black andesite lava along with younger High Cascade olivine basalt. In the Grizzly Peak area, the 25 million-year geologic history includes basaltic lava flows known as the Roxy Formation, along with the formation of a large strato-volcano, Mount Grizzly. Old Baldy, another extinct volcanic cone, rises above the surrounding forest in the far northeast of the expansion area.

Cascade-Siskiyou's biodiversity, which provides habitat for a dazzling array of species, is internationally recognized and has been studied extensively by ecologists, evolutionary biologists, botanists, entomologists, and wildlife biologists. Ranging from high slopes of Shasta red fir to lower elevations with Douglas fir, ponderosa pine, incense cedar, and oak savannas, the topography and elevation gradient of the area has helped create stunningly diverse ecosystems. From ancient and mixed-aged conifer and hardwood forests to chaparral, oak woodlands, wet meadows, shrublands, fens, and open native perennial grasslands, the landscape harbors extraordinarily varied and diverse plant communities. Among these are threatened and endangered plant species and habitat for numerous other rare and endemic species.

Grizzly Peak and the surrounding Rogue Valley foothills in the northwest part of the expansion area are home to rare populations of plant species such as rock buckwheat, Baker's globemallow, and tall bugbane. More than 275 species of flowering plants, including Siberian spring beauty, bluehead gilia, Detling's silverpuffs, bushy blazingstar, southern Oregon buttercup, Oregon geranium, mountain lady slipper, Egg Lake monkeyflower, green-flowered ginger, and *Coronis fritillaria* can be found here. Ferns such as the fragile fern, lace fern, and western sword fern contribute to the lush green landscape.

Ancient sugar pine and ponderosa pine thrive in the Lost Lake Research Natural Area in the north, along with white fir and Douglas fir, with patches of Oregon white oak and California black oak. Occasional giant chinquapin, Pacific yew, and bigleaf maple contribute to the diversity of tree species here. Shrubs such as western serviceberry, oceanspray, Cascade barberry, and birchleaf mountain mahogany grow throughout the area, along with herbaceous species including pale bellflower, broadleaf starflower, pipsissewa, and Alaska oniongrass. Creamy stonecrop, a flowering succulent, thrives on rocky hillsides. Patches of abundant ferns include coffee cliffbrake and arrowleaf sword fern. Moon Prairie contains a late successional stand of Douglas fir and white fir with Pacific yew, ponderosa pine, and sugar pine.

Old Baldy's high-elevation forests in the northeast include Shasta red fir, mountain hemlock, Pacific silver fir, and western white pine along with Southern Oregon Cascades chaparral. Nearby, Tunnel Creek is a high-altitude lodgepole pine swamp with bog blueberry and numerous sensitive sedge species such as capitate sedge, lesser bladderwort, slender sedge, *tomentypnum* moss, and Newberry's gentian.

The eastern portion of the expansion, in the area surrounding Surveyor Mountain, is home to high desert species such as bitterbrush and sagebrush, along with late successional dry coniferous forests containing lodgepole pine, dry currant, and western white pine.

The Horseshoe Ranch Wildlife Area in Siskiyou County, California, offers particularly significant ecological connectivity and integrity. The area contains a broad meadow ecosystem punctuated by Oregon white oak and western juniper woodlands alongside high desert species such as gray rabbitbrush and antelope bitterbrush. The area is also home to the scarlet fritillary, Greene's mariposa lily, Bellinger's meadowfoam, and California's only population of the endangered Gentner's fritillary.

The incredible biodiversity of plant communities in the expansion is mirrored by equally stunning animal diversity, supported by the wide variety of intact habitats and undisturbed corridors allowing animal migration and movement. Perhaps most notably, the Cascade-Siskiyou landscape, including the Upper Jenny Creek Watershed and the Southern Cascades, provides vitally important habitat connectivity for the threatened northern spotted owl. Other raptors, including the bald eagle, golden eagle, white-tailed kite, peregrine falcon, merlin, great gray owl, sharp-shinned hawk, Cooper's hawk, osprey, American kestrel, northern goshawk, flammulated owl, and prairie falcon, soar above the meadows, mountains, and forests as they seek their prey.

Ornithologists and birdwatchers alike come to the Cascade-Siskiyou landscape for the variety of birds found here. Tricolored blackbird, grasshopper sparrow, bufflehead, black swift, Lewis's woodpecker, purple martin, blue grouse, common nighthawk, dusky flycatcher, lazuli bunting, mountain quail, olive-sided flycatcher, Pacific-slope flycatcher, pileated woodpecker, ruffed grouse, rufous hummingbird, varied thrush, Vaux's swift, western meadowlark, western tanager, white-headed woodpecker, and Wilson's warbler are among the many species of terrestrial birds that make their homes in the expansion area. The Oregon vesper sparrow, among the most imperiled bird species in the region, has been documented in the meadows of the upper Jenny Creek Watershed.

Shore and marsh birds, including the Tule goose, yellow rail, snowy egret, harlequin duck, Franklin's gull, red-necked grebe, sandhill crane, pintail, common goldeneye, bufflehead, greater yellowlegs, and least sandpiper, also inhabit the expansion area's lakes, ponds, and streams.

Diverse species of mammals, including the black-tailed deer, elk, pygmy rabbit, American pika, and northern flying squirrel, depend upon the extraordinary ecosystems found in the area. Beavers and river otters inhabit the landscape's streams and rivers, while Horseshoe Ranch Wildlife Area has been identified as a critical big game winter range. Bat species including the pallid bat, Townsend's big-eared bat, and fringed myotis hunt insects beginning at dusk. The expansion area encompasses known habitat for endangered gray wolves, including a portion of the area of known activity for the Keno wolves. Other carnivores such as the Pacific fisher, cougar, American badger, black bear, coyote, and American marten can be seen and studied in the expansion area.

The landscape also contains many hydrologic features that capture the interest of visitors. Rivers and streams cascade through the mountains, and waterfalls such as Jenny Creek Falls provide aquatic habitat along with scenic beauty. The upper headwaters of the Jenny Creek watershed are vital to the ecological integrity of the watershed as a whole, creating clear cold water that provides essential habitat for fish living at the margin of their environmental tolerances. Fens and wetlands, along with riparian wetlands and wet montane meadows, can be found in the eastern portion of the expansion area. Lost Lake, in the northernmost portion of the expansion area, contains a large lake that serves as Western pond turtle habitat, along with another upstream waterfall.

The expansion area includes habitat for populations of the endemic Jenny Creek sucker and Jenny Creek redband trout, as well as habitat for the Klamath largescale sucker, the endangered shortnose sucker, and the endangered Lost River sucker. The watershed also contains potential habitat for

the threatened coho salmon. Numerous species of aquatic plants grow in the area's streams, lakes, and ponds.

Amphibians such as black salamander, Pacific giant salamander, foothill yellow-legged frog, Cascade frog, the threatened Oregon spotted frog, and the endemic Siskiyou Mountains salamander thrive here thanks to the connectivity between terrestrial and aquatic habitats. Reptiles found in the expansion area include the western pond turtle, northern alligator lizard, desert striped whipsnake, and northern Pacific rattlesnake.

The Cascade-Siskiyou landscape's remarkable biodiversity includes the astounding diversity of invertebrates found in the expansion, including freshwater mollusks like the Oregon shoulderband, travelling sideband, modoc rim sideband, Klamath tailedrop, chase sideband, Fall Creek pebblesnail, Keene Creek pebblesnail, and Siskiyou hesperian. The area has been identified by evolutionary biologists as a center of endemism and diversity for springsnails, and researchers have discovered four new species of mygalomorph spiders in the expansion. Pollinators such as Franklin's bumblebee, western bumblebee, and butterflies including Johnson's hairstreak, gray blue butterfly, mardon skipper, and Oregon branded skipper are critical to the ecosystems' success. Other insects found here include the Siskiyou short-horned grasshopper and numerous species of caddisfly.

The Cascade-Siskiyou landscape has long been a focus for scientific studies of ecology, evolutionary biology, wildlife biology, entomology, and botany. The expansion area provides an invaluable resource to scientists and conservationists wishing to research and sustain the functioning of the landscape's ecosystems into the future.

The expansion area includes numerous objects of scientific or historic interest. This enlargement of the Cascade-Siskiyou National Monument will maintain its diverse array of natural and scientific resources and preserve its cultural and historic legacy, ensuring that the scientific and historic values of this area remain for the benefit of all Americans.

WHEREAS, section 320301 of title 54, United States Code (known as the "Antiquities Act"), authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which in all cases shall be confined to the smallest area compatible with the proper care and management of the objects to be protected;

WHEREAS, it is in the public interest to preserve the objects of scientific and historic interest on these public lands as an enlargement of the boundary of the Cascade-Siskiyou National Monument;

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the Federal Government to be part of the Cascade Siskiyou National Monument and, for the purpose of protecting those objects, reserve as part thereof all lands and interests in lands owned or controlled by the Federal Government within the boundaries described on the accompanying map, which is attached hereto and forms a part of this proclamation. These reserved Federal lands and interests in lands encompass approximately 48,000 acres. The boundaries described on the accompanying map are confined to the smallest area compatible with the proper care and management of the objects to be protected.

Nothing in this proclamation shall change the management of the areas protected under Proclamation 7318. Terms used in this proclamation shall have the same meaning as those defined in Proclamation 7318.

All Federal lands and interests in lands within the boundaries described on the accompanying map are hereby appropriated and withdrawn from

all forms of entry, location, selection, sale, or other disposition under the public land laws, from location, entry, and patent under the mining laws, and from disposition under all laws relating to mineral and geothermal leasing, other than by exchange that furthers the protective purposes of the monument.

The enlargement of the boundary is subject to valid existing rights. If the Federal Government subsequently acquires any lands or interests in lands not owned or controlled by the Federal Government within the boundaries described on the accompanying map, such lands and interests in lands shall be reserved as a part of the monument, and objects identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

The Secretary of the Interior (Secretary) shall manage the area being added to the monument through the Bureau of Land Management as a unit of the National Landscape Conservation System, under the same laws and regulations that apply to the rest of the monument, except that the Secretary may issue a travel management plan that authorizes snowmobile and non-motorized mechanized use off of roads in the area being added by this proclamation, so long as such use is consistent with the care and management of the objects identified above.

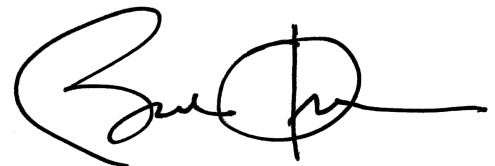

Nothing in this proclamation shall preclude low-level overflights of military aircraft, the designation of new units of special use airspace, or the use or establishment of military flight training routes over the lands reserved by this proclamation consistent with the care and management of the objects identified above.

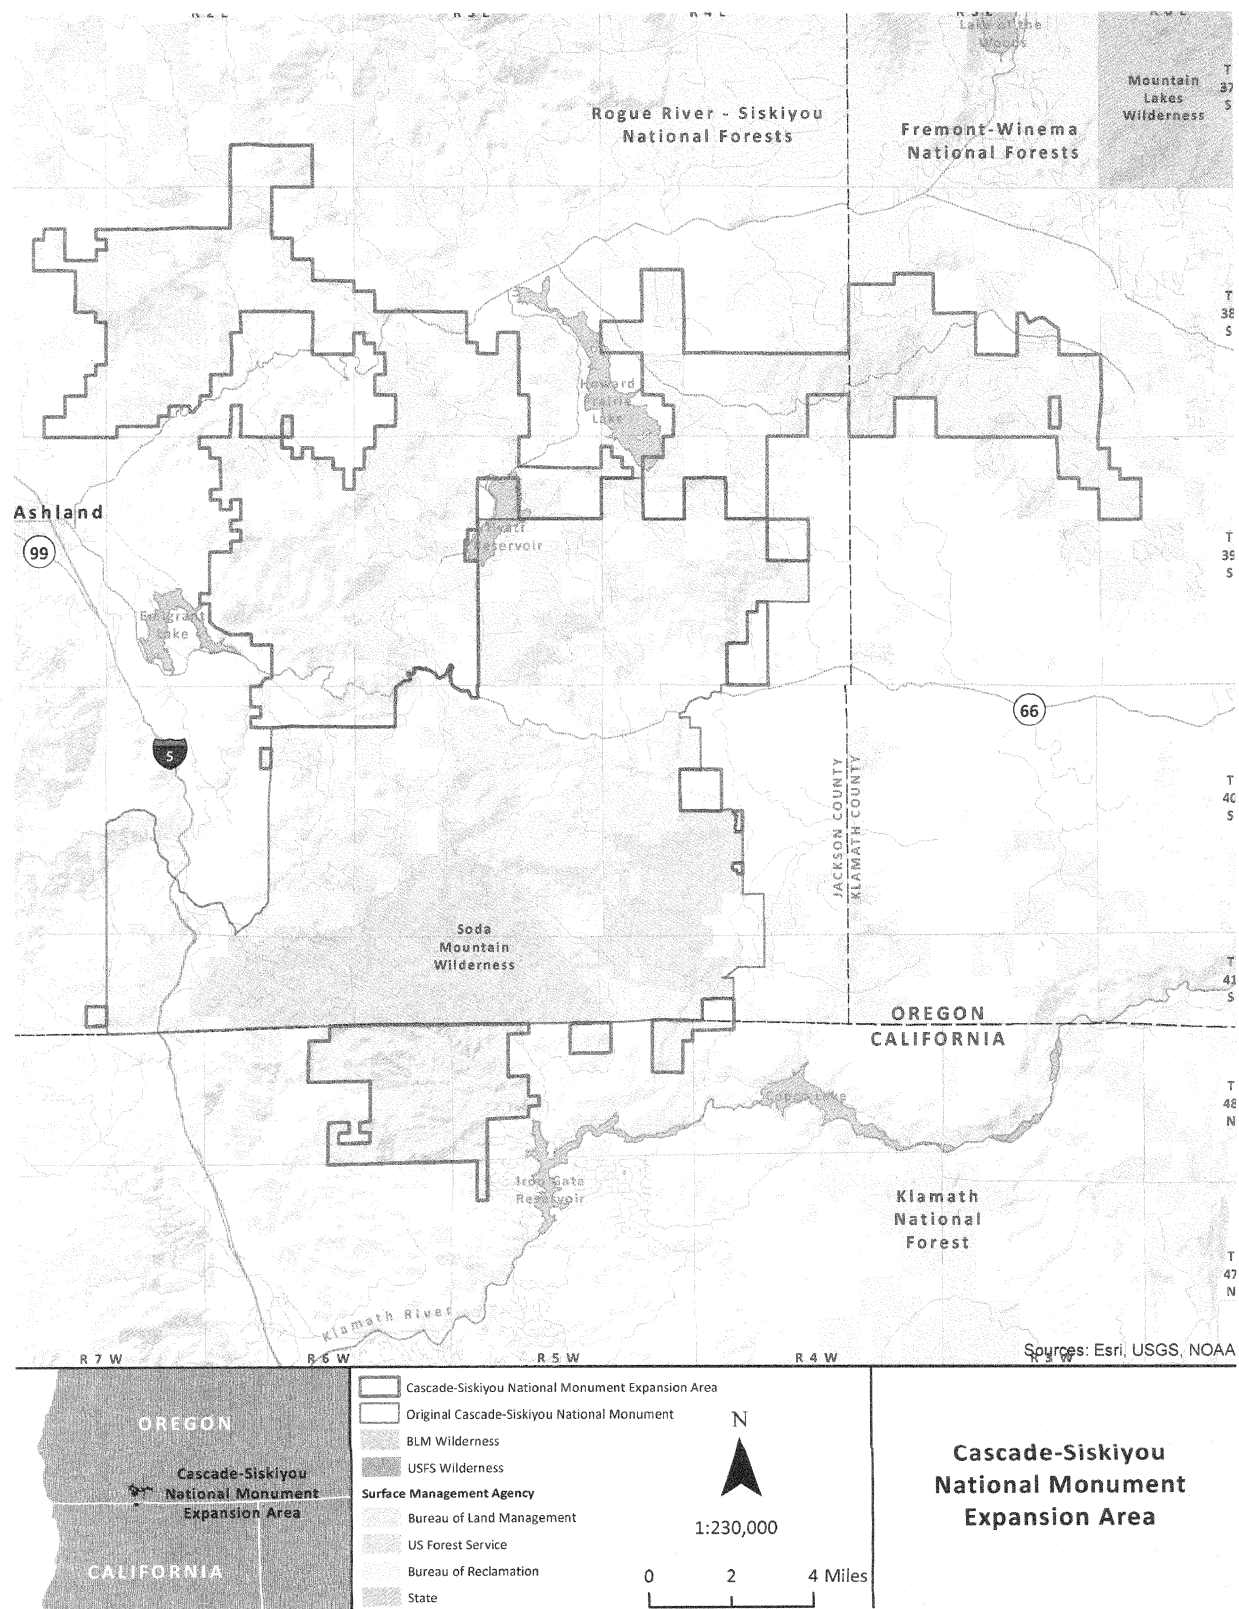

Nothing in this proclamation shall be deemed to enlarge or diminish the jurisdiction of the State of Oregon or the State of California with respect to fish and wildlife management.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

IN WITNESS WHEREOF, I have hereunto set my hand this twelfth day of January, in the year of our Lord two thousand seventeen, and of the Independence of the United States of America the two hundred and forty-first.

Presidential Documents

Proclamation 9565 of January 12, 2017

Establishment of the Birmingham Civil Rights National Monument

By the President of the United States of America

A Proclamation

The A.G. Gaston Motel (Gaston Motel), located in Birmingham, Alabama, within walking distance of the Sixteenth Street Baptist Church, Kelly Ingram Park, and other landmarks of the American civil rights movement (movement), served as the headquarters for a civil rights campaign in the spring of 1963. The direct action campaign—known as “Project C” for confrontation—challenged unfair laws designed to limit the freedoms of African Americans and ensure racial inequality. Throughout the campaign, Dr. Martin Luther King, Jr., and Reverend Ralph David Abernathy of the Southern Christian Leadership Conference (SCLC), Reverend Fred L. Shuttlesworth of the Alabama Christian Movement for Human Rights (ACMHR), and other movement leaders rented rooms at the Gaston Motel and held regular strategy sessions there. They also staged marches and held press conferences on the premises. Project C succeeded in focusing the world’s attention on racial injustice in America and creating momentum for Federal civil rights legislation that would be enacted in 1964.

The Gaston Motel, the highest quality accommodation in Birmingham in 1963 that accepted African Americans, was itself the product of segregation. Arthur George (A.G.) Gaston, a successful African American businessman whose enterprises addressed the needs of his segregated community, opened the motel in 1954 to provide “something fine that . . . will be appreciated by our people.” In the era of segregation, African Americans faced inconveniences, indignities, and personal risk in their travels. The conveniences and comforts of the Gaston Motel were a rarity for them. The motel hosted many travelers over the years, including business and professional people; celebrities performing in the city; participants in religious, social, and political conferences; and in April–May 1963, the movement leaders, the press, and others who would bring Project C to the world stage. During Project C, King and Abernathy occupied the motel’s main suite, Room 30, located on the second floor above the office and lobby, and they and their colleagues held most of their strategy sessions in the suite’s sitting room.

The events at the Gaston Motel drew attention to State and local laws and customs that—a century after the Civil War—promoted racial inequality. In January 1963, incoming Alabama Governor George Wallace declared, “Segregation now! Segregation tomorrow! Segregation forever!” Birmingham, Alabama’s largest city, was a bastion of segregation, enforced by law, custom, and violence. The city required the separation of races at parks, pools, playgrounds, hotels, restaurants, theaters, on buses, in taxicabs, and elsewhere. Zoning ordinances determined where African Americans could purchase property, and a line of demarcation created a virtual wall around the Fourth Avenue business district that served the African American community. Racial discrimination pervaded housing and employment. Violence was frequently used to intimidate those who dared to challenge segregation. From 1945 to 1963, Birmingham witnessed 60 bombings of African American homes, businesses, and churches, earning the city the nickname “Bombingham.”

By early 1963, civil rights activism was also well established in Birmingham. Civil rights leaders had been spurred into action in 1956 when the State of Alabama effectively outlawed the National Association for the Advancement of Colored People (NAACP). A sheriff served Shuttlesworth, Membership Chairman of the NAACP's Alabama chapter, with an injunction at the organization's regional headquarters in Birmingham's Masonic Temple, where many African American professionals and organizations had their offices. In swift response, Shuttlesworth formed the ACMHR in June 1956, and established its headquarters at his church, Bethel Baptist. Shuttlesworth and the ACMHR spearheaded a church-led civil rights movement in Birmingham: they held mass meetings every Monday night, pursued litigation, and initiated direct action campaigns. The ACMHR and Shuttlesworth established ties with other civil rights organizations, and developed reputations as serious forces in the civil rights movement. As the primary Birmingham contact during the 1961 Freedom Rides, Shuttlesworth and his deacons rescued multiple Freedom Riders, sheltering them at Bethel Baptist Church and its parsonage. Shuttlesworth also worked to cultivate other local protest efforts. In 1962, he supported students from Miles College as they launched a boycott of downtown stores that treated African Americans as second class citizens. A year later some of the same students would participate in Project C.

Shuttlesworth encouraged the SCLC to come to Birmingham. By early 1963, King and his colleagues decided that the intransigence of Birmingham's segregationist power structure, and the strength of its indigenous civil rights movement, created the necessary tension for a campaign that could capture the Nation's—and the Kennedy Administration's—attention, and pressure city leaders to desegregate. In the words of King, "As Birmingham goes, so goes the South."

The plan of the Birmingham campaign was to attack Birmingham's segregated business practices during the busy and lucrative Easter shopping season through nonviolent direct action, including boycotts, marches, and sit-ins. On April 3, 1963, Shuttlesworth distributed a pamphlet entitled "Birmingham Manifesto" to announce the campaign to the press and encourage others to join the cause. Sit-ins at downtown stores began on April 3, as did nightly mass meetings. The first march of the campaign was on April 6, 1963. Participants gathered in the courtyard of the Gaston Motel and started to march toward City Hall, but the police department under the command of Commissioner of Public Safety T. Eugene "Bull" Connor stopped them within three blocks, arrested them, and sent them to jail. The next day, Birmingham police, assisted by their canine corps, again quickly stopped the march from St. Paul United Methodist Church toward City Hall, containing the protesters in Kelly Ingram Park.

Over the next few days, as the possibility of violence increased, some local African American leaders, including A.G. Gaston, questioned Project C. In response, King created a 25-person advisory committee to allow discussion of the leaders' different viewpoints. The advisory committee met daily at the Gaston Motel and reviewed each day's plan.

On April 10, the city obtained an injunction against the marches and other demonstrations from a State court, and served it on King, Abernathy, and Shuttlesworth in the Gaston Motel restaurant at 1:00 a.m. on April 11. During the Good Friday march on April 12, King, Abernathy, and others were arrested. King was placed in solitary confinement, drawing the attention of the Kennedy Administration, which began to monitor developments in Birmingham. While jailed, King wrote his famous "Letter from a Birmingham Jail." His letter was a response to a statement published in the local newspaper by eight moderate white clergymen who supported integration but opposed the direct action campaign as "unwise and untimely." They believed that negotiations and legal processes were the appropriate means to end segregation, and without directly naming him, portrayed King as an outsider

trying to stir up civil unrest. In response, King wrote, "I am in Birmingham because injustice is here."

While King was in jail, the campaign lost momentum. Upon King's release, James Bevel, a young SCLC staffer, proposed what would become known as the "Children's Crusade," a highly controversial strategy aimed at capturing the Nation's attention. On May 2—dubbed D-Day—hundreds of African American teenagers prepared to march from the Sixteenth Street Baptist Church to City Hall. With a crowd of bystanders present, police began arresting young protesters in Kelly Ingram Park. Overwhelmed by the number of protesters, estimated at 1,000, Commissioner Connor called for school buses to transport those arrested to jail. On May 3—Double-D Day—Connor readied his forces for another mass march by stationing police, canine units, and firemen at Kelly Ingram Park. As the young protesters entered the park, authorities ordered them to evacuate the area; when they did not leave, firemen trained their water cannons on them. The high-pressure jets of water knocked them to the ground and tore at their clothing. Connor next deployed the canine corps to disperse the crowd. Police directed six German shepherds towards the crowd and commanded them to attack. Reporters documented the violence, and the next day the country was confronted with dramatic scenes of brutal police aggression against civil rights protesters. These vivid examples of segregation and racial injustice shocked the conscience of the Nation and the world.

The marches and demonstrations continued. Fearing civil unrest and irreparable damage to the city's reputation, on May 8 the Birmingham business community and local leaders agreed to release the peaceful protesters, integrate lunch counters, and begin to hire African Americans. On May 10, 1963, the Gaston Motel served as the site to announce this compromise between local white leaders and civil rights advocates. The motel was bombed around midnight. The bomb blasted a door-sized hole into the reception area below King's second story suite and damaged the water main and electrical lines. King was not in Birmingham at the time. His brother, A.D. King, whose own home in Birmingham had been bombed earlier in the day, worked to calm outraged African Americans and avoid an escalation of violence.

Despite the negotiated peace, African Americans in Birmingham continued to face hostile resistance to integration. That fall, Governor Wallace, in violation of a Federal court order, directed State troopers to prevent desegregation of Alabama public schools. When a Federal court issued injunctions against the troopers, the Governor called out the National Guard. To counter that action, President John F. Kennedy federalized and withdrew the National Guard, thereby allowing desegregation. In response, on September 15, 1963, white supremacists planted a bomb at the Sixteenth Street Baptist Church. Addie Mae Collins, Carole Robertson, and Cynthia Wesley, all of whom were 14, and Denise McNair, 11, were killed. The explosion injured 22 others and left significant damage to the church. King traveled to Birmingham to deliver the eulogy for the little girls. This act of domestic terrorism again shocked the conscience of the Nation and the world.

Public outrage over the events in Birmingham produced political pressure that helped to ensure passage of the Civil Rights Act of 1964, which President Lyndon Johnson signed into law on July 2, 1964. Later that year, the U.S. Supreme Court affirmed the constitutionality of the public accommodation provisions (Title II) of the Act. Several Southern politicians announced that laws must be respected, and across the South outward signs of segregation began to disappear.

Partially as a result of the Federal legislation outlawing discrimination in public accommodations, business at the Gaston Motel suffered. African Americans had more choices in motels and dining. When King returned to Birmingham for an SCLC conference in 1964, he and three dozen colleagues checked into the Parliament House, then considered Birmingham's finest hotel. A.G. Gaston modernized and expanded his motel in 1968, adding

a large supper club and other amenities, but business continued to fall through the 1970s. In 1982, Gaston announced that the motel would be converted into housing for the elderly and handicapped. The use of the property for this purpose ceased in 1996, and the former Gaston Motel has sat vacant ever since.

Although some people continued to resist integration following the events of the early 1960s, the passage of the Civil Rights Act of 1964, and its enforcement by the Department of Justice, had the effect of eliminating official segregation of public accommodations. Today, the Gaston Motel, the Birmingham Civil Rights Historic District in which the motel is located, the Bethel Baptist Church, and other associated resources all stand as a testament to the heroism of those who worked so hard to advance the cause of freedom.

Thus, the sites of these events contain objects of historic interest from a critical period in American history.

WHEREAS, section 320301 of title 54, United States Code (known as the “Antiquities Act”), authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which shall be confined to the smallest area compatible with the proper care and management of the objects to be protected;

WHEREAS, the Birmingham Civil Rights Historic District (Historic District) was listed in the National Register of Historic Places (NRHP) in 2006, as a nationally significant property associated with the climax of the civil rights struggle during the 1956–63 period; and the Historic District contains three key areas and the streets that connect them, covering 36 acres throughout the city; and the Gaston Motel, located in the African American commercial and cultural area known as Northside, is deemed a “major significant resource” in the Historic District;

WHEREAS, many other Birmingham places have been listed and recognized for their historic roles in the Birmingham civil rights story, including by designation as National Historic Landmarks;

WHEREAS, the City of Birmingham has donated to the National Trust for Historic Preservation fee and easement interests in the Gaston Motel, totaling approximately 0.23 acres in fee and 0.65 acres in a historic preservation easement;

WHEREAS, the National Trust for Historic Preservation has relinquished and conveyed all of these lands and interests in lands associated with the Gaston Motel to the Federal Government for the purpose of establishing a unit of the National Park System;

WHEREAS, the designation of a national monument to be administered by the National Park Service would recognize the historic significance of the Gaston Motel in the Birmingham civil rights story and provide a national platform for telling that story;

WHEREAS, the City of Birmingham and the National Park Service intend to cooperate in the preservation, operation, and maintenance of the Gaston Motel, and interpretation and education related to the civil rights struggle in Birmingham;

WHEREAS, it is in the public interest to preserve and protect the Gaston Motel in Birmingham, Alabama and the historic objects associated with it within a portion of the Historic District;

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the

Federal Government to be the Birmingham Civil Rights National Monument (monument) and, for the purpose of protecting those objects, reserve as a part thereof all lands and interests in lands owned or controlled by the Federal Government within the boundaries described on the accompanying map, which is attached to and forms a part of this proclamation. The reserved Federal lands and interests in lands encompass approximately 0.88 acres. The boundaries described on the accompanying map are confined to the smallest area compatible with the proper care and management of the objects to be protected.

All Federal lands and interests in lands within the boundaries described on the accompanying map are hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or other disposition under the public land laws, from location, entry, and patent under the mining laws, and from disposition under all laws relating to mineral and geothermal leasing.

The establishment of the monument is subject to valid existing rights. If the Federal Government acquires any lands or interests in lands not owned or controlled by the Federal Government within the boundaries described on the accompanying map, such lands and interests in lands shall be reserved as a part of the monument, and objects identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

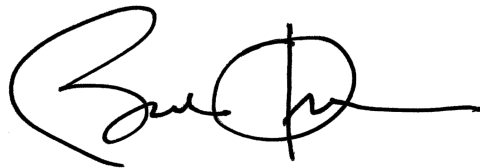

The Secretary of the Interior (Secretary) shall manage the monument through the National Park Service, pursuant to applicable legal authorities, consistent with the purposes and provisions of this proclamation. The Secretary shall prepare a management plan, with full public involvement and in coordination with the City of Birmingham, within 3 years of the date of this proclamation. The management plan shall ensure that the monument fulfills the following purposes for the benefit of present and future generations: (1) to preserve and protect the objects of historic interest associated with the monument, and (2) to interpret the objects, resources, and values related to the civil rights movement. The management plan shall, among other things, set forth the desired relationship of the monument to other related resources, programs, and organizations, both within and outside the National Park System.

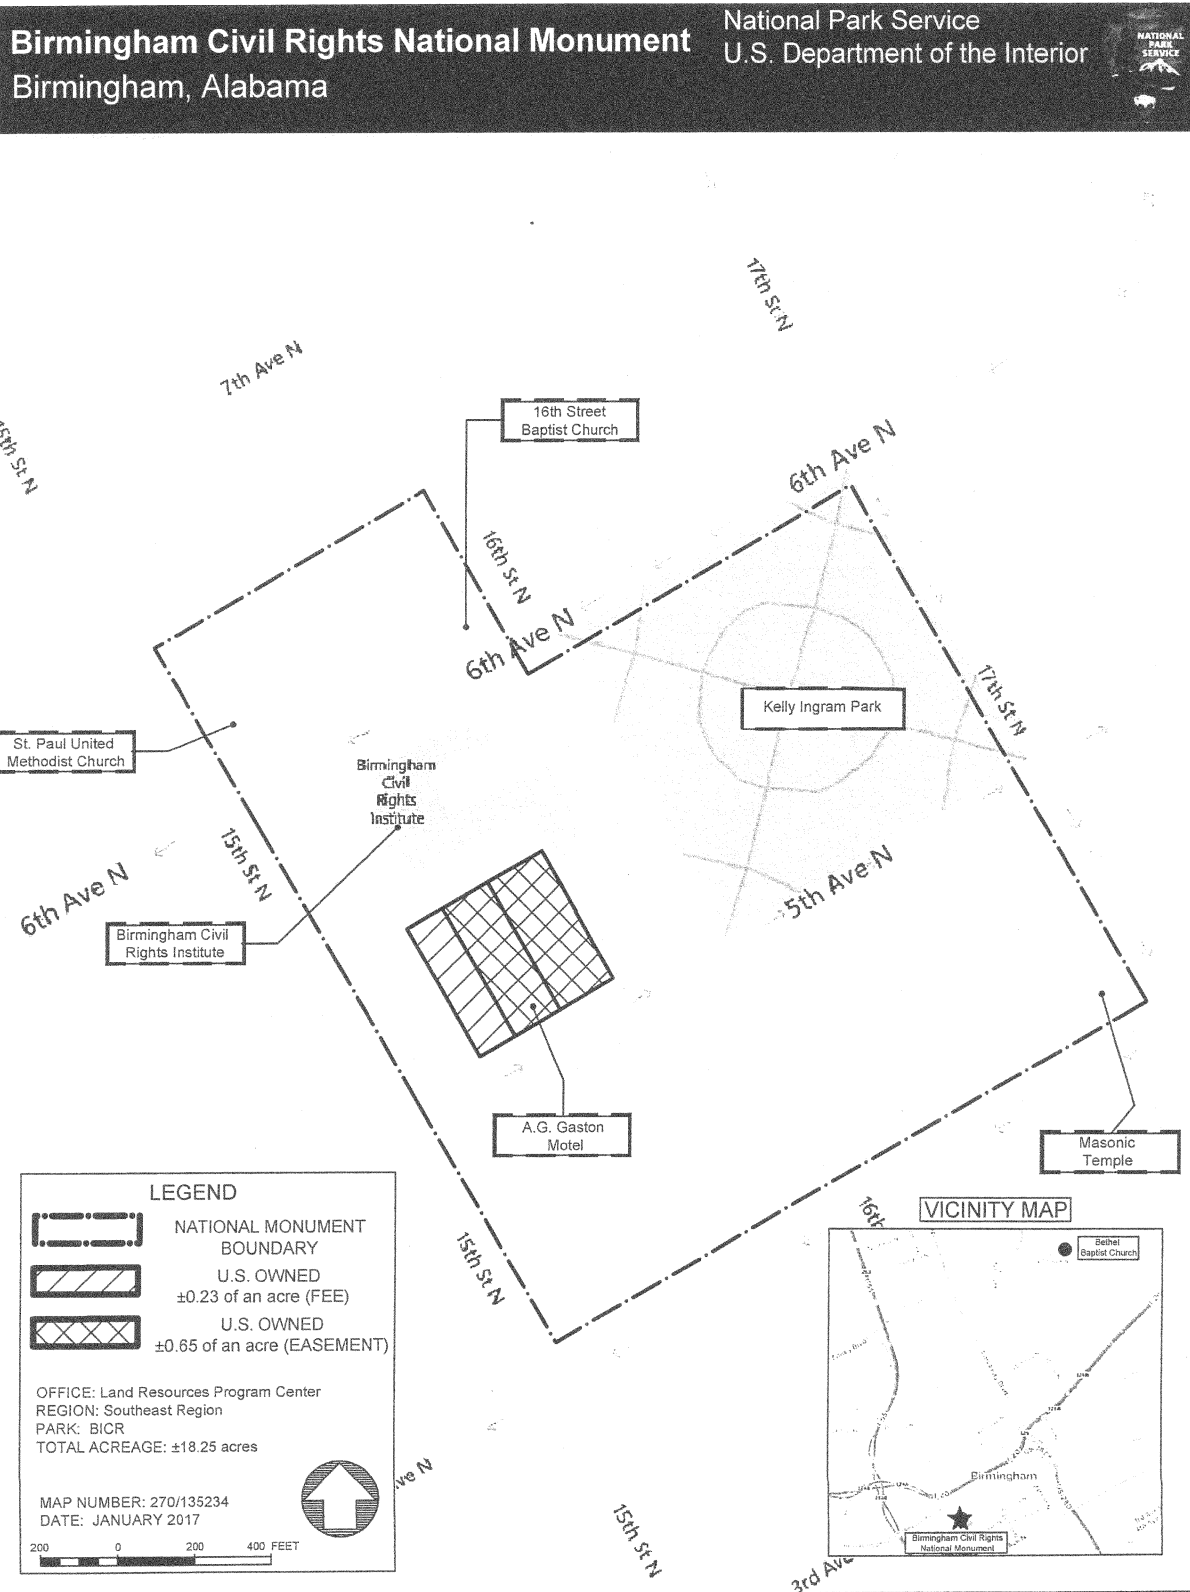

The National Park Service is directed to use applicable authorities to seek to enter into agreements with others, including the City of Birmingham, the Birmingham Civil Rights Institute, the Sixteenth Street Baptist Church, and the Bethel Baptist Church, to address common interests and promote management efficiencies, including provision of visitor services, interpretation and education, establishment and care of museum collections, and preservation of historic objects.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

IN WITNESS WHEREOF, I have hereunto set my hand this twelfth day of January, in the year of our Lord two thousand seventeen, and of the Independence of the United States of America the two hundred and forty-first.

A handwritten signature in black ink, appearing to be "Donald Trump", with a large circular flourish and a horizontal line extending to the right.

Proclamation 9566 of January 12, 2017

Establishment of the Freedom Riders National Monument

By the President of the United States of America

A Proclamation

An interracial group of “Freedom Riders” set out in May 1961 on a journey from Washington, DC, to New Orleans through the Deep South. In organizing the 1961 Freedom Rides, the Congress of Racial Equality (CORE) was building upon earlier efforts of other civil rights organizations, including the 1947 “Journey of Reconciliation,” an integrated bus ride through the segregated Upper South. The purpose of the 1961 Freedom Rides was to test if bus station facilities in the Deep South were complying with U.S. Supreme Court decisions. *Brown v. Board of Education of Topeka* (1954) had reversed the infamous “separate but equal” doctrine in public education, and *Morgan v. Virginia* (1946) and *Boynton v. Virginia* (1960) had struck down Virginia laws compelling segregation in interstate travel.

These rulings were the result of successful litigation brought by the National Association for the Advancement of Colored People, which laid the groundwork for direct action campaigns by civil rights organizations like CORE, the Southern Christian Leadership Conference, and the Student Nonviolent Coordinating Committee (SNCC). These organizations had gathered strength, and by the 1950s had launched mass movements that demonstrated the power of nonviolent protest. At the same time, reaction to the decision in *Brown v. Board of Education* had heightened racial tensions in the country, especially in the Deep South. White Citizens’ Councils, made up of politicians, businessmen, and civic leaders committed to resisting integration, formed throughout the South. In 1956, over 100 members of Congress signed the “Southern Manifesto,” which criticized the *Brown* decision and called for resistance to its implementation. This campaign of massive resistance launched by white segregationists reinforced their determination to assure continued separation of the races in public spaces.

Against this background, on May 4, 1961, in Washington, DC, eleven Freedom Riders split into two groups and boarded two buses, a Greyhound bus and a Trailways bus, bound for New Orleans. The Greyhound bus carrying the first of these groups left Atlanta, Georgia on Sunday, May 14, and pulled into a Greyhound bus station in Anniston, Alabama later that day. There, a segregationist mob, including members of the Ku Klux Klan, violently attacked the Freedom Riders. The attackers threw rocks at the bus, broke windows, and slashed tires. Belatedly, police officers arrived and cleared a path, allowing the bus to depart with a long line of vehicles in pursuit. Two cars pulled ahead of the bus and forced the bus to slow to a crawl. Six miles outside of town, the bus’s slashed tires gave out and the driver stopped on the shoulder of Highway 202. There, with the Freedom Riders onboard, one member of the mob threw a flaming bundle of rags through one of the windows that caused an explosion seconds later. The Freedom Riders struggled to escape as members of the mob attempted to trap them inside the burning bus. When they finally broke free, they received little aid for their injuries. Later that day, deacons dispatched by Reverend Fred L. Shuttlesworth of Birmingham’s Bethel Baptist Church rescued the Freedom Riders from the hostile mob at Anniston Hospital and drove them to Birmingham for shelter at the church. A freelance photojournalist captured the horrific scene of the attack in photographs,

which appeared on the front pages of newspapers across America the next day. The brutal portrayal of segregation in the South shocked many Americans and forced the issue of racial segregation in interstate travel to the forefront of the American conscience.

When the Trailways bus, which had departed Atlanta an hour after the Greyhound bus, arrived in Anniston, the Trailways station was mostly quiet. A group of Klansmen boarded the bus and forcibly segregated the Freedom Riders. With all aboard, the bus left on its two-hour trip to Birmingham during which the Klansmen continued to intimidate and harass the Freedom Riders. When the Trailways bus arrived in Birmingham, a mob of white men and women attacked the Freedom Riders, reporters, and bystanders with fists, iron pipes, baseball bats, and other weapons, while the police department under the charge of Commissioner of Public Safety T. Eugene "Bull" Connor was nowhere to be seen. After fifteen minutes of violence, the mob retreated and the police appeared.

Leaders of the Nashville Student Movement, including members of SNCC, firmly believed that they could not let violence prevail over nonviolence. They organized an interracial group of volunteers to travel to Birmingham and resume the Freedom Rides. Under police protection negotiated with help from the Kennedy Administration, on May 20, these SNCC Freedom Riders departed Birmingham en route to Montgomery, Alabama, where an angry white mob viciously attacked them. The next night, Dr. Martin Luther King, Jr.—who had not been involved in the planning of the Freedom Rides—joined Reverend Ralph David Abernathy and Reverend Shuttlesworth at a mass meeting in Abernathy's First Baptist Church in Montgomery. A white mob gathered outside the church, attacked African American onlookers, and held hostage the civil rights leaders and approximately 1,500 attendees inside the church. King remained in telephone communication with Attorney General Robert F. Kennedy while U.S. marshals attempted to repel the siege. Finally, Governor John Patterson was forced to declare martial law and send in the National Guard.

Media coverage of the Freedom Rides inspired many people to take action and join the effort to end racial inequality. Over the summer of 1961, the number of Freedom Riders grew to over 400, many of whom were arrested and jailed for their activism. The Freedom Rides of 1961 focused national attention on Southern segregationists' disregard for U.S. Supreme Court rulings and the violence that they used to enforce unconstitutional State and local segregation laws and practices. The Freedom Rides forced the Federal Government to take steps to ban segregation in interstate bus travel. On May 29, 1961, Attorney General Kennedy petitioned the Interstate Commerce Commission (ICC) to issue regulations banning segregation, and the ICC subsequently decreed that by November 1, 1961, bus carriers and terminals serving interstate travel had to be integrated.

As described above, the sites of these events contain objects of historic interest from a critical period of American history.

WHEREAS, section 320301 of title 54, United States Code (known as the "Antiquities Act"), authorizes the President, in his discretion, to declare by public proclamation historic landmarks, historic and prehistoric structures, and other objects of historic or scientific interest that are situated upon the lands owned or controlled by the Federal Government to be national monuments, and to reserve as a part thereof parcels of land, the limits of which shall be confined to the smallest area compatible with the proper care and management of the objects to be protected;

WHEREAS, the City of Anniston has donated to The Conservation Fund fee title to the former Greyhound bus station building in downtown Anniston, Alabama, approximately 0.17 acres of land;

WHEREAS, Calhoun County has donated to The Conservation Fund fee title to the site of the bus burning outside Anniston, Alabama, approximately 5.79 acres of land;

WHEREAS, The Conservation Fund has relinquished and conveyed all of these lands to the United States of America;

WHEREAS, it is in the public interest to preserve and protect the historic objects associated with the former Greyhound bus station in Anniston, Alabama, and the site of the bus burning outside Anniston in Calhoun County, Alabama;

NOW, THEREFORE, I, BARACK OBAMA, President of the United States of America, by the authority vested in me by section 320301 of title 54, United States Code, hereby proclaim the objects identified above that are situated upon lands and interests in lands owned or controlled by the Federal Government to be the Freedom Riders National Monument (monument) and, for the purpose of protecting those objects, reserve as a part thereof all lands and interests in lands owned or controlled by the Federal Government within the boundaries described on the accompanying map, which is attached to and forms a part of this proclamation. The reserved Federal lands and interests in lands encompass approximately 5.96 acres. The boundaries described on the accompanying map are confined to the smallest area compatible with the proper care and management of the objects to be protected.

All Federal lands and interests in lands within the boundaries described on the accompanying map are hereby appropriated and withdrawn from all forms of entry, location, selection, sale, or other disposition under the public land laws, from location, entry, and patent under the mining laws, and from disposition under all laws relating to mineral and geothermal leasing.

The establishment of the monument is subject to valid existing rights. If the Federal Government acquires any lands or interests in lands not owned or controlled by the Federal Government within the boundaries described on the accompanying map, such lands and interests in lands shall be reserved as a part of the monument, and objects identified above that are situated upon those lands and interests in lands shall be part of the monument, upon acquisition of ownership or control by the Federal Government.

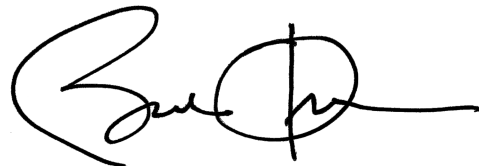

The Secretary of the Interior (Secretary) shall manage the monument through the National Park Service, pursuant to applicable legal authorities, consistent with the purposes and provisions of this proclamation. The Secretary shall use available authorities, as appropriate, to enter into agreements with others to address common interests and promote management needs and efficiencies.

The Secretary shall prepare a management plan, with full public involvement, within 3 years of the date of this proclamation. The management plan shall ensure that the monument fulfills the following purposes for the benefit of present and future generations: (1) to preserve and protect the objects of historic interest associated with the monument, and (2) to interpret the objects, resources, and values related to the civil rights movement. The management plan shall, among other things, set forth the desired relationship of the monument to other related resources, programs, and organizations, both within and outside the National Park System.

Nothing in this proclamation shall be deemed to revoke any existing withdrawal, reservation, or appropriation; however, the monument shall be the dominant reservation.

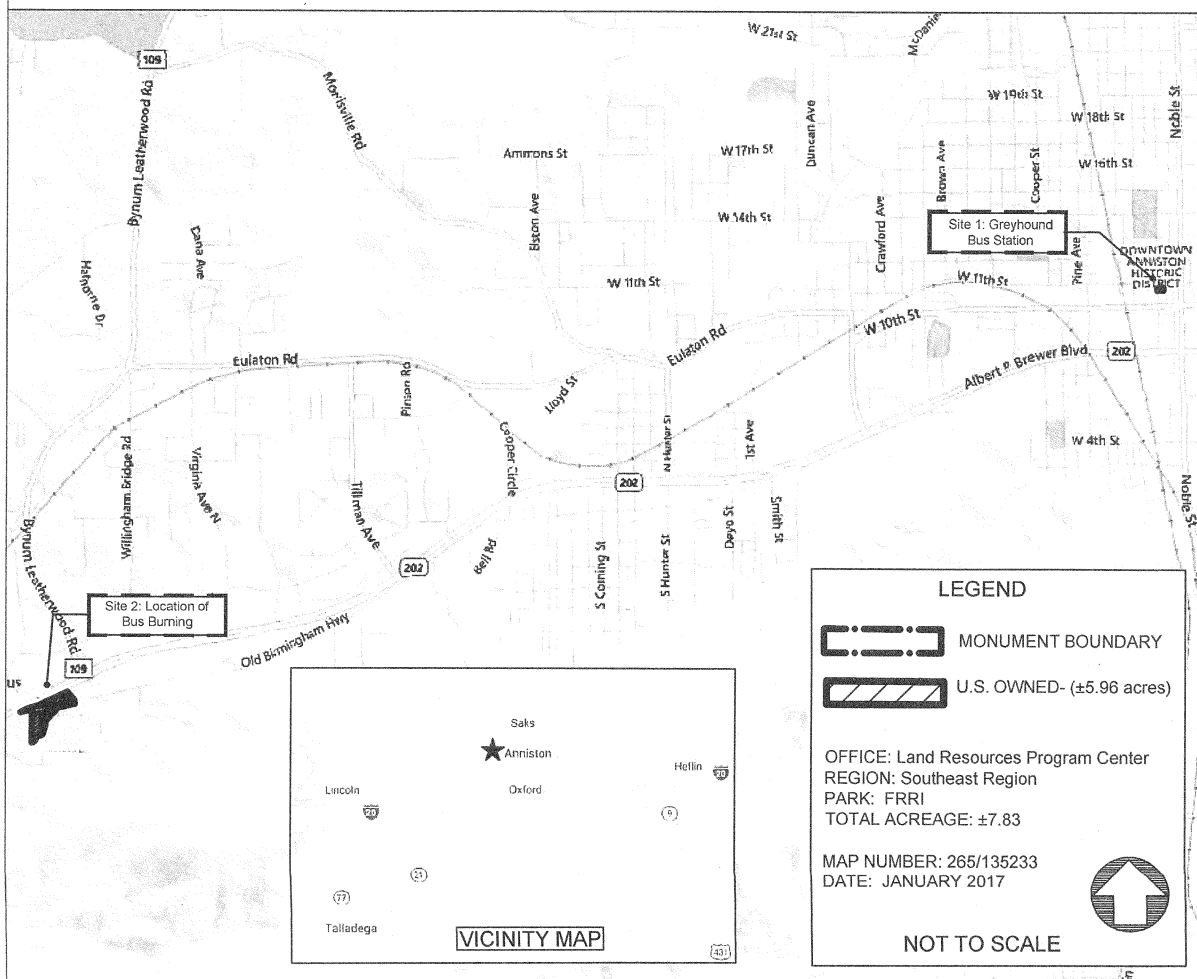

Warning is hereby given to all unauthorized persons not to appropriate, injure, destroy, or remove any feature of this monument and not to locate or settle upon any of the lands thereof.

IN WITNESS WHEREOF, I have hereunto set my hand this twelfth day of January, in the year of our Lord two thousand seventeen, and of the Independence of the United States of America the two hundred and forty-first.

A handwritten signature in black ink, appearing to be "Donald Trump", with a large circular flourish and a horizontal line extending to the right.

Notice of January 13, 2017

Continuation of the National Emergency With Respect to Terrorists Who Threaten To Disrupt the Middle East Peace Process

On January 23, 1995, by Executive Order 12947, the President declared a national emergency pursuant to the International Emergency Economic Powers Act (50 U.S.C. 1701–1706) to deal with the unusual and extraordinary threat to the national security, foreign policy, and economy of the United States constituted by grave acts of violence committed by foreign terrorists that disrupt the Middle East peace process. On August 20, 1998, by Executive Order 13099, the President modified the Annex to Executive Order 12947 to identify four additional persons who threaten to disrupt the Middle East peace process. On February 16, 2005, by Executive Order 13372, the President clarified the steps taken in Executive Order 12947.

These terrorist activities continue to threaten the Middle East peace process and to pose an unusual and extraordinary threat to the national security, foreign policy, and economy of the United States. For this reason, the national emergency declared on January 23, 1995, and the measures adopted to deal with that emergency must continue in effect beyond January 23, 2017. Therefore, in accordance with section 202(d) of the National Emergencies Act (50 U.S.C. 1622(d)), I am continuing for 1 year the national emergency with respect to foreign terrorists who threaten to disrupt the Middle East peace process.

This notice shall be published in the *Federal Register* and transmitted to the Congress.

THE WHITE HOUSE,
January 13, 2017.
